## 1.0 INTRODUCTION

This document is an *Immediate Response Action (IRA) Status Report No. 2* prepared by SITEC Environmental, Inc. (SITEC) regarding a reported release of oil and/or hazardous materials (OHM) at a vacant residential lot located at 85 McCabe Street in Dartmouth, Massachusetts (the "Site"). This report serves to notify the Massachusetts Department of Environmental Protection (MassDEP) of the results of the completed assessment activities which are performed under authorization from Terceira Construction, the potentially responsible party (PRP) for this release.

The actions were conducted in compliance with Massachusetts General Laws Chapter 21E (MGL Chapter 21E) and the Massachusetts Contingency Plan (MCP), 310 CMR 40.0000. The purpose of this report is to satisfy MCP requirements for IRA status reports at 310 CMR 40.0425. SITEC will prepare and submit subsequent status reports every six months or until an IRA Completion Report is submitted.

### 1.1 Limitations

The conclusions contained in this report are based solely upon and limited to the information described herein. Overall site observations were limited to clearly visible, unobstructed conditions. In completing this IRA Plan, SITEC did not consider whether this property is in compliance with any other statutes, laws, by-laws, regulations or policies unless compliance was directly related to the reported release. A portion of the information provided in this report is based upon personal interviews by the parties involved. SITEC did not attempt to independently verify the completeness, correctness or accuracy of this information. SITEC reserves the right to change its conclusions upon learning that this information was incomplete, incorrect or inaccurate.

## 2.0 **PROPERTY DESCRIPTION**

The following information was obtained during SITEC's Property reconnaissance, from local records review, and a review of publicly available maps and plans.

#### 2.1 **Property Location**

The Site is located at 85 McCabe Street, Bristol County, Dartmouth, Massachusetts. According to the Town of Dartmouth Assessors Office, the land on which the Site is located is identified on Map 144, as Lot 64 (the "Property"). The coordinates for the Site is approximately  $41^{\circ}$  36' 59" North Latitude and  $70^{\circ}$  56' 51" West Longitude. The Property is rectangular and consists of approximately 8,750 square feet. A Locus Map is included as Figure 1 and a Site Sketch is included as Figure 2.

#### 2.2 Vicinity Characteristics

The Property is zoned residential and is located in a sub-urban residential area in South Dartmouth. The Property is located approximately 0.3 miles west from the Dartmouth-New Bedford town line. The Property and the vicinity are served by municipal water, gas, and telephone/cable services; however, there are private drinking water supply wells located within 500 feet from the Site.

After discovery of this release MassDEP and the Dartmouth Board of Health (BOH) walked the surrounding neighborhood and observed construction activities at several other parcels in the vicinity and requested sampling of soil at these other parcels. Elevated levels of Poly-Chlorinated Biphenyls (PCBs) and lead were reported in soil from these parcels. These parcels are currently regulated by MassDEP (RTNs: 4-27703 and 4-27576).

As part of research for a separate unrelated site, SITEC discovered newspaper articles from 1939 that indicated waste disposal activities occurred in the McCabe Street area dating back to the 1930s that may have involved the Town of Dartmouth and/or City of New Bedford. This prompted MassDEP to issue Requests for Information (RFIs) to the City of New Bedford and the Town of Dartmouth requesting any information relative to sources and transportation of the waste material and property ownership at the time of waste deposition. Subsequently, MassDEP has initiated a sub-surface investigation in the neighborhood which includes the installation of soil borings and groundwater monitoring wells. Initial results indicate the presence of buried waste along McCabe Street, East Wordell Street, and Sharp Street in the vicinity of the Property.

### 2.3 Property Uses

The Property is currently unoccupied. There was a former single family residence located on the Property (constructed in 1949) which was demolished. The construction of a new single family residence began in July 2018. The foundation excavation has been completed and the bottom of the excavation is covered with pea stone. Construction was halted upon discovery of the release.

#### 2.4 Uses of Adjoining Properties

Single family residences abut the Property to the west, east. An undeveloped lot abuts the Property to the north. McCabe Street abuts the Property to the south with single family residences located across McCabe Street from the Property.

#### 2.5 Corrected Property Boundaries

In March, Terceira Construction became aware that they did not purchase the entire property associated with the former residence at 85 McCabe Street. Terceria Construction only purchased Lot 64 and not 64-1located to the north. Lot 64-1 remains in the name of the former owner of 85 McCabe Street (Steven Fernandses) and is a land locked parcel. When conducting test pits, SITEC assumed the entire former house lot was transferred and was not aware that test pits advanced on the northern portion was on land not owned by Terceria Construction. Although a majority of the test pits is located on Lot 64, five of the test pits were advanced on Lot 64-1 remaining owned by the former owner of 85 McCabe Street. TP-1, TP-2, TP-3, TP-14, and TP-15 were advanced on Lot 64-1. An updated Site Sketch is included as Figure 2.

## 3.0 COMPLIANCE HISTORY

On July 30, 2018 MassDEP received verbal notification from Michael O'Reilly, Environmental Affairs Coordinator for the Town of Dartmouth regarding a release of OHM at the Site. Mr. O'Reilly reported that deteriorated metal drums containing a black viscous petroleum-based substance, and rusted metal objects, rubber tires, glass, and other discarded debris, were excavated during foundation demolition at the single family residential lot.

On July 31, 2018, SITEC along with MassDEP visited the Site and observed cconditions consistent with the observations of Mr. O'Reilly. Visible on the side wall of the excavation was various debris including rusted metal objects, tires, glass bottles, and a black petroleum based substance in the soil. In addition, two damaged metal containers were observed on the pile of excavated soil which were leaking a viscous black petroleum based liquid.

On August 30, 2018, SITEC submitted an IRA Plan describing the assessment activities conducted up to that date and proposed future response actions. Proposed response actions outlined in the IRA Plan included the disposal of the excavated soil stockpile and further assessment with the excavation of test pits.

On December 27, 2018, SITEC submitted an IRA Status Report No. 1 reporting the assessment and removal activities conducted up to that date and proposed future response actions. Completed response actions outlined in the IRA Status Report No. 1 included the assessment and containerization of the viscous black petroleum liquid, the disposal of the excavated soil stockpile, and further assessment via the excavation of test pits.

## 4.0 COMPLETED IMMEDIATE RESPONSE ACTIONS

The Immediate Response Action (IRA) activities were conducted in accordance with the IRA Plan which was submitted to MassDEP on August 30, 2018. IRAs are assessment and/or remedial actions that are undertaken in an expeditious manner to address a time-critical release or site conditions. During this reporting period of December 28, 2018 to June 26, 2019 (since the submittal of the IRA Status Report No. 1), the following immediate response action have been conducted.

## 4.1 Removal of the Salvage Drums containing the Viscous Black Petroleum Liquid

As outlined in IRA Status Report No. 1, on September 5, 2018, the drums and viscous black petroleum substance was removed by hand from the soil stockpile and the deteriorated drums, the viscous black petroleum substance, and any contaminated soil/debris was put into two 85-gallon drum overpacks. The overpacks were sealed and remained on the Property pending disposal.

On April 4, 2019, the two overpack drums were removed from the Property by New England Disposal Technologies (NEDT). One drum was transported to VEXOR Technology, Inc. in Medina, OH and the other drum was transported to ENPRO Services in Williston, VT for disposal. The manifests are included in Attachment 1.

### 4.2 Installation of Groundwater Monitoring Wells

On May 24, 2019, SITEC oversaw the advancement of four soil borings which were completed as groundwater monitoring wells. Boring logs for these wells are included as Attachment 2. The locations of borings and wells are included on Figure 2 - Property Sketch.

During soil boring advancement, soil samples were collected at 5-foot intervals from each boring. Soil samples were collected using a macrocore with disposalable plastic liners. Selected portions of the soil profile were placed in pre-cleaned 8-oz jars and the jar headspace was screened for volume/volume of total organic vapors "as isobutylene" in ppm using a calibrated PID. The headspace screening results and sample descriptions are included on the boring logs. There were no significant responses by the PID on any of the sub-surface soil samples.

## 5.0 FUTURE IRA ACTIVITIES

Terceira Construction does not have the financial resources to continue with response actions and is currently seeking an "Eligible Person" to transfer ownership and conduct the future response actions. The scope of future response actions will be the determined by the new owner and the proposed use of the Property.

In addition, it is SITECs understanding that MassDEP has received documents provided by the City of New Bedford and the Town of Dartmouth pertaining to historic dumping in the neighborhood. MassDEP is in the process of reviewing the information to identify any other PRPs whom may be responsible for future response actions.

Authorization for SITEC to file this IRA Status Report with MassDEP on behalf of the PRP is included as Attachment 3.

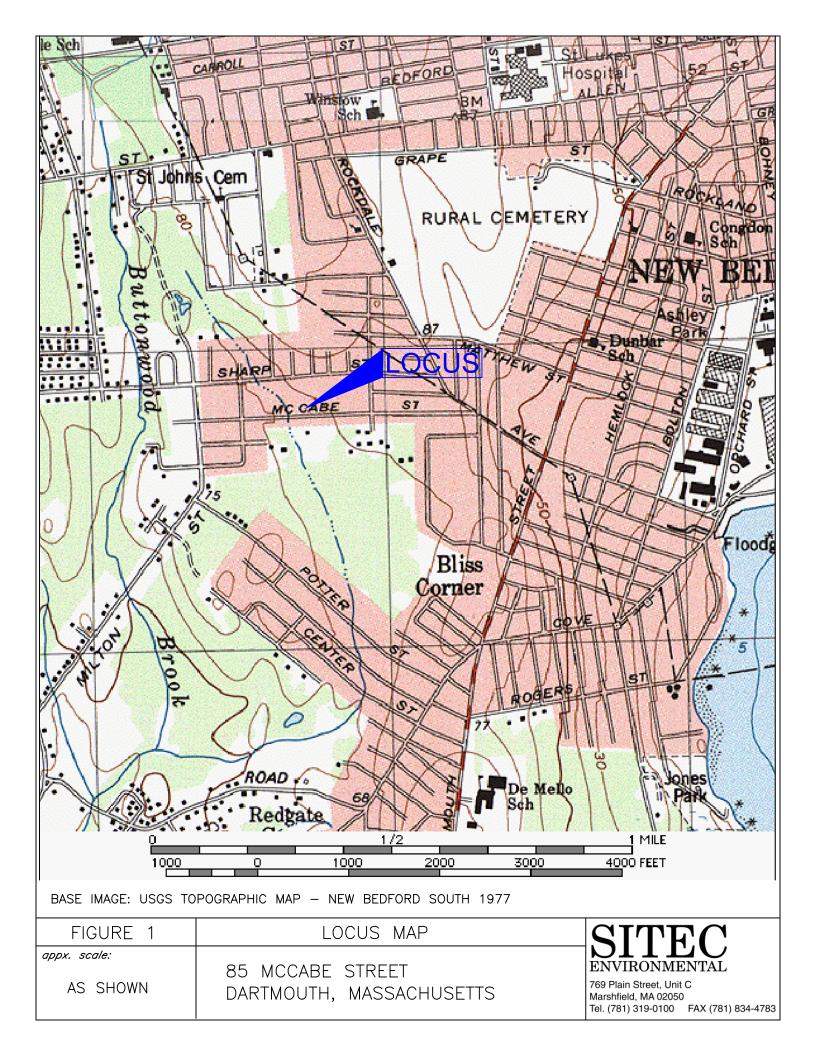

Subject to the limitations previously described and otherwise reference herein, all the available information, research, and Property observations documented to date and contained in this report are, to the best of SITEC's knowledge, true, accurate, and complete.

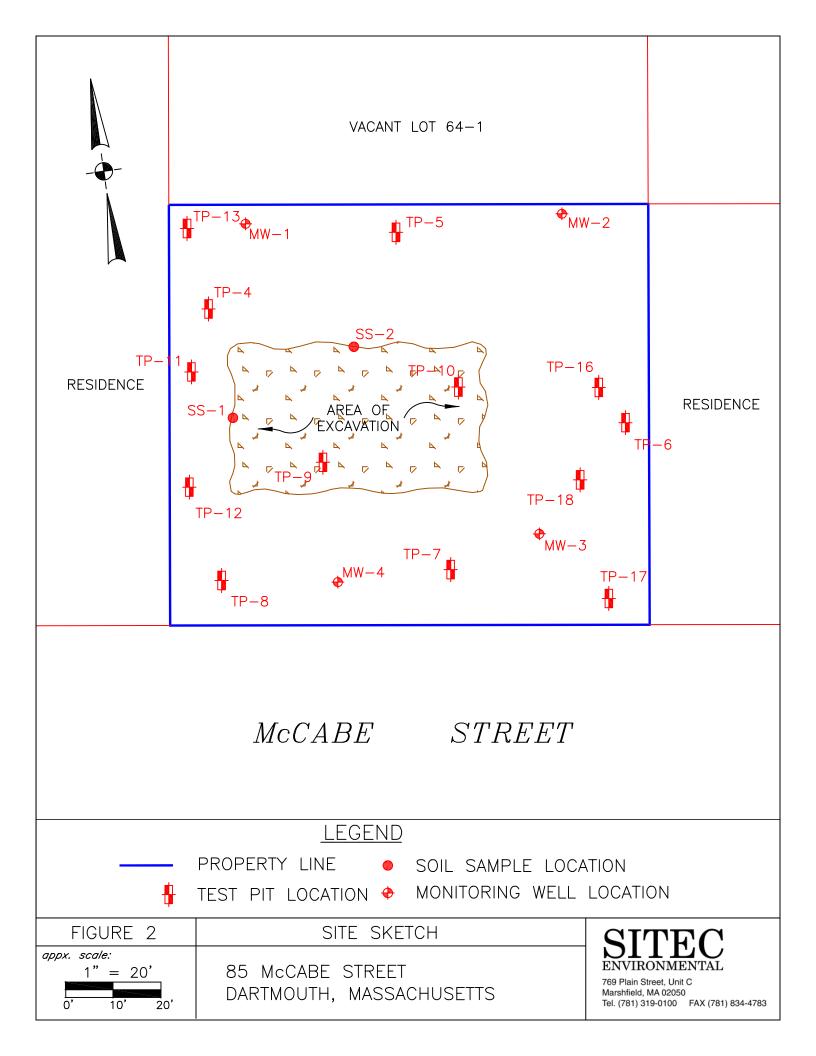

SITEC ENVIRONMENTAL, INC.

Geoffrey Souza, LSP Project Manager

PRP AUTHORIZATION

August 28, 2018

Massachusetts Department of Environmental Protection 20 Riverside Drive Lakeville, MA 02347

RE: 85 McCabe Street Dartmouth, Massachusetts Release Tracking No.: 4-27363

To Whom It May Concern:

In accordance 310 CMR 40.0009(2), I am authorizing SITEC Environmental, Inc. to act as my agent in electronically filing any required Massachusetts Contingency Plan documents for the above referenced release.

Sincerely,

Vunno

George Verissimo Terceira Construction
