# Immediate Response Action Plan

---

## 1.0 INTRODUCTION

On behalf of AVX Corporation (AVX), URS Corporation (URS) has prepared this *Immediate Response Action Plan* (IRA Plan) for the disposal site known as the former Aerovox Facility (Site) located at 740 Belleville Avenue in New Bedford, Massachusetts. The Release Tracking Number (RTN) for the Site and for the IRA is 4-0601. This IRA Plan is being submitted to address the presence of dense non-aqueous phase liquid (DNAPL) at a measured thickness greater than ½-inch in monitoring well MW-15D, a site condition that requires implementation of an IRA in accordance with the Massachusetts Contingency Plan (MCP), 310 CMR 40.0412

The Site assessment and remediation under Massachusetts General Law Chapter 21E and the MCP is subject to the Administrative Consent Order and Notice of Responsibility (ACO) between AVX and the Massachusetts Department of Environmental Protection (MassDEP) and the Massachusetts Office of the Attorney General, effective as of June 3, 2010 (ACO-SE-09-3P-016).

## 2.0 RELEVANT CONTACTS (310 CMR 40.0424(A))

The property is owned by the City of New Bedford, Massachusetts (the City). Contact information for the City's representative is as follows:

Ms. Michelle Paul  
Director of Environmental Stewardship  
City of New Bedford  
133 Williams Street, Room 304  
New Bedford, MA 02740  
Phone Number: 508-991-6188

The person assuming responsibility for conducting IRA activities is:

Mr. Evan Slavitt  
AVX Corporation  
801 17<sup>th</sup> Avenue South, P.O. Box 867  
Myrtle Beach, SC 29578  
Phone Number: 843-946-0614

The Licensed Site Professional (LSP) for the site is:

Ms. Marilyn Wade, LSP No. 4315  
URS Corporation  
1155 Elm Street, Suite 401  
Manchester, NH 03101  
Phone Number: 603-606-4824

# Immediate Response Action Plan

---

## 3.0 DISPOSAL SITE DESCRIPTION

### 3.1 SITE INFORMATION

The Disposal Site is located at 740 Belleville Avenue, Bristol County, New Bedford, Massachusetts. **Figure 1**, Site Location Plan, shows the Site location with respect to the surrounding topography and features. The coordinates of the Site (referenced to the corner of Belleville Avenue and Hadley Street) are latitude 41° 40' 25.12" N and longitude 70° 55' 13.84" W (UTM coordinates 340135.53m E and 4615326.34m N).

The Disposal Site at the time it was tier classified (and at the time the ACO became effective) was defined as the Aerovox property (Property) which encompasses approximately 10.3 acres and has the following boundaries:

- The northern boundary of the Property is the existing Aerovox northern property line which is located approximately in the middle of Graham Street, a private alley that lies between Aerovox and a factory operated by Precix, Inc.
- The southern boundary of the Property is the existing Aerovox southern property line which is located approximately in the middle of Hadley Street, a private street that lies between Aerovox and a factory operated by Acushnet Company (Titleist).
- The western boundary of the Property is the existing Aerovox western property line along Belleville Avenue, and
- The eastern boundary of the Property is the existing sheet pile wall (inclusive of the wall itself) running generally in a north-south orientation along the Acushnet River, and the line formed by the elevation of Mean High Water (MHW) where the sheet pile wall is not present.

The Property is currently a vacant, asphalt paved parking lot. The land surrounding the Property is used industrially to the south and north, and residentially to the west. The Acushnet River is immediately east of the Site. The Acushnet River and the area below MHW east of the Site is by definition the New Bedford Harbor Superfund Site, which is separate and distinct from the Disposal Site that is the subject of this IRA Plan.

### 3.2 SITE HISTORY

The Site formerly contained an approximately 450,000 square foot manufacturing building and associated ancillary buildings along with a parking lot located on industrially-zoned land. Originally constructed as a mill, the main building included a two story wing along Belleville Avenue and a three story wing across the north side of the Property adjacent to Graham Street. Ancillary structures included a brick sewer pump station and a brick boiler house that were located along the south side of the main manufacturing building, and a brick structure that housed electrical switching equipment that was located at the southwest corner of the main

# Immediate Response Action Plan

---

building. All above ground infrastructure on the Site was demolished and removed in 2011. All subsurface utilities were disconnected and filled in place, with the exception of the storm sewer system which drains the paved area, and the former septic sewer system which included a pump house vault and connecting line running to the City sewer system in Belleville Avenue. The vault was temporarily filled and covered, and the line capped and left in place. The Property has been capped with asphalt and the area that is not part of Hadley or Graham Street is secured by perimeter fencing.

## **4.0 DESCRIPTION OF THE RELEASE, SITE CONDITIONS, AND SURROUNDING RECEPTORS (310 CMR 40.0424(B))**

### **4.1 DESCRIPTION OF THE RELEASE**

Electrical component manufacturing began at the Site in approximately 1938. Beginning in the 1940s, use of dielectric fluid containing polychlorinated biphenyls (PCBs) in capacitor manufacturing started. It has been estimated that up to 100,000,000 pounds of PCBs were used at the Facility during Aerovox operations (EPA, 1997).

During a 1981 EPA compliance inspection of the Facility, “oil impregnated soil was observed in the culverts leading to and at both outfalls.” Culvert, as used here is believed to refer to the open drainage trenches that were formerly adjacent to the north and south sides of the building. In addition to the oily soils observed in the drainage trenches, stained soil was observed in the “backyard power substation” located between the former Aerovox building and the Acushnet River. Samples collected from the soils within the drainage ditches and in the former backyard power substation contained PCB concentrations of up to 24,000 parts per million (ppm). The backyard power substation was reportedly used for drum storage within the month prior to EPA’s collection of the samples.

In addition to the use of PCBs, Aerovox also utilized a trichloroethene (TCE) capacitor degreasing operation. Degreasing residues from the degreasing operation were stored in 55-gallon drums on a concrete floor with no secondary containment. A TCE aboveground storage tank (AST) was formerly located in the second floor of the building, just outside of the impregnation room. In addition, the TCE recovery system ASTs were located in the first floor of the building.

Operations and disposal practices involving the use of PCBs and solvents resulted in the release of hazardous substances which contributed to the contamination of soils, building materials and equipment, surface water runoff and groundwater at the Site. Inspections, assessments and sampling programs from the 1980s forward, undertaken by the former owner and operator Aerovox, Inc. as well as EPA, confirmed the presence of PCBs in soils under the concrete foundation, in soils outside the building and mixed into the asphalt parking lot, in groundwater, as well as throughout the interior of the building.

## Immediate Response Action Plan

---

Based on prior investigations and available reports dating back to 1983, known or presumed releases from past operations of the Facility include the following:

- Discharge of National Pollutant Discharge Elimination System water (including PCBs) to the former storm water discharge trenches located on the northern and southern side of the building (portions of which remain at the east end of the property to convey runoff from the cap);
- Contaminated soils located beneath the existing hydraulic asphalt concrete cap (from storage of drums containing wastes in this area);
- Leakage of stored virgin and waste PCB containing oils and TCE through cracks in the building foundations or ground surface;
- Possible overfills of virgin PCB containing oil and TCE to the ground surface on the northern side of the building during tank filling activities;
- Release of oil from two USTs formerly located on the south side of the building and associated contaminated soils that were not excavated due to structural concerns associated with the nitrogen cooling system pad and corrugated storm sewer;
- PCBs contained within the former parking lot asphalt;
- Infiltration of storm water formerly in contact with contaminated building materials; and
- PCB containing sediment within the catch basin/surface water runoff system.

None of these historic or potential sources is currently uncontrolled. No specific release mechanism or volume is documented; rather the release is presumed to be the result of the historic manufacturing of electrical components at the Facility over forty years of industrial activity. Releases most likely occurred from spills and improper storage of Oil and Hazardous Material (OHM). Releases to the environment including soil, groundwater, and the adjacent Acushnet River likely occurred through surface spills and through floor drains and stormwater outfall systems.

### **4.2 SITE CONDITIONS: PHASE II COMPREHENSIVE SITE ASSESSMENT SUMMARY**

Beginning in September 2013, URS initiated Phase II Comprehensive Site Assessment (Phase II) activities as part of the site investigation and cleanup under the MCP. Activities undertaken through March 2014 include a seismic refraction survey of the Site to evaluate and estimate the depth to bedrock and contour the bedrock surface beneath the Site; a Membrane Interface Probe (MIP) survey of the northern and eastern property lines to identify areas of elevated chlorinated volatile organic compounds (CVOCs), a geoprobe investigation laid out on a 100-foot by 100 – foot grid of the site to delineate the horizontal and vertical presence of contaminants of concern (COCs), installation of additional overburden and bedrock monitoring wells to evaluate groundwater contamination, monitoring well development, and monitoring well sampling. An overall description of the Phase II work conducted to date is provided below, along with a

# Immediate Response Action Plan

---

discussion of the results that are specific to the IRA condition that is the subject of this IRA Plan (i.e. the presence of DNAPL in monitoring well MW-15D).

## 4.2.1 Geophysical Investigation

In October 2013, Hager-Richter Geoscience, Inc. (Hager-Richter) completed a seismic refraction survey at the Site for the purpose of identifying and contouring the till surface and bedrock surface beneath the Site. Hager-Richter laid out a total of ten transect lines, identified as Seismic Line 1 through Seismic Line 10. Seismic lines 1 through 4 were East-West trending transects covering the areas of the Site between the building and Acushnet River. Seismic lines 5 through 10 were North-South transects between Graham Street and Hadley Street.

According to the Hager-Richter seismic refraction survey, the depth to competent bedrock beneath the Site ranged between 5-feet to 67-feet below the ground surface, ranging in elevation from approximately 4-feet to -62 feet relative to the North American Vertical Datum of 1988 (NAVD 88). In general, Hager-Richter identified that bedrock surface elevations were highest in the western end of the Site and deepest in the eastern end of the Site. Two bedrock knobs were identified along the southern and western boundaries of the Site. The bedrock surface is reportedly gently undulating in the western half of the Site, with a steep “V” shaped downward slope to a lower area (“terrace”) in the eastern end of the Site. In addition, a bowl-shaped depression in the bedrock was identified in the eastern third of the Site, south of the former building, and a triangular shaped depression was identified along the Acushnet River in the center of the Site. Subsequent subsurface Phase II work did not fully confirm the findings of the seismic refraction survey.

## 4.2.2 Membrane Interface Probe

A MIP investigation was conducted along the northern and eastern property boundaries in November 2013. The purpose of the MIP investigation was to identify the presence of CVOCs in the subsurface to aid in placement of groundwater monitoring wells. Two East-West transect lines were performed. These lines were placed parallel to the former northern drainage ditch, which ran the length of the three story section of the former Aerovox building. One transect line was conducted immediately adjacent to the former drainage ditch and the second line was located approximately 40 feet north of the ditch (within 30 feet of the Titleist building footprint). Two North-South MIP transects were conducted adjacent to the Acushnet River. The easternmost transect was completed just inside the Site perimeter fence, and the second North-South transect was completed approximately 30 to 40 feet west of the first North-South transect line. Refer to **Figure 2**, Site Plan for the MIP locations.

Pertinent to this IRA Plan, MIP locations in the northeast corner of the Site included MIP-13, MIP-14, MIP-15, MIP-16, and MIP-17. The XSD logs for these MIP locations suggest potential zones of CVOC impacts at depths of approximately 13-feet to 15-feet below the ground surface

## Immediate Response Action Plan

---

(bgs) at MIP-13, 22-feet to 22.5-feet bgs at MIP-14, 22-feet to 29.5-feet bgs at MIP-15, 17-feet to 27-feet bgs at MIP-16, and 21-feet to 29-feet bgs at MIP-17.

### 4.2.3 Geoprobe Investigation

In December 2013, URS completed a geoprobe investigation at the Site. The geoprobe borings were located in the field on a 100-foot by 100 foot grid. A total of four West-East transect lines (Identified as A through D) and ten North South transect lines (identified as 1 through 10) were laid out across the Site. Refer to **Figure 2** for the location of the geoprobe soil borings.

The objectives of the geoprobe investigation were four-fold: (1) delineate the extent of PCB concentrations in soils above the MCP Upper Concentration Limit (UCL) of 100 milligrams per kilogram (mg/kg), or ppm; (2) identify potential areas of DNAPL; (3) provide a check on the bedrock elevation contour identified by the seismic refraction survey, and (4) collect soil samples from MIP locations to correlate laboratory analytical data with the MIP detector readings.

Three geoprobe borings were advanced in the northeastern area of the Site, in the vicinity of well MW-15D: B10A, MIP-15, and MIP-43. These borings were advanced to refusal, which was estimated to be approximately 28-feet bgs, 30-feet bgs, and 20-feet bgs, respectively.

Observations noted in boring B10A included a naphthalene-like odor from 12-feet to 15-feet bgs and brown to black discoloration from 15-feet to 19-feet bgs. The highest photoionization detector (PID) reading (80 ppm) was detected in the 20-feet to 25-feet interval. A soil sample was collected from approximately 23-feet bgs and submitted for analysis of CVOCs and PCBs. Soils collected from intervals from the ground surface (0-feet) to 2-feet, 3-feet to 5-feet bgs, 8-feet to 10-feet bgs, and 17-feet to 18-feet bgs were submitted for PCB analysis, and a discrete sample collected at 23-feet bgs was submitted for PCB and CVOC analysis.

Observations noted in boring MIP-15 included petroleum odor from approximately 7-feet to 8-feet bgs and the presence of DNAPL within the 20-feet to 30-feet bgs depth interval. PID readings in the boring ranged from 1.5 ppm to greater than the instrument range (15,000 ppm). Soils collected from intervals from the ground surface (0-feet) to 2-feet, 8-feet, 8-feet to 10-feet bgs, 21.5-feet to 22.5-feet, 24-feet bgs, 26-feet bgs, and 28-feet to 30-feet bgs were submitted for PCB analysis, or PCB and CVOC analysis.

No visual impacts were observed in soils obtained during advancement of MIP-43. Soil samples were collected from MIP-43 at a depth of 0-feet bgs to 2-feet bgs, and at 4-feet bgs and submitted for analysis of PCBs, or PCBs and CVOCs. The sample from 4-feet bgs was chosen to correlate to an inferred background MIP signal.

Analytical results indicate that CVOC concentrations were below the MCP Method 1 S-1/GW-3 Standards in the soil sample collected from boring B10A at 23-feet bgs. Total PCBs were

## Immediate Response Action Plan

---

detected at levels above the MCP Method 1 S-1/GW-3 Standard at B10A in the 0-feet to 2-feet bgs, and the 3-feet to 5-feet bgs, intervals. Total PCBs in the 3-feet to 5-feet bgs interval exceeded the MCP UCL.

For boring location MIP-15, the reported concentrations of tetrachloroethene (PCE) and TCE in the sample collected from a depth of 24-feet bgs are above their corresponding MCP Method 1 S-1/GW-3 standard. The reported concentration of TCE is also above its corresponding MCP UCL. The total PCB concentrations in the MIP-15 soil samples, with the exception of those from the 8-foot depth and 8-10 feet depth interval exceeded the UCL for PCBs.

The CVOC concentrations in the sample from boring MIP-43 were below the Method 1 S-1/GW-3 Standards. PCB concentration in the ground surface (0-feet) to 2-feet interval exceeded the Method 1 S-1/GW-3 Standard. Refer to **Table 1** for a summary of the soil analytical data, **Figure 2** for the soil boring locations, and **Appendix A** for the soil boring logs. Supporting analytical reports are attached in **Appendix B**. (Note that although the presence of DNAPL in the northeast corner of the Site is the subject of this IRA Plan, the tabulated analytical results and laboratory reports provide the results for the entire Site.)

### 4.2.4 Monitoring Well Installation and Development

Based on interpretation of the MIP findings, and on geoprobe soil boring observations and analytical results, a monitoring well couplet was installed adjacent to the location of boring MIP-15, including a deep overburden (top of bedrock) monitoring well (MW-15D) and a bedrock monitoring well (MW-15B). The monitoring wells were installed using 6-inch temporary casing. Soil samples were collected continuously down to bedrock using a split-spoon sampler. The 6-inch casing was driven into the peat layer and then flushed using drive and wash drilling techniques. This was followed by 5-inch temporary casing telescoped into the 6-inch casing. The casing was flushed out to the bedrock surface using drive and wash drilling techniques. The bedrock monitoring well was advanced into the bedrock using a 4-inch roller bit to create a socket to seat the permanent 4-inch casing in competent bedrock. The 4-inch casing was grouted into place at a depth of 36-feet bgs, and the grout was allowed to set for a period greater than 24 hours. Ten feet of 2-inch bedrock core was collected prior to enlarging the borehole with a 4-inch roller bit. The bedrock monitoring well was then constructed with a 10-foot length of 2-inch Schedule 40 slotted PVC and 36-feet of 2-inch riser pipe. The borehole for the deep overburden monitoring well was advanced to the bedrock surface using similar drilling techniques as the bedrock well, and monitoring well MW-15D was set over the bedrock surface.

Two soil samples were collected from the boring for well MW-15D at depths of 20-feet to 22-feet bgs and 26-feet to 28-feet bgs, and were submitted for laboratory analysis of CVOCs and PCBs. Analytical data for the 26-feet to 28-feet sample indicates that the 1,2,4-trichlorobenzene, PCE and cis-1,2-dichloroethene concentrations exceed their respective Method 1 S-1/GW-1 Standard, and the TCE concentration exceeded the UCL. Total PCB concentrations in both

## Immediate Response Action Plan

---

samples exceed the UCL. Refer to **Table 1** for a summary of the soil analytical data from the well installation activities and **Figure 2** for the monitoring well locations.

The monitoring wells were developed after a minimum of 48-hours after installation was completed. During well development activities in February 2014, evidence of the potential for DNAPL in MW-15B and MW-15D was observed, but DNAPL thickness could not be measured during well development. Refer to **Appendix A** for copies of the boring/well logs and **Appendix C** for copies of the well development logs.

### *Bedrock Elevation*

Based on the URS geoprobe investigation and subsequent monitoring well installation activities, the lowest elevation of the bedrock surface was identified as approximately -38.6 feet msl. The bowl-shaped bedrock depression and depth identified by the seismic refraction survey does not appear to be present.

### **4.2.5 Groundwater Sampling**

URS sampled all existing and newly installed monitoring wells on the Site and on the Precix property (abutting the Site to the north) in March 2014. Prior to sampling, all of the wells were gauged for depth to groundwater and the presence of non-aqueous phase liquids (NAPL). Approximately 6.5-inches of DNAPL was observed at the bottom of monitoring well MW-15D, as measured using the weighted string test. A sample of the DNAPL was collected and submitted for laboratory analysis of PCB and TCE content. Samples were collected from each of the Site and Precix monitoring wells and submitted for analysis for CVOCs, PCBs and total suspended solids.

The DNAPL sample collected from MW-15D was reported to contain 24,000 mg/kg TCE, 13,000 mg/kg PCE, 15,000 mg/kg cis,1-2-dichloroethene, 12,000 mg/kg 1,2,4-trichlorobenzene, 400 mg/kg 1,4-dichlorobenzene, and 666 mg/kg PCBs. Detectable dissolved-phase concentrations of CVOCs in the samples collected from MW-15D and MWM-15B included TCE, PCE, cis-1,2-dichloroethene, and vinyl chloride. The TCE concentration in MW-15B exceeds the UCL. The concentrations of the other detected CVOCs were reported to be below the Method 1 GW-3 Standard. The concentration of total PCBs detected at both MW-15D and MW-15B exceeded the Method 1 GW-3 Standard, but were below the UCL. Refer to **Table 2** for a summary of the groundwater analytical data and **Appendix B** for supporting analytical reports (Note that although the presence of DNAPL in the northeast corner of the Site is the subject of this IRA Plan, the tabulated analytical results and laboratory reports provide the results for the entire Site).

# Immediate Response Action Plan

---

## 4.2.6 MassDEP Notification

On April 10, 2014, URS notified MassDEP of the presence of DNAPL at a thickness of greater than 0.5-inch per 310 CMR 40.0313(1). MassDEP provided URS with verbal authorization to conduct an IRA consisting of assessment actions pursuant to the MCP, 310 CMR 40.0414(1) including assessment of the extent and recoverability of DNAPL in the vicinity of MW-15D and removal actions pursuant to the MCP 310 CMR 40.0414(2) including utilizing low-energy methods (bailing) to remove DNAPL from MW-15D and from any newly installed monitoring wells that exhibit DNAPL thickness greater than ½ inch.

## 4.3 POTENTIAL SURROUNDING RECEPTORS

Relative to the Site as a whole, under current conditions, potential human exposure to Site related COCs is limited to the potential for direct contact with unpaved surface soils south of the Property on the adjacent Acushnet (Titleist) owned area, and the potential for vapor intrusion of COCs present beneath the Precix building north of the Property. Direct contact by employees and trespassers on the Titleist property is presently controlled by security fencing and temporary gravel access roads. Exposure by Precix employees through vapor intrusion is being assessed as part of the Phase II, and indoor air sampling to date has not shown impacts to indoor air above MassDEP commercial/industrial indoor air screening levels. Direct contact by human or ecological receptors with impacted soils and groundwater within the Property itself is eliminated by the presence of the asphalt cap. The small area of the Property in the northwest corner that is not paved is outside the fence and has been converted to a small park. However, sampling in this area has not identified COCs above laboratory detection limits. The Site is served by municipal water and sewer, and groundwater is not a drinking water source. A deed restriction is in place that prohibits the use of Site groundwater. Relative to the DNAPL that is the subject of this IRA Plan, there is no complete pathway for human receptors to be exposed to the DNAPL which is present more than 35 feet below the ground surface.

Potential off-site ecological receptors are limited to those species that may come in contact with COCs through the Acushnet River. Potential off-site receptors related to the Acushnet River are being addressed under the separate New Bedford Harbor Superfund Site and are not part of the MCP response actions. However, source control and/or management of migration of COCs from the Site to the river will be part of the MCP response actions and will be assessed in conjunction with this IRA.

## 5.0 IMMEDIATE RESPONSE ACTIONS UNDERTAKEN TO DATE (310 CMR 40.0424(C))

Immediate Response Actions taken to date have included gauging of deep overburden monitoring wells on the eastern end of the Site and a DNAPL baildown test.

## Immediate Response Action Plan

---

On April 22, 2014, URS measured the depth to groundwater and gauged for the presence of DNAPL in the deep overburden and bedrock monitoring wells on the east end of the site, including MW-6B, MW-17D, MW-17B, MW-2B, MW-7B, MW-15B and MW-15D. During that event, MW-15D contained a DNAPL thickness of 0.32 feet (4-inches).

On May 19, 2014, URS mobilized to the Site to complete a DNAPL baildown test on monitoring well MW-15D to evaluate the rate at which DNAPL returned to the monitoring well when removed. Upon arrival at the site, MW-15D contained 7-inches of DNAPL and MW-15B contained a trace amount of DNAPL (weighted string showed sign of DNAPL presence, but was not saturated).

The DNAPL was pumped from the monitoring well using a peristaltic pump. Upon removal of as much DNAPL as possible (less than 0.25-gallons), the peristaltic pump tubing was removed from the monitoring well. URS then measured DNAPL thickness in the well every 15 minutes for the first 75 minutes after DNAPL removal ceased. The interval was then increased to 30 minutes and eventually one-hour intervals. A final measurement was taken the following day. Measurements collected are summarized in the table below:

| Date   | Time  | Elapsed Time (Hours:Minutes) | DNAPL Thickness (inches) |
|--------|-------|------------------------------|--------------------------|
| 052014 | 10:15 | 0                            | 0                        |
| 052014 | 10:30 | 0:15                         | <1                       |
| 052014 | 10:45 | 0:30                         | 2                        |
| 052014 | 11:00 | 0:45                         | 2                        |
| 052014 | 11:15 | 1:00                         | 2.5                      |
| 052014 | 11:30 | 1:15                         | 2.5                      |
| 052014 | 12:00 | 1:45                         | 2.5                      |
| 052014 | 12:30 | 2:15                         | 3                        |
| 052014 | 13:00 | 2:45                         | 3                        |
| 052014 | 13:30 | 3:15                         | 3.25                     |
| 052014 | 14:00 | 3:45                         | 3.25                     |
| 052014 | 15:00 | 4:45                         | 3.25                     |
| 052014 | 16:00 | 5:45                         | 3.25                     |
| 052114 | 19:30 | 21:15                        | 3.25                     |

### 6.0 OBJECTIVES, SCOPE AND SCHEDULE OF IMMEDIATE RESPONSE ACTION (310 CMR 40.0424(C))

The current objectives of the IRA are to remove DNAPL from MW-15D in the short term, to delineate the extent the DNAPL in the subsurface, and to design, install and operate a DNAPL

# Immediate Response Action Plan

---

recovery system for the interim period between now and implementation of the final remedy for the Site.

## 6.1 SHORT-TERM DNAPL REMOVAL FROM MW-15D

DNAPL will be gauged in monitoring well MW-15D and MW-15B every other week. After gauging, the DNAPL, if present, will be removed using a peristaltic pump. The DNAPL will be placed into a covered 5-gallon pail for storage. The 5-gallon pail will be placed into a 55-gallon drum stored inside the temporary drum storage unit (with integral secondary containment) at the Site. Since the DNAPL is considered Remediation Waste (per 310 CMR 40.0006), and given the analytical results reported for the DNAPL sample, URS will assume the collected DNAPL would meet the criteria defining a listed or characteristic waste, and will manage it for disposal every 90 days in accordance with 310 CMR 40.0031(7).

## 6.2 DNAPL DELINEATION

DNAPL delineation activities will begin with a MIP investigation in the vicinity of well cluster MW-15. The objective of the MIP investigation is to identify subsurface areas with elevated concentrations of chlorinated organic compounds. The MIP borings (up to 14 locations) will generally be located radially out in three directions from MW-15D (additional borings to the east are limited by the river boundary) and will be advanced to the depth of the inferred bedrock surface.

Based on evaluation of the MIP data, up to 8 geoprobe borings will be advanced to the inferred bedrock surface. The soil borings will be advanced to characterize soils, collect PID headspace readings of soils, make visual observations of soils to identify potential DNAPL saturated soils, further evaluate the bedrock surface configuration in the vicinity of MW-15D, and to evaluate potential DNAPL recovery well locations, if needed based on findings of the assessment. **Figure 3** presents the approximate locations for the proposed MIP and geoprobe borings. Final locations will be determined in the field based on conditions encountered during installation.

## 7.0 REASON WHY IRA IS REQUIRED (310 CMR 40.042(D))

In accordance with 310 CMR 40.0412(1), IRA activities are required to be conducted at Sites where a 72-hour reportable condition has been identified. The presence of DNAPL at a thickness of greater than 0.5-inch represents a 72-hour notification per 310 CMR 40.0313(1). Therefore, this IRA is required to address the DNAPL observed in monitoring well MW-15D.

## 7.1 CONDITION OF SUBSTANTIAL RELEASE MIGRATION EVALUATION

Pursuant to 310 CMR 40.0006 of the MCP, the following conditions constitute a Condition of Substantial Release Migration (SRM):

## Immediate Response Action Plan

---

- a) Releases that have resulted in the discharge of separate phase OHM to surface waters, subsurface structures, or underground utilities or conduits;
- b) Releases to the groundwater or to the vadose zone that, if not promptly removed or contained, are likely to significantly impact the underlying groundwater, or significantly exacerbate an existing condition of groundwater pollution;
- c) Releases to the groundwater that have migrated or are expected to migrate more than 200 feet per year;
- d) Releases to the groundwater that have been or are within one year likely to be detected in a private or public drinking water supply well;
- e) Releases to the groundwater that have been or are within one year likely to be detected in a surface water body, wetland or public water supply reservoir;
- f) Releases to the groundwater that have resulted or are within one year likely to result in the discharge of vapors into school buildings or occupied residential dwellings.

Site conditions are not known to have resulted in discharge of separate phase OHM to surface waters, subsurface structures, or underground utilities. Subsurface assessment work (borings) previously undertaken by EPA in conjunction with planning for dredging impacted sediments immediately off shore from the Site has indicated the potential for DNAPL to be present in soils below the river bottom, but DNAPL has not been measured there. Prior dredging in the near shore area immediately adjacent to the Site by EPA has produced sediment impacted with both PCBs and CVOCs. However, the abutting Acushnet River is being addressed as part of the New Bedford Harbor Superfund Site. As a result, although one of the SRM conditions has been met (COCs in Site groundwater have been detected in sediment and soils beneath the river), this IRA condition is not considered an SRM. None of the other SRM conditions apply.

### 7.2 CRITICAL EXPOSURE PATHWAY EVALUATION

A Critical Exposure Pathway (CEP) is defined in 310 CMR 40.0006 as the routes by which oil and/or hazardous materials released at a Disposal Site are transported, or are likely to be transported, to human receptors via:

- a) Vapor-phase emissions of measurable concentrations of OHM into the living or working spaces of a pre-school, daycare, school or occupied residential dwelling; or
- b) Ingestion, dermal absorption or inhalation of measurable concentrations of OHM in the private drinking water supply wells located at and servicing a pre-school, daycare, school or occupied residential dwelling;

The measurement of DNAPL on this currently vacant, undeveloped property does not constitute a CEP.

# Immediate Response Action Plan

---

## 7.3 IMMINENT HAZARD EVALUATION

An Imminent Hazard Evaluation shall be performed as part of an IRA at sites where a release or threat of release could pose an Imminent Hazard to human health, safety, public welfare, or the environment, as described in 310 CMR 40.0321(2), and may be performed at sites where a release or threat of release is deemed to pose an Imminent Hazard, as described in 310 CMR 40.0321(1).

The following releases shall be deemed to pose an Imminent Hazard to health, safety, public welfare, and/or the environment as defined in 310 CMR 321(2):

- a) a release to the environment which results in the presence of oil and/or hazardous material vapors within buildings, structures, or underground utility conduits at a concentration equal to or greater than 10% of the Lower Explosive Limit;
- b) a release to the environment of reactive or explosive hazardous material, as described in 310 CMR 40.0347, which threatens human health or safety;
- c) a release to a roadway that endangers public safety;
- d) a release to the environment of oil and/or hazardous material which poses a significant risk to human health when present for even a short period of time, as specified in 310 CMR 40.0950;
- e) a release to the environment of oil and/or hazardous material which produces immediate or acute adverse impacts to freshwater or saltwater fish populations; or
- f) a release to the environment which produces readily apparent effects to human health, including respiratory distress or dermal irritation.

None of the above conditions apply to the DNAPL measured in MW-15D. Furthermore, conditions in the Acushnet River are being managed separate from the Aerovox response actions through the New Bedford Harbor Superfund Site remediation.

## 7.4 CHARACTERIZATION OF RISK TO SAFETY

A level of No Significant Risk to safety exists or has been achieved if the conditions at the Disposal Site which are related to the release of OHM do not currently and will not on the foreseeable future pose a threat of physical harm or bodily injury to people. Such release-related conditions may include, but are not limited to:

- a) the presence of rusted or corroded drums or containers, open pits, lagoons or other dangerous structures;
- b) any threat of fire or explosion, including the presence of explosive vapors resulting from a release of oil and/or hazardous material; and

## **Immediate Response Action Plan**

---

- c) any uncontained materials which exhibit the characteristics of corrosivity, reactivity or flammability described at 310 CMR 40.0347.

None of the above conditions related to the release existed at the Site. Therefore, there is No Significant Risk to Safety.

### **8.0 MANAGEMENT OF REMEDIATION WASTE (310 CMR 40.0424(F))**

DNAPL, contaminated soil, and contaminated personal protective equipment (PPE) are anticipated to be generated during IRA activities. The DNAPL generated from recovery activities will be placed into a covered 5-gallon pail for storage. The 5-gallon pail will be placed into a 55-gallon drum stored in the temporary drum storage unit (with integral secondary containment). Contaminated soil and PPE will also be placed temporarily in 55-gallon drums within the drum storage unit. Since these materials are considered remediation waste (310 CMR 40.0006), they will be properly disposed offsite within 90 days of the accumulation start date.

### **9.0 ENVIRONMENTAL MONITORING PLAN (310 CMR 40.0424(G))**

Bi-weekly gauging of DNAPL thickness in monitoring well MW-15D will be conducted for at least two months. Depending upon observations of DNAPL return to the monitoring well between gauging rounds, the frequency of DNAPL removal events may be increased or decreased. If a change to the frequency is needed, a modification to this schedule will be included in one of the IRA Status Reports.

### **10.0 FEDERAL, STATE AND LOCAL PERMITS REQUIRED FOR IMMEDIATE RESPONSE ACTIONS (310 CMR 40.0424(H))**

Other than a Digsafe Ticket ID number and potential soil transportation and disposal requirements, federal, state or local permits, no other permits are anticipated to be required for completion of these IRA activities.

### **11.0 OTHER RELATED INFORMATION**

Pursuant to the Administrative Settlement Agreement and Order on Consent for Non-Time Critical Removal Action (AOC) between AVX and the EPA, effective June 3, 2010, a Monitoring and Maintenance (MM) Plan for the Aerovox Site was prepared by URS for AVX in fulfillment of Sections III.H.4. and III.I. of the Non-Time Critical Removal Action Scope of Work, Appendix B to the AOC. The MM Plan was also prepared in accordance with the Action Memorandum for the Site, issued by EPA on December 23, 2009, and the Toxic Substances Control Act Determination. The MM Plan describes who will be doing monitoring and maintenance for the cap and sheet pile wall, what monitoring and maintenance is required, when

## **Immediate Response Action Plan**

---

monitoring and maintenance will be performed, and in general terms how monitoring and maintenance will be conducted.

One of the requirements of the MM Plan is that the cap and containment barrier (sheet pile wall along the east end of the Property) be inspected each year in late spring to assess for winter damage, weed growth and potential for underlying soils to be exposed or to become exposed in the coming year. Documentation of this inspection is required to be submitted to MassDEP as part of the next regular 21E/MCP submittal. The Spring 2014 inspection occurred on May 8, 2014 with MassDEP, EPA, and URS in attendance. A copy of the inspection report is attached to this submittal as **Appendix D**.

**Notes:**  
(ug/kg) = Micrograms per kilogram  
(ft bgs) = Feet below ground surface  
U = Constituent not detected at listed reporting limit  
E = Concentration exceeds instrument calibration  
ND = Not Detected  
-- = Not analyzed for this constituent  
Sample collection depth in feet below ground surface  
noted in parenthesis in Sample ID  
NE = Not Established  
Total PCBs calculated by summing detected concentrations  
MCP = Massachusetts Contingency Plan  
S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
UCL = MCP Method 3 Soil Upper Concentration Limit  
[ ] and shaded value indicates concentration is above UCL  
The S-1 standards are shown for informational purposes only,  
because a Method 3 Risk Characterization will be completed

**Notes:**  
 (ug/kg) = Micrograms per kilogram  
 (ft bgs) = Feet below ground surface  
 U = Constituent not detected at listed reporting limit  
 E = Concentration exceeds instrument calibration  
 ND = Not Detected  
 -- = Not analyzed for this constituent  
 Sample collection depth in feet below ground surface  
     noted in parenthesis in Sample ID  
 NE = Not Established  
 Total PCBs calculated by summing detected concentrations  
 MCP = Massachusetts Contingency Plan  
 S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
 S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
 UCL = MCP Method 3 Soil

**Notes:**  
(ug/kg) = Micrograms per kilogram  
(ft bgs) = Feet below ground surface  
U = Constituent not detected at listed reporting limit  
E = Concentration exceeds instrument calibration  
ND = Not Detected  
-- = Not analyzed for this constituent  
Sample collection depth in feet below ground surface noted in parenthesis in Sample ID  
NE = Not Established  
Total PCBs calculated by summing detected concentrations  
MCP = Massachusetts Contingency Plan  
S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
UCL = MCP Method 3 Soil Upper Concentration Limit  
[ ] and shaded value indicates concentration is above UCL  
The S-1 standards are shown for informational purposes only, because a Method 3 Risk Characterization will be completed

**Notes:**  
 (ug/kg) = Micrograms per kilogram  
 (ft bgs) = Feet below ground surface  
 U = Constituent not detected at listed reporting limit  
 E = Concentration exceeds instrument calibration  
 ND = Not Detected  
 -- = Not analyzed for this constituent  
 Sample collection depth in feet below ground surface  
 noted in parenthesis in Sample ID  
 NE = Not Established  
 Total PCBs calculated by summing detected concentrations  
 MCP = Massachusetts Contingency Plan  
 S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
 S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
 UCL = MCP Method 3 Soil Upper Concentration Limit  
 [ ] and shaded value indicates concentration is above UCL  
 The S-1 standards are shown for informational purposes only,  
 because a Method 3 Risk Characterization will be completed

**Notes:**  
(ug/kg) = Micrograms per kilogram  
(ft bgs) = Feet below ground surface  
U = Constituent not detected at listed reporting limit  
E = Concentration exceeds instrument calibration  
ND = Not Detected  
-- = Not analyzed for this constituent  
Sample collection depth in feet below ground surface noted in parenthesis in Sample ID  
NE = Not Established  
Total PCBs calculated by summing detected concentrations  
MCP = Massachusetts Contingency Plan  
S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
UCL = MCP Method 3 Soil Upper Concentration Limit  
[ ] and shaded value indicates concentration is above UCL  
The S-1 standards are shown for

**Notes:**  
 (ug/kg) = Micrograms per kilogram  
 (ft bgs) = Feet below ground surface  
 U = Constituent not detected at listed reporting limit  
 E = Concentration exceeds instrument calibration  
 ND = Not Detected  
 -- = Not analyzed for this constituent  
 Sample collection depth in feet below ground surface  
 noted in parenthesis in Sample ID  
 NE = Not Established  
 Total PCBs calculated by summing detected concentrations  
 MCP = Massachusetts Contingency Plan  
 S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
 S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
 UCL = MCP Method 3 Soil Upper Concentration Limit  
 [ ] and shaded value indicates concentration is above UCL  
 The S-1 standards are shown for informational purposes only,  
 because a Method 3 Risk Characterization will be completed

**Notes:**  
(ug/kg) = Micrograms per kilogram  
(ft bgs) = Feet below ground surface  
U = Constituent not detected at listed reporting limit  
E = Concentration exceeds instrument calibration  
ND = Not Detected  
-- = Not analyzed for this constituent  
Sample collection depth in feet below ground surface  
noted in parenthesis in Sample ID  
NE = Not Established  
Total PCBs calculated by summing detected concentrations  
MCP = Massachusetts Contingency Plan  
S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
UCL = MCP Method 3 Soil Upper Concentration Limit  
[ ] and shaded value indicates concentration is above UCL  
The S-1 standards are shown for informational purposes only,  
because a Method 3 Risk Characterization will be completed

**Notes:**  
(ug/kg) = Micrograms per kilogram  
(ft bgs) = Feet below ground surface  
U = Constituent not detected at listed reporting limit  
E = Concentration exceeds instrument calibration  
ND = Not Detected  
-- = Not analyzed for this constituent  
Sample collection depth in feet below ground surface  
noted in parenthesis in Sample ID  
NE = Not Established  
Total PCBs calculated by summing detected concentrations  
MCP = Massachusetts Contingency Plan  
S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
UCL = MCP Method 3 Soil Upper Concentration Limit  
[ ] and shaded value indicates concentration is above UCL  
The S-1 standards are shown for informational purposes only,  
because a Method 3 Risk Characterization will be completed

| Total PCBs  | (ug/kg) | 1000       | 1000       | 100000              | N D  | 1080.                                       | N D   | N D   | N D                                       | N D  |

**Notes:**  
 (ug/kg) = Micrograms per kilogram  
 (ft bgs) = Feet below ground surface  
 U = Constituent not detected at listed reporting limit  
 E = Concentration exceeds instrument calibration  
 ND = Not Detected  
 -- = Not analyzed for this constituent  
 Sample collection depth in feet below ground surface  
     noted in parenthesis in Sample ID  
 NE = Not Established  
 Total PCBs calculated by summing detected concentrations  
 MCP = Massachusetts Contingency Plan  
 S1/GW3 = MCP Method 1 Soil Category S-1 in a GW-3 Area Soil Standards  
 S1/GW2 = MCP Method 1 Soil Category S-1 in a GW-2 Area Soil Standards  
 UCL = MCP Method 3 Soil Upper Concentration Limit  
 [ ] and shaded value indicates concentration is above UCL  
 The S-1 standards are shown for informational purposes only,  
 because a Method 3 Risk Characterization will be completed

**Notes:**  
 (ug/l) = Micrograms per liter  
 (mg/l) = Milligrams per liter  
 U = Constituent not detected at listed detection limit  
 J = Estimated concentration  
 ND = Not detected  
 NE = Not established  
 -- = Not analyzed for this constituent  
 Yellow shading indicates well is on Precix property  
 Bold and blue shaded value indicates concentration is above Method 1 GW-3 standard  
 Bold and green shaded value indicates concentration is above Method 1 GW-2 standard\*  
 Bold and orange shaded value indicates concentration is above UCL  
 \*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S  
 Total PCBs calculated by: summing detected concentrations and  
 50% of laboratory reporting limit for those PCBs historically detected in  
 groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242,  
 Aroclor 1248, Aroclor 1254 and Aroclor 1260)  
 Total CVOCs calculated by: summing detected concentrations  
 MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards  
 MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

**Notes:**  
 (ug/l) = Micrograms per liter  
 (mg/l) = Milligrams per liter  
 U = Constituent not detected at listed detection limit  
 J = Estimated concentration  
 ND = Not detected  
 NE = Not established  
 -- = Not analyzed for this constituent  
 Yellow shading indicates well is on Precix property  
 Bold and blue shaded value indicates concentration is above Method 1 GW-3 standard  
 Bold and green shaded value indicates concentration is above Method 1 GW-2 standard\*  
 Bold and orange shaded value indicates concentration is above UCL  
 \*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S  
 Total PCBs calculated by: summing detected concentrations and  
 50% of laboratory reporting limit for those PCBs historically detected in  
 groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242,  
 Aroclor 1248, Aroclor 1254 and Aroclor 1260)  
 Total CVOCs calculated by: summing detected concentrations  
 MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards  
 MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

**Notes:**  
 (ug/l) = Micrograms per liter  
 (mg/l) = Milligrams per liter  
 U = Constituent not detected at listed detection limit  
 J = Estimated concentration  
 ND = Not detected  
 NE = Not established  
 -- = Not analyzed for this constituent  
 Yellow shading indicates well is on Precix property  
 Bold and blue shaded value indicates concentration is above Method 1 GW-3 standard  
 Bold and green shaded value indicates concentration is above Method 1 GW-2 standard\*  
 Bold and orange shaded value indicates concentration is above UCL  
 \*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S  
 Total PCBs calculated by: summing detected concentrations and  
 50% of laboratory reporting limit for those PCBs historically detected in  
 groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242,  
 Aroclor 1248, Aroclor 1254 and Aroclor 1260)  
 Total CVOCs calculated by: summing detected concentrations  
 MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards  
 MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

**Notes:**  
 (ug/l) = Micrograms per liter  
 (mg/l) = Milligrams per liter  
 U = Constituent not detected at listed detection limit  
 J = Estimated concentration  
 ND = Not detected  
 NE = Not established  
 -- = Not analyzed for this constituent  
 Yellow shading indicates well is on Precip property  
 Bold and blue shaded value indicates concentration is above Method 1 GW-3 standard  
 Bold and green shaded value indicates concentration is above Method 1 GW-2 standard\*  
 Bold and orange shaded value indicates concentration is above UCL  
 \*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S  
 Total PCBs calculated by: summing detected concentrations and  
 50% of laboratory reporting limit for those PCBs historically detected in  
 groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242,  
 Aroclor 1248, Aroclor 1254 and Aroclor 1260)  
 Total CVOCs calculated by: summing detected concentrations  
 MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards  
 MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

**Notes:**  
 (ug/l) = Micrograms per liter  
 (mg/l) = Milligrams per liter  
 U = Constituent not detected at listed detection limit  
 J = Estimated concentration  
 ND = Not detected  
 NE = Not established  
 -- = Not analyzed for this constituent  
 Yellow shading indicates well is on Precix property  
 Bold and blue shaded value indicates concentration is above Method 1 GW-3 standard  
 Bold and green shaded value indicates concentration is above Method 1 GW-2 standard\*  
 Bold and orange shaded value indicates concentration is above UCL  
 \*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S  
 Total PCBs calculated by: summing detected concentrations and  
 50% of laboratory reporting limit for those PCBs historically detected in  
 groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242,  
 Aroclor 1248, Aroclor 1254 and Aroclor 1260)  
 Total CVOCs calculated by: summing detected concentrations  
 MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards  
 MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

| Solids, Total Suspended              | (mg/l) | NE       | NE       | NE                         | 5.0 U                                    | 5.0 U                                    | 34.  |

**Notes:**

(ug/l) = Micrograms per liter

(mg/l) = Milligrams per liter

U = Constituent not detected at listed detection limit

J = Estimated concentration

ND = Not detected

NE = Not established

-- = Not analyzed for this constituent

**Yellow** shading indicates well is on Precix property

**Bold and blue shaded** value indicates concentration is above Method 1 GW-3 standard

**Bold and green shaded** value indicates concentration is above Method 1 GW-2 standard\*

**Bold and orange shaded** value indicates concentration is above UCL

\*MCP GW-2 standards only apply to wells MW-4S, MW-16S, and MW-18S

Total PCBs calculated by: summing detected concentrations and

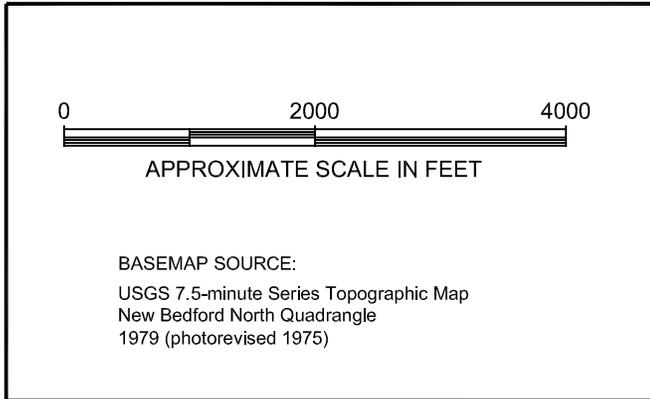

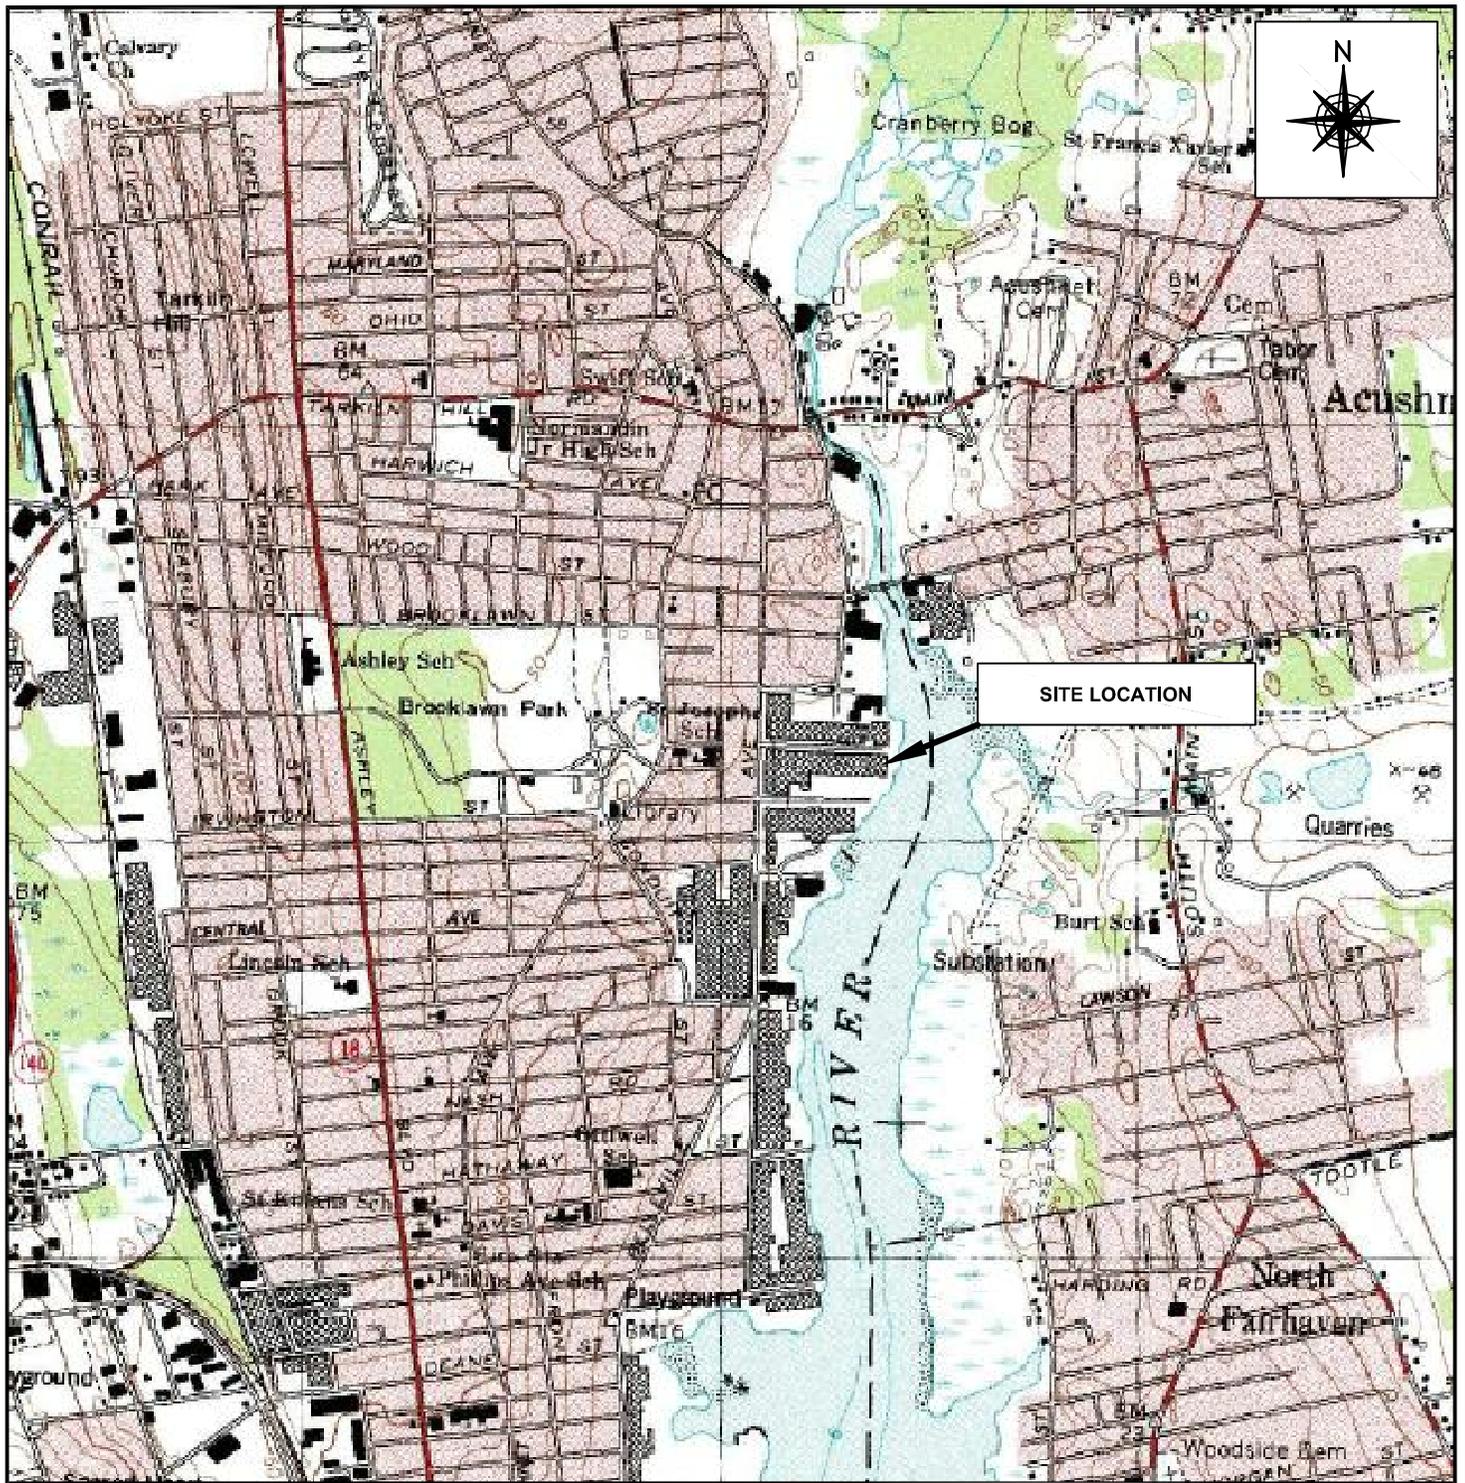

50% of laboratory reporting limit for those PCBs historically detected in groundwater at the site (i.e., Aroclor 1016, Aroclor 1221, Aroclor 1232, Aroclor 1242, Aroclor 1248, Aroclor 1254 and Aroclor 1260)

Total CVOCs calculated by: summing detected concentrations

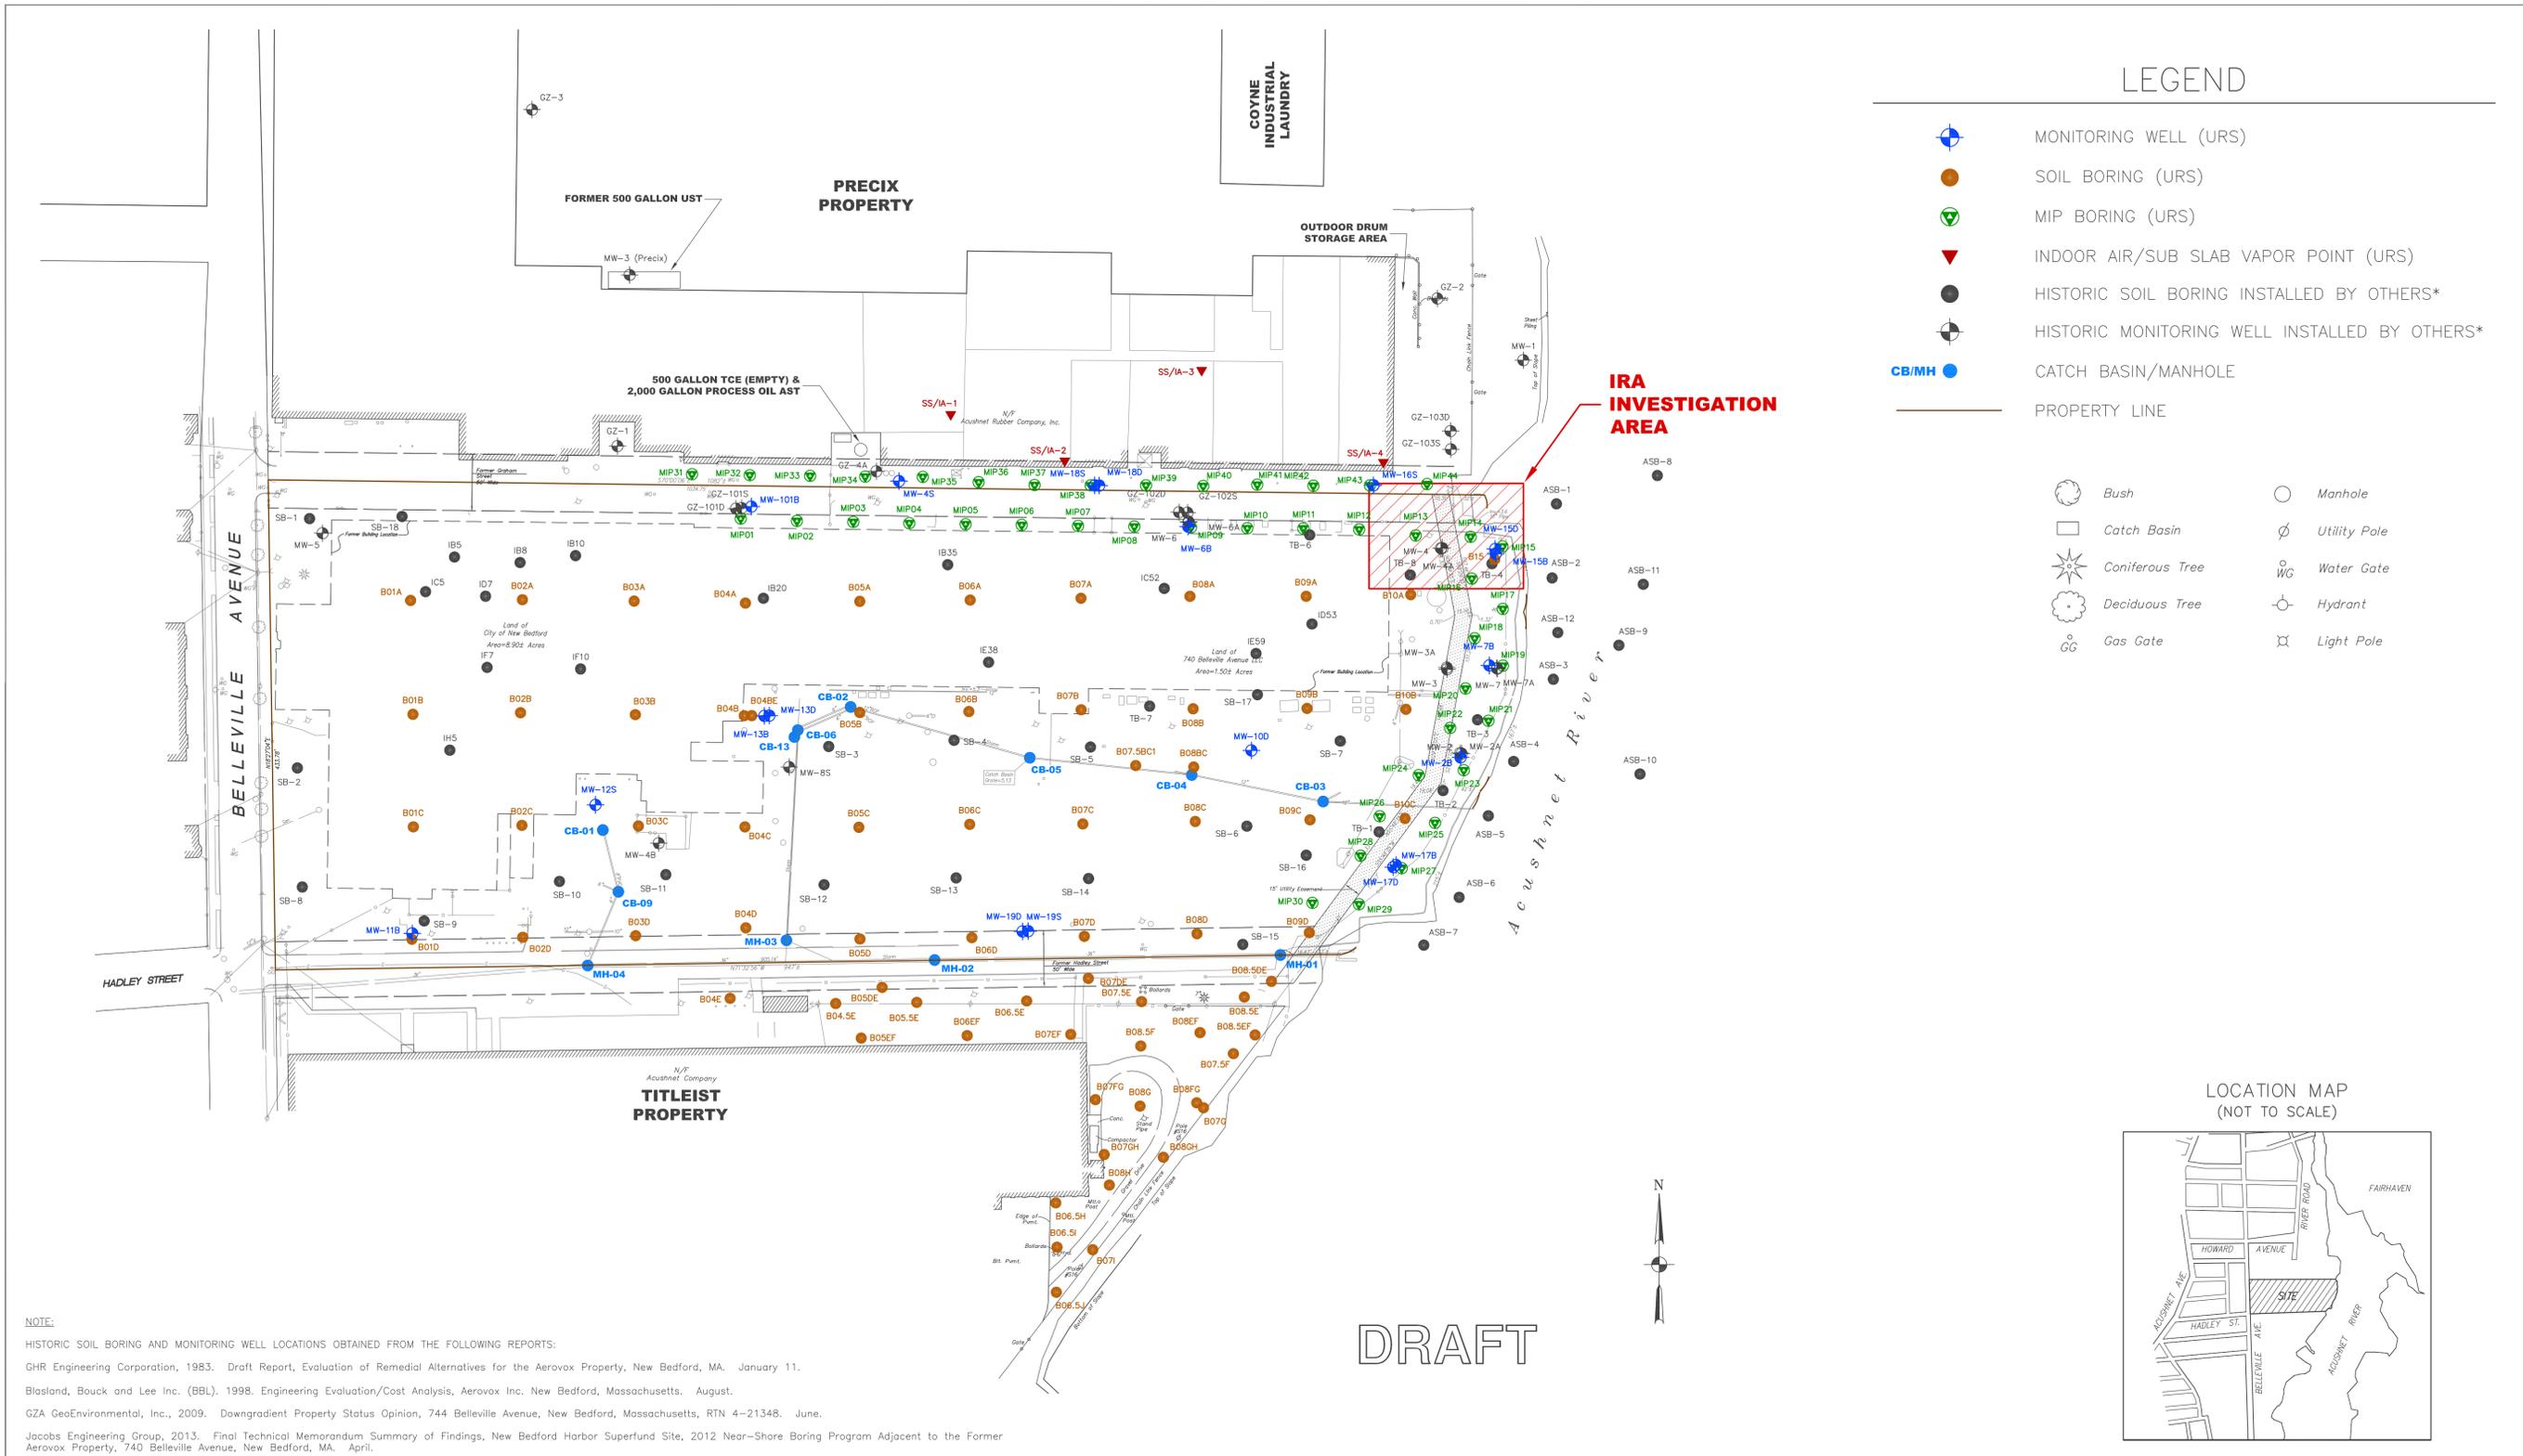

MCP GW-2 = MCP Method 1: GW-2 Water Quality Standards

MCP GW-3 = MCP Method 1: GW-3 Water Quality Standards

Project Number: 39744051.10003

Report Date: 12/20/13

**MADEP MCP Response Action Analytical Report Certification**

**This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.**

| <b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>       |   |     |
|--|---|-----|
| A  | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | YES |
| B  | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?  | YES |
| C  | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?  | YES |
| D  | Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"                      | YES |
| E a.   | VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).   | N/A |
| E b.   | APH and TO-15 Methods only: Was the complete analyte list reported for each method?   | N/A |
| F  | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?                                   | YES |
| <b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>                     |   |     |
| G  | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?   | YES |
| H  | Were all QC performance standards specified in the CAM protocol(s) achieved?  | NO  |
| I  | Were results reported for the complete analyte list specified in the selected CAM protocol(s)?  | NO  |
| <b>For any questions answered "No", please refer to the case narrative section on the following page(s).</b> |   |     |

**Please note that sample matrix information is located in the Sample Results section of this report.**

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324594  
**Report Date:** 12/20/13

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Report Submission

This final report replaces the partial report issued on December 11, 2013, and includes the results of all requested analyses.

#### MCP Related Narratives

##### Sample Receipt

Raw soil was not submitted for the analysis of Total Solids on "B03C (18.5)". At the client's request, the Total Solids result from their sample "B03C (18-20)" (reported as L1324594-17 ) was utilized in the dry weight calculation of these sample results.

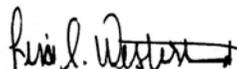

#### Volatile Organics

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

|      |   |
|------|---|
| EDL  | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                        |
| EPA  | - Environmental Protection Agency.  |
| LCS  | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.   |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS.  |
| LFB  | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.  |
| MDL  | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.   |
| MS   | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.  |
| MSD  | - Matrix Spike Sample Duplicate: Refer to MS.   |
| NA   | - Not Applicable.   |
| NC   | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.  |
| NI   | - Not Ignitable.  |
| RL   | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.  |
| RPD  | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM  | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.  |

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

**Report Format:** Data Usability Report

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324594  
**Report Date:** 12/20/13

**Data Qualifiers**

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324594  
**Report Date:** 12/20/13

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

Last revised December 11, 2013

---

### The following analytes are not included in our NELAP Scope of Accreditation:

#### Westborough Facility

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8330A/B:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

#### Mansfield Facility

**EPA 8270D:** Biphenyl.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**MADEP MCP Response Action Analytical Report Certification**

**This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.**

| <b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>       |   |     |
|--|---|-----|
| A  | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | YES |
| B  | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?  | YES |
| C  | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?  | YES |
| D  | Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"                      | YES |
| E a.   | VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).   | N/A |
| E b.   | APH and TO-15 Methods only: Was the complete analyte list reported for each method?   | N/A |
| F  | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?                                   | YES |
| <b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>                     |   |     |
| G  | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?   | NO  |
| H  | Were all QC performance standards specified in the CAM protocol(s) achieved?  | NO  |
| I  | Were results reported for the complete analyte list specified in the selected CAM protocol(s)?  | NO  |
| <b>For any questions answered "No", please refer to the case narrative section on the following page(s).</b> |   |     |

**Please note that sample matrix information is located in the Sample Results section of this report.**

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324748  
**Report Date:** 12/26/13

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Report Date:** 12/26/13

### Case Narrative (continued)

#### Report Submission

This final report replaces the partial report issued December 13, 2013, and includes the results of the Volatiles analysis on sample L1324748-19 and the PCB analysis on samples L1324748-20 and -23.

#### MCP Related Narratives

##### Volatilic Organics

L1324748-13 has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L1324748-29: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

In reference to question G:

L1324748-11, -13, -14, -16, -25 and 29: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The initial calibration, associated with L1324748-11, -13, -14, -16, -25 and -29, utilized a quadratic fit for chloroethane.

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

##### PCBs

In reference to question G:

L1324748-07 and -11: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The surrogate recoveries for L1324748-07 are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

|      |   |
|------|---|
| EDL  | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                        |
| EPA  | - Environmental Protection Agency.  |
| LCS  | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.   |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS.  |
| LFB  | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.  |
| MDL  | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.   |
| MS   | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.  |
| MSD  | - Matrix Spike Sample Duplicate: Refer to MS.   |
| NA   | - Not Applicable.   |
| NC   | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.  |
| NI   | - Not Ignitable.  |
| RL   | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.  |
| RPD  | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM  | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.  |

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

**Report Format:** Data Usability Report

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324748  
**Report Date:** 12/26/13

**Data Qualifiers**

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324748  
**Report Date:** 12/26/13

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

Last revised December 11, 2013

### The following analytes are not included in our NELAP Scope of Accreditation:

#### Westborough Facility

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8330A/B:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

#### Mansfield Facility

**EPA 8270D:** Biphenyl.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

### The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

#### Drinking Water

**EPA 200.8:** Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

**EPA 300.0:** Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

**EPA 332:** Perchlorate.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

#### Non-Potable Water

**EPA 200.8:** Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

**EPA 200.7:** Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

**EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

**EPA 624:** Volatile Halocarbons & Aromatics,

**EPA 608:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

**MADEP MCP Response Action Analytical Report Certification**

**This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.**

| <b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>       |   |     |
|--|---|-----|
| A  | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | YES |
| B  | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?  | YES |
| C  | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?  | YES |
| D  | Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"                      | YES |
| E a.   | VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).   | N/A |
| E b.   | APH and TO-15 Methods only: Was the complete analyte list reported for each method?   | N/A |
| F  | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?                                   | YES |
| <b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>                     |   |     |
| G  | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?   | NO  |
| H  | Were all QC performance standards specified in the CAM protocol(s) achieved?  | NO  |
| I  | Were results reported for the complete analyte list specified in the selected CAM protocol(s)?  | NO  |
| <b>For any questions answered "No", please refer to the case narrative section on the following page(s).</b> |   |     |

**Please note that sample matrix information is located in the Sample Results section of this report.**

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324834  
**Report Date:** 12/26/13

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Report Date:** 12/26/13

### Case Narrative (continued)

#### Report Submission

This final report replaces the partial report issued December 13, 2013, and includes the results of the PCB analysis on samples L1324834-08, -10, and -15.

#### MCP Related Narratives

##### Volatile Organics

In reference to question G:

L1324834-12, -17, -18, -19 and -24: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The initial calibration, associated with L1324834-12, -17, -18, -19 and -24, utilized a quadratic fit for chloroethane.

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

#### PCBs

L1324834-07 has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the analytical dilution required by the target compounds present in the sample.

L1324834-13 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

In reference to question G:

L1324834-07 and -20 : One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The surrogate recoveries for L1324834-07 and -20 are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilutions required to quantitate the samples. Re-extraction was not required; therefore, the results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

|      |   |
|------|---|
| EDL  | - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).                        |
| EPA  | - Environmental Protection Agency.  |
| LCS  | - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.   |
| LCSD | - Laboratory Control Sample Duplicate: Refer to LCS.  |
| LFB  | - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.  |
| MDL  | - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.   |
| MS   | - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.  |
| MSD  | - Matrix Spike Sample Duplicate: Refer to MS.   |
| NA   | - Not Applicable.   |
| NC   | - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.  |
| NI   | - Not Ignitable.  |
| RL   | - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.  |
| RPD  | - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report. |
| SRM  | - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.  |

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

**Report Format:** Data Usability Report

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324834  
**Report Date:** 12/26/13

**Data Qualifiers**

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324834  
**Report Date:** 12/26/13

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

Last revised December 11, 2013

### The following analytes are not included in our NELAP Scope of Accreditation:

#### Westborough Facility

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8330A/B:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

#### Mansfield Facility

**EPA 8270D:** Biphenyl.

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

### The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

#### Drinking Water

**EPA 200.8:** Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

**EPA 300.0:** Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

**EPA 332:** Perchlorate.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

#### Non-Potable Water

**EPA 200.8:** Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

**EPA 200.7:** Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

**EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

**EPA 624:** Volatile Halocarbons & Aromatics,

**EPA 608:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

**MADEP MCP Response Action Analytical Report Certification**

**This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.**

| <b>An affirmative response to questions A through F is required for "Presumptive Certainty" status</b>       |   |     |
|--|---|-----|
| A  | Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times? | YES |
| B  | Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?  | YES |
| C  | Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?  | YES |
| D  | Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"                      | YES |
| E a.   | VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).   | N/A |
| E b.   | APH and TO-15 Methods only: Was the complete analyte list reported for each method?   | N/A |
| F  | Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?                                   | YES |
| <b>A response to questions G, H and I is required for "Presumptive Certainty" status</b>                     |   |     |
| G  | Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?   | NO  |
| H  | Were all QC performance standards specified in the CAM protocol(s) achieved?  | NO  |
| I  | Were results reported for the complete analyte list specified in the selected CAM protocol(s)?  | NO  |
| <b>For any questions answered "No", please refer to the case narrative section on the following page(s).</b> |   |     |

**Please note that sample matrix information is located in the Sample Results section of this report.**

**Project Name:** AEROVOX GEOPROBE  
**Project Number:** 39744051.10003

**Lab Number:** L1324962  
**Report Date:** 12/26/13

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Lab Number:** L1324962  
**Report Date:** 12/26/13

### Case Narrative (continued)

#### Report Submission

This final report replaces the partial report issued December 16, 2013, and includes the results of the PCB analysis on samples L1324962-10, -11, and -17.

#### MCP Related Narratives

##### Volatile Organics

L1324962-04 and -21 were analyzed as High Level Methanols in order to quantitate the samples within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analyses. The results of both analyses are reported.

In reference to question H:

The continuing calibration standards, associated with L1324962-04, -07, -14, and -21, are outside the acceptance criteria for several compounds; however, they are within overall method allowances. Copies of the continuing calibration standards are included as an addendum to this report.

In reference to question I:

All samples were analyzed for a subset of MCP compounds per the Chain of Custody.

##### PCBs

In reference to question G:

L1324962-01 and -08: One or more of the target analytes did not achieve the requested CAM reporting limits.

In reference to question H:

The surrogate recoveries for L1324962-01 and -08 are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene and decachlorobiphenyl (all 0%) due to the dilutions required to quantitate the samples. Re-extraction was not required; therefore, the results of the original analyses are reported.

The MS/MSD requested on L1324962-08 was not analyzed because the dilution required by the elevated concentrations of target compounds present in the sample to be utilized for the MS/MSD would have caused the spike compounds to be diluted below the range of calibration.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.
