RE: Semi Annual Assessment Monitoring Report (AMR)
Fall 2002 Program
General Chemical Corporation
133-135 Leland Street
Framingham, MA 01702

Dear Mr. Chormann:

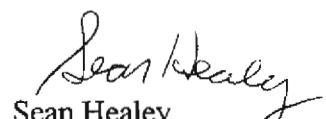

VERTEX Engineering Services, Inc. (VERTEX) is pleased to present this report on behalf of General Chemical Corporation (GCC). This report presents the results of the Fall 2002 Semi Annual Assessment Monitoring Program groundwater collection and analysis performed for the above referenced facility and adjacent areas (the Site).

This report contains information that addresses the requirements contained in Attachment I to the Massachusetts Department of Environmental Protection (MADEP) letter to GCC dated April 20, 1999, regarding the Comprehensive Assessment Report (CARP) prepared by CDW Consultants, Inc. (CDW) for the Site. Additionally, this report has been prepared in compliance with the requirements set forth in DEP's November 2, 2000 Decisions with Modifications. As such, this report includes historical data summaries and data quality evaluation for the current (Fall 2002) sampling round.

Please do not hesitate to contact us should you have any questions or comments. Thank you.

Sincerely,

VERTEX Engineering Services, Inc.

1.0 INTRODUCTION AND SUMMARY

VERTEX Engineering Services, Inc. (VERTEX) has prepared this Assessment Monitoring Report (AMR) on behalf of General Chemical Corporation (GCC). This report documents the results of the Fall 2002 Assessment Monitoring Program (AMP) at the GCC facility and adjacent areas (the Site). The GCC facility is located at 133-135 Leland Street in Framingham Massachusetts. The Site is shown on Figures 1 through 5.

The AMP is designed to monitor groundwater and surface water conditions at representative locations at the Site. This monitoring round included: the collection and analysis of fifteen (15) groundwater samples and four (4) surface water samples; the gauging of groundwater and surface water elevations at forty-five (45) monitoring wells and five (5) surface water points and the installation of a pressure transducer in monitoring well GZ-7R to implement an automated water level monitoring program.

Please note, pursuant to MADEP approval, the following monitoring well substitutions were implemented. Monitoring well GZ-2 was sampled in lieu of monitoring well CDW-2, which was found damaged. Monitoring well GZ-13 was sampled in lieu of monitoring well GZ-12, which was found damaged during the Spring sampling round (GZ-12 was proposed to be sampled, in lieu of monitoring well CDW-11). GZ-12 was subsequently fixed during the August 2002 gauging event. GZ-13 was again sampled during this sampling round in order to provide comparative data to spring round.

Monitoring well GZ-19DD was sampled in lieu of monitoring well GZ-5D, pursuant to MADEP request. Monitoring well EW-PZ-2S was sampled in lieu of monitoring well CDW-6, which was found damaged.

Monitoring well GZA-16S was not sampled or gauged, as it was found damaged with an obstruction within the well. Additionally, the car wash production well, located adjacent and north of the Site was not sampled, as access could not be secured from the owners of the car wash.

Groundwater Analytical Results

In general, groundwater analytical data obtained from this monitoring round are consistent with historical data to date. Relative to the most recent sampling data obtained during the Spring 2002 sampling round, data generated during this sampling round shows an increase in concentrations of Total Volatile Organic Compounds (VOCs) within samples obtained from monitoring wells GZ-7R, GZ-14S, GZ-15R, GZ-15D and GZ-16M. Relative to the Spring 2002 sampling round, lower concentrations of Total VOCs were identified within samples obtained from monitoring wells GZ-1, GZ-2, GZ-5S, GZ-7, GZ-13, GZ-14-M, PZ-2S, PZ-2D and GZ-19DD. Consistent with the results of the Spring 2002 sampling round, the highest concentrations of Total VOCs were detected in samples from monitoring wells GZ-13, GZ-14M, PZ-2S and GZ-19DD.

Surface Water Analytical Results

Relative to the most recent surface water data generated during the Spring 2002 sampling round, analytical data generated during this sampling round show increasing concentrations of Total VOCs within samples obtained from surface water locations SW-10, SW-DSC-1 and SW-USA-2 and a decrease in Total VOCs in the sample obtained from surface water location SW-3.

Automated Water Level Readings-GZ-7R

As part of this monitoring round, an automated water level monitoring program was implemented within the on-Site bedrock monitoring well GZ-7R. Consistent with the Spring 2002 AMR, analysis of this automated water level monitoring program, indicated that water levels within the monitoring well fluctuate significantly on a daily basis

throughout the daylight hours. This well appears to be influenced from another location. This location may be the car wash production well located north of the Site across Leland Street.

2.0 GROUNDWATER GAUGING, SAMPLING AND RESULTS

The Fall 2002 AMP conducted at the GCC facility included the following tasks: the collection and analyses of fifteen (15) groundwater samples and four (4) surface water samples; the gauging of groundwater and surface water elevations at forty-five (45) monitoring wells and five (5) surface water points and the installation of a pressure transducer in monitoring well GZ-7R to implement an automated water level monitoring program.

2.1 Groundwater Elevations Measurements, August And November 2002

On August 21, 2002 and November 20 2002, VERTEX personnel gauged and recorded depths to water within forty-five (45) Site monitoring wells and five (5) surface water points. Water levels were recorded to the nearest 0.01-foot utilizing an electronic water level indicator.

Free phase product was not identified within any of the monitoring wells during the gauging events.

Groundwater and surface water elevations were calculated using measuring point elevations (provided in previous MADEP submittals for the Site) minus the depth to water at each location. See Table 5a and 5b for a summary of all readings and elevations. See Figure 2 through 5 for groundwater contour maps detailing recorded elevations for monitoring wells screened within the sand and silt geological units at the Site, respectively.

As indicated within Figures 2 through 5, groundwater elevations obtained during this monitoring period indicate that groundwater at the Site within both the sand and silt unit is flowing in a south to southwest direction across the Site.

Consistent with previous AMR's submitted for the Site, groundwater elevations derived as a result of both the August and November 2002 gauging events indicate that a groundwater divide appears to be present at the Site in the area immediately adjacent to Leland Street, which is northwest of the GCC facility.

August 2002 Groundwater Gauging Event-Vertical Gradient

The August 2002 gauging event identified an upward vertical gradient within overburden sand/silt unit well clusters CDW-18S/D, CDW-19S/D, EW-PZ-2S/D, GZ-5S/D, GZA-17S/M, GZA-18S/M and GZA-15S/D.

A downward vertical gradient was identified in overburden/bedrock clusters GZ-4/4R, GZ-7/7R, GZA-15-D/R and overburden well clusters CDW-19D/GZA-19DD and GZA-14S/M.

November 2002 Groundwater Gauging Even-Vertical Gradient

The November 2002 gauging event identified an upward vertical gradient within overburden sand/silt unit well clusters CDW-18S/D, GZA-18S/M and CDW-19D/GZA-19DD.

A downward vertical gradient was identified in overburden/bedrock clusters GZ-4/4R, GZ-7/7R, GZA-15 D/R and overburden sand/silt well clusters GZA-14S/M, CDW-19S/D, GZ-5S/D and GZA-17S/M.

2.1.1 Automated Water Level Readings-GZ-7R

As part of this monitoring round, an automated water level monitoring program was implemented within the on-Site bedrock monitoring well GZ-7R. Analysis of this automated water level monitoring program, indicated that water levels within the monitoring well fluctuate significantly on a daily basis throughout the daylight hours. The water level data reveals a pattern of significant draw down on a daily basis beginning at the early morning hours and continuing throughout the day into the evening hours. Data indicates that water levels within this well appear to be influenced from another location. This location may be the car wash production well located north of the Site across Leland Street. See Appendix A for automated water level graphs and readings.

2.2 Groundwater Sampling Procedures

Between November 21 and December 5, 2002, VERTEX personnel collected groundwater samples from Site monitoring wells; GZ-1, GZ-2, GZ-5S, GZ-7, GZ-7R, GZ-13, GZ-14S, GZ-14M, GZ-15S, GZ-15R, GZ-15D, GZ-16M, GZ-19DD, PZ-2S and PZ-2D. Low flow purging and sampling techniques were employed in accordance with EPA document "*Low Stress Purging and Sampling Procedures for the Collection of Groundwater Samples from Monitoring Wells*", *EPA, Region I, July 30, 1996*. Parameters including pH, temperature, specific conductivity, dissolved oxygen, ORP and turbidity were recorded using a YSI 600 XL multi-meter and Lamotte 2020 turbidity meter. Groundwater samples were collected from each monitoring well upon parameter stabilization. Purged water was placed in a 55-gallon drum and disposed of at GCC's facility.

All groundwater samples were placed in preserved laboratory supplied containers, immediately placed on ice and delivered to Groundwater Analytical Inc. Laboratories (GAI) in Buzzards Bay Massachusetts for analysis. Groundwater samples collected from each of the monitoring wells were submitted for laboratory analysis of VOCs via EPA Method 8260 and 1,4 Dioxane.

See Tables 1A through 1D for a summary of analytical results. Complete copies of laboratory data sheets are included within Appendix B. Please note historical data tabulated was obtained from GZA's *Supplemental Investigation Report dated November 28, 2001* and the *July and November 2001 AMR's* for the Site previously submitted to the MADEP.

Quality Assurance/Quality Control (QA/QC) samples were also collected and analyzed for VOCs and/or 1,4 Dioxane during this monitoring round. The samples included four (4) trip blanks and two (2) duplicate samples. The trip blanks were prepared at GAI from analyte free water and were handled and shipped in the same manner as all groundwater, and surface water samples collected during this round. The duplicate samples were collected from monitoring wells GZ-7R (MW-20) and GZ-1 (MW-21). Please see Tables 2 and 3 for a summary of duplicate and trip blank analytical results. Complete copies of laboratory data sheets are included within Appendix B.

2.3 Groundwater Analytical Results

Laboratory analytical results for groundwater samples collected during this sampling round identified nine (9) VOCs above laboratory detection limits. Total VOC concentration detected ranged from 1 ug/l (GZ-2) to 206,100 ug/l (GZ-19DD).

2.3.1 Historical Groundwater Data Trends

In general, as indicated within Tables 1A-1D, groundwater analytical data obtained during this monitoring round are consistent with historical data for the Site.

Relative to the most recent sampling data obtained during the Spring 2002 sampling round, data generated during this sampling round shows an increase in concentrations of Total VOCs within samples obtained from monitoring wells GZ-7R, GZ-14S, GZ-15S, GZ-15R, GZ-15D and GZ-16M. Relative to the Spring 2002 sampling round, lower concentrations of Total VOCs were identified within samples obtained from monitoring wells GZ-1, GZ-2, GZ-5S, GZ-7, GZ-13, GZ-14-M, PZ-2S, PZ-2D and GZ-19DD. Consistent with the results of the Spring 2002 sampling round, the highest concentrations of Total VOCs were detected in samples from monitoring wells GZ-13, GZ-14M, PZ-2S and GZ-19DD.

2.3.2 Seasonal Groundwater Variation

Consistent with observations made in previous reports, historically, groundwater elevations across the Site generally rise during the winter and are highest during the spring.

Historically, total VOCs within Site groundwater have decreased as groundwater elevations have risen within monitoring wells GZ-1, GZ-5S, GZ-7, while Total VOC's have increased as groundwater elevations have risen within monitoring wells GZ-15S, GZ-16M and GZ-19DD. However, results of this sampling round indicate Total VOCs identified in samples obtained from wells GZ-5S and GZ-7 have decreased as groundwater elevations have decreased and concentrations have decreased within

samples obtained from GZ-19DD as the groundwater elevation has decreased. Therefore, as indicated in Tables 1A-1D, there does not appear to be an overall correlation between the seasonal fluctuation in Site groundwater elevations and Total VOC concentrations detected within monitoring wells at the Site.

3.0 SURFACE WATER SAMPLING AND RESULTS

3.1 Surface Water Sampling Procedures

On November 21, 2002, VERTEX collected four (4) surface water samples at the Site (SW-10, SW-3, SW-DSC-1 and SW-USA-2). Each of the samples was collected as grab samples utilizing dedicated disposable bailers.

Each sample was placed in preserved laboratory supplied containers, immediately placed on ice and delivered to GAI for laboratory analysis of VOCs via EPA Method 8260 and 1,4 Dioxane. See Table 4 for a summary of surface water analytical results. Complete copies of laboratory data sheets are included within Appendix B.

3.2 Surface Water Analytical Results

As indicated within Table 4, laboratory analysis of surface water samples collected identified thirteen (13) VOCs above laboratory detection limits. Total VOC concentrations detected ranged from 49 ug/l (SW-3) to 10,940 ug/l (SW-10).

3.2.1 Historical Surface Water Data Trends

Historically, the Total VOC concentrations detected within surface water samples collected at the Site fluctuate between sample events.

As indicated in Table 4, relative to most recent historical Site surface water data collected during the Spring 2002 sampling round, analytical data generated during this

monitoring round show increasing concentrations of Total VOCs within samples obtained from each sample location with the exception of location SW-3.

3.2.2 Seasonal Surface Water Variation

Relative to the four sampling locations included within this monitoring round, as shown in Table 4, historically, Total VOC concentrations have decreased as elevations have dropped at surface water sampling location SW-3.

No correlation between surface water elevation and sample location SW-10 is evident.

Surface water elevations have not been historically measured at the SW-DSC-1 and SW-USA-2 locations.

Overall data for the four sample locations indicate that TOVs concentrations appear to be highest in the winter and lowest in the summer.

4.0 SUMP SAMPLING & RESULTS

During the Fall 2002 groundwater sampling round, inadvertently, a water sample was not collected from the sump located in the basement of the GCC facility. On January 17, 2003, a water sample was collected from the sump. The sample was collected as a grab sample utilizing a dedicated disposable bailer. The sample was placed in preserved laboratory supplied containers, immediately placed on ice and delivered to GAI for laboratory analysis of VOCs via EPA Method 8260 and 1,4 Dioxane. Results of the sump sampling will be submitted as an addendum to this report.

5.0 DATA USABILITY AND QA/QC DATA

Pursuant to the MADEP Decision with Modifications, November 2, 2000, this AMR includes an evaluation of the quality and usability of the data generated during this sampling round. Included within this evaluation is information on potential trip blank contamination and duplicate analysis as well as sample surrogate recoveries and quality control blank analysis, matrix and surrogate recovery. See Table 2 and 3 for a summary of analytical results for all trip blanks and duplicate samples.

Analytical results for duplicate samples collected during the sampling event (MW-20/GZ-7R, MW-21/GZ-1) reveal excellent agreement. Analytical results of compounds detected within sample MW-20 were within 0.1 ug/l of the results obtained from sample GZ-7R. Analytical results of compounds detected within sample MW-21 were within 3 ug/l of the results obtained from sample GZ-1.

Analysis of the four (4) trip blanks did not identify detectable concentrations or targeted analytes above laboratory reporting limits.

All surrogate recoveries results were within method acceptance limits. No compounds were detected in the laboratory method blanks. The quality control spike recoveries and surrogate recoveries were all within acceptable method limits.

Method detection limits for the VOC 8260 and/or 1,4 Dioxane analyses were elevated for five samples analyzed this round (PZ-2S, SW-10, GZA-13, GZ-14M and GZA-19DD). This is expected given the elevated concentrations identified within each of these samples. The elevated detection limits are the result of dilution required for quantifying those compounds exhibiting the highest concentrations. Dilution is performed within the

laboratory to reduce sample concentrations to within the instrument calibration range. There is potential that dilution can produce a false negative result.

6.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. VERTEX is not responsible for the independent conclusions, opinions or recommendations made by others based on the record review, Site inspection, field exploration, and laboratory test data presented in this report.

It must be recognized that environmental activities are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and Site investigation. The passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated.

The conclusions presented in this report are professional opinions based solely upon visual observations and supplemental testing of soil and/or groundwater at the Site. Our interpretation of the available historical information and documents reviewed, as described in this report, were also considered in the conclusions. VERTEX relied upon but did not attempt to independently verify the validity or accuracy of the findings and conclusions noted in the documentation reviewed.

This report is intended for the sole use of GCC. The scope of services performed in execution of this investigation may not be appropriate to satisfy the needs of other users, and any use or re-use of this document or the findings, conclusions, or recommendations is at the risk of said user.

This report and all supporting documentation has been submitted for review by the Massachusetts Department of Environmental Protection (“the MADEP”). Due to the inherent flexibility in interpreting the applicable regulations, MADEP review is often subjective and dependent on the opinion of the reviewer. As a result, the MADEP could require additional assessment of the Site and/or remedial action. Based on these considerations, VERTEX is not and will not be responsible for costs or other possible ramifications of additional work required by the MADEP. GCC and any other parties with financial or other interests in the subject property are urged to consider these facts.

MiniTroll Adv

Report generated: 01/16/03 11:17:07
Report from file: P:\5\Projects\4109-General Chemical\SN08627 2002-10-31 131434 GZ-7R Test 2 .b
DataMgr Version 3.70

Serial number: 00008627
Firmware Version 3.04
Unit name: miniTROLL

Test name: GZ-7R Test 2

Test defined on: 10/30/02 18:39:23
Test started on: 10/31/02 13:14:34
Test stopped on: 12/23/02 11:21:26
Test extracted on: N/A

Data gathered using Linear testing

Time between data points: 60.0000 Minutes.
Number of data samples: 1271

TOTAL DATA SAMPLES 1271

channel number [1]

Measurement type: Pressure
Channel name: OnBoard Pressure
Sensor Range: 100 PSI.
Density: 1.000 g/cm³
Latitude: 45 degrees
Elevation: 0.000 meters (0.000 feet)

Date	Time	ET (min)	Chan[1] Feet H2O

LABORATORY REPORT

Project: **General Chemical Framingham, MA**
Lab ID: **56624**
Received: **12-02-02**

Dear Sean:

Enclosed are the analytical results for the above referenced project. The project was processed for Standard turnaround.

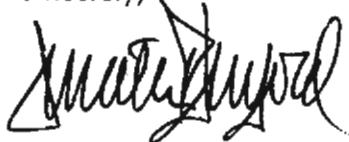

This letter authorizes the release of the analytical results, and should be considered a part of this report. This report contains a sample receipt report detailing the samples received, a project narrative indicating project changes and non-conformances, a quality control report, and a statement of our state certifications.

The analytical results contained in this report meet all applicable NELAC standards, except as may be specifically noted, or described in the project narrative. This report may only be used or reproduced in its entirety.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Should you have any questions concerning this report, please do not hesitate to contact me.

Sincerely,

Jonathan R. Sanford
President

75-25-2	Bromoform	BRL	ug/L	0.5
79-34-5	1,1,2,2-Tetrachloroethane	BRL	ug/L	0.5

Sample ID	Recovery	QC limits
Dibromofluoromethane	105 %	86 - 118 %
1,2-Dichloroethane-d ₄	103 %	80 - 120 %
Toluene-d ₈	101 %	88 - 110 %
4-Bromofluorobenzene	92 %	86 - 115 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Analyte list as specified by the Target Compound List (TCL) of the US EPA Contract Laboratory Program. Analysis performed utilizing 25mL sample purge volume.

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

◊ Indicates additional target analyte.

4-Bromofluorobenzene	99 %	86 - 115 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Analyte list as specified by the Target Compound List (TCL) of the US EPA Contract Laboratory Program. Analysis performed utilizing 25mL sample purge volume.

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

◊ Indicates additional target analyte.

QC Surrogate Compounds	Recovery	QC Limits
Dibromofluoromethane	104 %	86 - 118 %
1,2-Dichloroethane-d ₄	101 %	80 - 120 %
Toluene-d ₈	102 %	88 - 110 %
4-Bromofluorobenzene	91 %	86 - 115 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Analyte list as specified by the Target Compound List (TCL) of the US EPA Contract Laboratory Program. Analysis performed utilizing 25mL sample purge volume.

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

◊ Indicates additional target analyte.

QC Surrogate Compounds	Recovery	QC Limits
Dibromofluoromethane	107 %	86 - 118 %
1,2-Dichloroethane-d ₄	105 %	80 - 120 %
Toluene-d ₈	101 %	88 - 110 %
4-Bromofluorobenzene	94 %	86 - 115 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Analyte list as specified by the Target Compound List (TCL) of the US EPA Contract Laboratory Program. Analysis performed utilizing 25mL sample purge volume.

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

^o Indicates additional target analyte.

1,4-Difluorobenzene	98 %	80 - 120 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Method modified by use of selected ion monitoring (SIM).

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

**GROUNDWATER
ANALYTICAL****EPA Method 8260B (Modified)
1,4-Dioxane by GC/MS-SIM**

Field ID: GZ-13 Laboratory ID: 56624-29
Project: General Chemical Framingham, MA QC Batch ID: VM5-2388-W
Client: Vertex Engineering, Inc. Sampled: 11-22-02
Container: 40 ml. VOA Vial Received: 12-02-02
Preservation: HCl / Cool Analyzed: 12-04-02
Matrix: Aqueous Dilution Factor: 20

CAS Number	Analyte	Concentration	Units	Reporting Limit
123-91-1	1,4-Dioxane	BRL	ug/L	200

QC Surrogate Compounds	Recovery	QC Limits
1,4-Difluorobenzene	101 %	80 - 120 %

Method Reference: Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996). Method modified by use of selected ion monitoring (SIM).

Report Notations: BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample dilution and sample size.

GROUNDWATER ANALYTICAL

Project Narrative

Project: **General Chemical Framingham, MA**
Client: **Vertex Engineering, Inc.**

Lab ID: **56624**
Received: **12-02-02**

A. Physical Condition of Sample(s)

This project was received by the laboratory in satisfactory condition, and the sample(s) were received undamaged in appropriate containers with the correct preservation, except for the following non-conformance(s):

1. Project 56624 was received at a temperature of 8.6 C. This measurement is outside the recommended range of 2-6 C.

B. Project Documentation

This project was accompanied by satisfactory Chain of Custody documentation. The sample container label(s) agreed with the Chain of Custody.

C. Analysis of Sample(s)

No analytical anomalies or non-conformances were noted by the laboratory during the processing of these sample(s). All data contained within this report are released without qualification.

REMARKS / SPECIAL INSTRUCTIONS										Total 1 / 7 / DATA QUALITY OBJECTIVES
<p>1. X Project Sampling.</p> <p>1. qilly S. C. Sampling.</p>										Project Specific QC
										Many regulatory programs and EPA methods require project specific QC. Project specific QC includes Sample Duplicates, Matrix Spikes, and/or Matrix Spikes Laboratory QC is not project specific unless rearranged. Project specific QC samples are charged on a per sample basis. For water samples, each MS, NSD and Sample Duplicate requires an additional sample aliquot.

Quality Assurance/Quality Control

A. Program Overview

Groundwater Analytical conducts an active Quality Assurance program to ensure the production of high quality, valid data. This program closely follows the guidance provided by *Interim Guidelines and Specifications for Preparing Quality Assurance Project Plans*, US EPA QAMS-005/80 (1980), and *Test Methods for Evaluating Solid Waste*, US EPA, SW-846, Update III (1996).

Quality Control protocols include written Standard Operating Procedures (SOPs) developed for each analytical method. SOPs are derived from US EPA methodologies and other established references. Standards are prepared from commercially obtained reference materials of certified purity, and documented for traceability.

Quality Assessment protocols for most organic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. All samples, standards, blanks, laboratory control samples, matrix spikes and sample duplicates are spiked with internal standards and surrogate compounds. All instrument sequences begin with an initial calibration verification standard and a blank; and excepting GC/MS sequences, all sequences close with a continuing calibration standard. GC/MS systems are tuned to appropriate ion abundance criteria daily, or for each 12 hour operating period, whichever is more frequent.

Quality Assessment protocols for most inorganic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. Standard curves are derived from one reagent blank and four concentration levels. Curve validity is verified by standard recoveries within plus or minus ten percent of the curve.

B. Definitions

Batches are used as the basic unit for Quality Assessment. A Batch is defined as twenty or fewer samples of the same matrix which are prepared together for the same analysis, using the same lots of reagents and the same techniques or manipulations, all within the same continuum of time, up to but not exceeding 24 hours.

Laboratory Control Samples are used to assess the accuracy of the analytical method. A Laboratory Control Sample consists of reagent water or sodium sulfate spiked with a group of target analytes representative of the method analytes. Accuracy is defined as the degree of agreement of the measured value with the true or expected value. Percent Recoveries for the Laboratory Control Samples are calculated to assess accuracy.

Method Blanks are used to assess the level of contamination present in the analytical system. Method Blanks consist of reagent water or an aliquot of sodium sulfate. Method Blanks are taken through all the appropriate steps of an analytical method. Sample data reported is not corrected for blank contamination.

Surrogate Compounds are used to assess the effectiveness of an analytical method in dealing with each sample matrix. Surrogate Compounds are organic compounds which are similar to the target analytes of interest in chemical behavior, but which are not normally found in environmental samples. Percent Recoveries are calculated for each Surrogate Compound.

LABORATORY REPORT

Project: **General Chemical/4109**
Lab ID: **56715**
Received: **12-05-02**

Dear Sean:

Enclosed are the analytical results for the above referenced project. The project was processed for Standard turnaround.

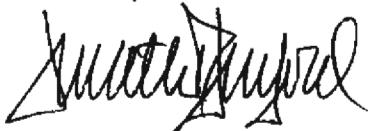

This letter authorizes the release of the analytical results, and should be considered a part of this report. This report contains a sample receipt report detailing the samples received, a project narrative indicating project changes and non-conformances, a quality control report, and a statement of our state certifications.

The analytical results contained in this report meet all applicable NELAC standards, except as may be specifically noted, or described in the project narrative. This report may only be used or reproduced in its entirety.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Should you have any questions concerning this report, please do not hesitate to contact me.

Sincerely,

Jonathan R. Sanford
President

GROUNDWATER ANALYTICAL

Project Narrative

Project: **General Chemical/4109**
Client: **Vertex Engineering, Inc.**

Lab ID: **56715**
Received: **12-05-02**

A. Physical Condition of Sample(s)

This project was received by the laboratory in satisfactory condition. The sample(s) were received undamaged in appropriate containers with the correct preservation.

B. Project Documentation

This project was accompanied by satisfactory Chain of Custody documentation. The sample container label(s) agreed with the Chain of Custody.

C. Analysis of Sample(s)

No analytical anomalies or non-conformances were noted by the laboratory during the processing of these sample(s). All data contained within this report are released without qualification.

GROUNDWATER ANALYTICAL

Quality Assurance/Quality Control

A. Program Overview

Groundwater Analytical conducts an active Quality Assurance program to ensure the production of high quality, valid data. This program closely follows the guidance provided by *Interim Guidelines and Specifications for Preparing Quality Assurance Project Plans*, US EPA QAMS-005/80 (1980), and *Test Methods for Evaluating Solid Waste*, US EPA, SW-846, Update III (1996).

Quality Control protocols include written Standard Operating Procedures (SOPs) developed for each analytical method. SOPs are derived from US EPA methodologies and other established references. Standards are prepared from commercially obtained reference materials of certified purity, and documented for traceability.

Quality Assessment protocols for most organic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. All samples, standards, blanks, laboratory control samples, matrix spikes and sample duplicates are spiked with internal standards and surrogate compounds. All instrument sequences begin with an initial calibration verification standard and a blank; and excepting GC/MS sequences, all sequences close with a continuing calibration standard. GC/MS systems are tuned to appropriate ion abundance criteria daily, or for each 12 hour operating period, whichever is more frequent.

Quality Assessment protocols for most inorganic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. Standard curves are derived from one reagent blank and four concentration levels. Curve validity is verified by standard recoveries within plus or minus ten percent of the curve.

B. Definitions

Batches are used as the basic unit for Quality Assessment. A Batch is defined as twenty or fewer samples of the same matrix which are prepared together for the same analysis, using the same lots of reagents and the same techniques or manipulations, all within the same continuum of time, up to but not exceeding 24 hours.

Laboratory Control Samples are used to assess the accuracy of the analytical method. A Laboratory Control Sample consists of reagent water or sodium sulfate spiked with a group of target analytes representative of the method analytes. Accuracy is defined as the degree of agreement of the measured value with the true or expected value. Percent Recoveries for the Laboratory Control Samples are calculated to assess accuracy.

Method Blanks are used to assess the level of contamination present in the analytical system. Method Blanks consist of reagent water or an aliquot of sodium sulfate. Method Blanks are taken through all the appropriate steps of an analytical method. Sample data reported is not corrected for blank contamination.

Surrogate Compounds are used to assess the effectiveness of an analytical method in dealing with each sample matrix. Surrogate Compounds are organic compounds which are similar to the target analytes of interest in chemical behavior, but which are not normally found in environmental samples. Percent Recoveries are calculated for each Surrogate Compound.

◊ Indicates additional target analyte.

GROUNDWATER ANALYTICAL

Certifications and Approvals

CONNECTICUT, Department of Health Services, PH-0586

Potable Water, Wastewater/Trade Waste, Sewage/Effluent, and Soil

pH, Conductivity, Acidity, Alkalinity, Hardness, Chloride, Fluoride, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, Orthophosphate, Total Dissolved Solids, Cyanide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Total Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Titanium, Vanadium, Zinc, Purgeable Halocarbons, Purgeable Aromatics, Pesticides, PCBs, PCBs in Oil, Ethylene Dibromide, Phenols, Oil and Grease.

C. MAINE, Department of Human Services, MA103

Drinking Water

Reciprocal certification in accordance with Massachusetts certification for drinking water analytes.

Waste Water

Reciprocal certification in accordance with Massachusetts certification for waste water analytes.

D. MASSACHUSETTS, Department of Environmental Protection, M-MA-103

Potable Water

Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Copper, Lead, Mercury, Nickel, Selenium, Thallium, Nitrate-N, Nitrite-N, Fluoride, Sodium, Sulfate, Cyanide, Turbidity, Residual Free Chlorine, Calcium, Total Alkalinity, Total Dissolved Solids, pH, Trihalomethanes, Volatile Organic Compounds, 1,2-Dibromoethane, 1,2-Dibromo-3-chloropropane, Total Coliform, Fecal Coliform, Heterotrophic Plate Count, E-Coli

Non-Potable Water

Aluminum, Antimony, Arsenic, Beryllium, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Manganese, Mercury, Molybdenum, Nickel, Selenium, Silver, Strontium, Thallium, Titanium, Vanadium, Zinc, pH, Specific Conductance, Total Dissolved Solids, Total Hardness, Calcium, Magnesium, Sodium, Potassium, Total Alkalinity, Chloride, Fluoride, Sulfate, Ammonia-N, Nitrate-N, Kjeldahl-N, Orthophosphate, Total Phosphorus, Chemical Oxygen Demand, Biochemical Oxygen Demand, Total Cyanide, Non-Filterable Residue, Total Residual Chlorine, Oil and Grease, Total Phenolics, Volatile Halocarbons, Volatile Aromatics, Chlordane, Aldrin, Dieldrin, DDD, DDE, DDT, Heptachlor, Heptachlor Epoxide, Polychlorinated Biphenyls (water), Polychlorinated Biphenyls (oil).

E. MICHIGAN, Department of Environmental Quality

Drinking Water

Trihalomethanes, Regulated and Unregulated Volatile Organic Compounds by EPA Method 524.2; 1,2-Dibromoethane, 1,2-Dibromo-3-chloropropane by EPA Method 504.1

F. NEW HAMPSHIRE, Department of Environmental Services, 202798

Drinking Water

Metals by Graphite Furnace, Metals by ICP, Mercury, Nitrite-N, Orthophosphate, Residual Free Chlorine, Turbidity, Total Filterable Residue, Calcium Hardness, pH, Alkalinity, Sodium, Sulfate, Total Cyanide, Insecticides, Herbicides, Base/Neutrals, Trihalomethanes, Volatile Organics, Vinyl Chloride, DBCP, EDB, Nitrate-N.

Wastewater

Metals by Graphite Furnace, Metals by ICP, Mercury, pH, Specific Conductivity, TDS, Total Hardness, Calcium, Magnesium, Sodium, Potassium, Total Alkalinity, Chloride, Fluoride, Sulfate, Ammonia-N, Nitrate-N, Orthophosphate, TKN, Total Phosphorus, COD, BOD, Non-Filterable Residue, Oil & Grease, Total Phenolics, Total Residual Chlorine, PCBs in Water, PCBs in Oil, Pesticides, Volatile Organics, Total Cyanide.

RHODE ISLAND, Department of Health, 54

Surface Water, Air, Wastewater, Potable Water, Sewage

Chemistry: Organic and Inorganic
