PROJECT DESCRIPTION

The project site is located on the Coles River in Swansea, Massachusetts, locally known as the "spit". It is an elbow-shaped piece of land with the Coles River to the North and West, and Cedar Cove to the South and East.

The project consists of the installation of water and electric service to an existing, licensed dock, parking area, and driveway (D.E.P. license #3332). The purpose of this project is to provide electricity to the dock so we may install a light with a motion detector to deter theft and vandalism to the boats at the dock. There has been thousands of dollars worth of equipment stolen over the 32 years that my family has had boats tied to the dock. We feel we have a right to protect our property. At the suggestion of the local police department, we believe a light that will activate at the presence of motion and will shut off after ten minutes is the best way to prevent any further loss of very expensive equipment.

Alternatives to this proposal would be either generators, which would create excessive noise, disrupting neighbors and wildlife; or utility poles, which would take away from the natural beauty of the area. It is our belief that there will be no environmental impact on the surrounding area with our proposed project.

The installation of services is expected to take two days to complete. The project, as shown on enclosed Notice of Intent Plan, has been approved with an Order of Conditions by the Swansea Conservation Commission dated October 11, 2003.

Sincerely,

Raymond W. Howard III

Daymord W. Havard III
