PROJECT DESCRIPTION: The project description should include (a) a description of the project site, (b) a description of both on-site and off-site alternatives and the impacts associated with each alternative, and (c) potential on-site and off-site mitigation measures for each alternative (*You may attach one additional page, if necessary.*)

Approximately two-thirds of the project would be built on flowed tidelands. Area listed does contain some soft-shelled clams, but the project location is not actively fished for shellfish and is listed as a "restricted" site by fisheries. The intertidal area contains mostly with sandy silt.

The pilings which will support the pier will create a small temporary impact upon marine life that inhabit or feed off the bottom, but we expect this to be a very temporary disruption.

There are no off-site alternatives readily available since the owners other businesses are already located at this location.
