Subject: Phase V Remedy Operation Status - Inspection & Monitoring Report  
April 1, 2012 through September 30, 2012  
Former Varian Facility Site  
Beverly, Massachusetts  
MADEP # 3-0485

Dear Ms. Stromberg:

On behalf of Varian Medical Systems, Inc., Shaw Environmental & Infrastructure, Inc. has prepared a Phase V Remedy Operation Status - Inspection & Monitoring Report summarizing the activities conducted from April 1, 2012 through September 30, 2012 for the former Varian Facility Site in Beverly, Massachusetts. A copy of this report has also been provided to the Varian Public Involvement Plan (PIP) repository at the Beverly City Library, the City of Beverly Board of Health, and the Beverly Conservation Commission. A notice of availability for this document has also been issued to the PIP mailing list established for this Site.

If you have any questions regarding the report, please do not hesitate to contact me.

Sincerely,  
**Shaw Environmental & Infrastructure, Inc.**

Raymond J. Cadorette  
Project Manager

## 1.0 INTRODUCTION AND BACKGROUND

### 1.1 Introduction

On behalf of Varian Medical Systems, Inc. (Varian), Shaw Environmental & Infrastructure, Inc. (Shaw) has prepared this semi-annual Remedy Operation Status (ROS)-Inspection and Monitoring Report for the former Varian facility located at 150 Sohier Road and other properties located in the vicinity (the Site) in Beverly, Massachusetts (Release Tracking Number (RTN) 3-0485). A Site Location Map illustrating the location of the former Varian facility is attached as **Figure 1**, and a Site Plan is attached as **Figure 2**. This semi-annual report summarizes activities conducted during the period of April 1, 2012 through September 30, 2012. As required, the Massachusetts Department of Environmental Protection (MADEP) Comprehensive Response Action Transmittal Form (BWSC108) and Remedial Monitoring Report (RMR) associated with this submittal were submitted electronically to MADEP. Complete copies of BWSC108 and the RMR are included in **Appendix A**. This Phase V Remedy Operation Status - Inspection and Monitoring Report has been formatted to reference the requirements outlined in Section 310 CMR 40.0892(2) of the Massachusetts Contingency Plan (MCP).

Results of remedial activities and monitoring conducted during this reporting period are presented in this report.

### 1.2 Background

Based on the Phase II Comprehensive Site Assessment (CSA) completed in 2000 (IT, 2000), a condition of No Significant Risk existed at the Site with the exception of potential future significant risk associated with groundwater use in the area identified as a Potentially Productive Aquifer (PPA) north of Route 128. Groundwater concentrations in this area were above applicable Massachusetts Drinking Water Standards. As a result, one of the stated remedial action goals in the December 2001 Phase IV Remedy Implementation Plan (Phase IV Plan) submitted to MADEP for the above-referenced Site, was to achieve Drinking Water Standards in this area of the site (IT, 2001).

The Phase IV Plan proposed remedial actions for addressing volatile organic compounds (VOCs) in soil and groundwater at the subject Site. *In situ* oxidation of VOCs in soil and groundwater using permanganate solution was chosen as the best remedial alternative for the Site. The Phase IV Plan proposed treatment in the "source areas" to achieve these objectives. The Potential Source Location (PSL) areas at the former facility identified in the Phase IV Plan as potentially affecting the GW-1 area are listed below:

- PSL 5 – Potential former septic tank near Building 3
- PSL 6 – Building 6 - Potential former septic tank/leach field
- PSL 9 – Inspection pit near Building 3
- PSL 11 – Building 3 laboratory
- PSL 12 – Potential former lime pit near Building 3

Other PSL areas that do not impact the PPA and certain other downgradient areas have been included in the *in situ* oxidation program to expedite groundwater cleanup. These areas include PSL 7--Building 5 Lab, PSL 10--open field at south end of 150 Sohier Road, downgradient treatment areas at 31 Tozer Road, and in the Longview/Hill Street area.

Implementation of the Comprehensive Response Action, including the injection of permanganate solution, began in July 2002 and a Phase IV As-Built and Final Inspection Report (Shaw, 2002a) detailing initial Phase IV activities including permitting, well installation, construction of the remedial treatment system, and initial implementation of comprehensive actions was submitted to MADEP in October 2002. The Phase IV As-Built and Final Inspection Report also provided results of additional soil and groundwater analyses, identified minor modifications made to the Phase IV Plan, and documented the final inspection of the remedial system.

In December 2002, Varian submitted a Remedy Operation Status Opinion (Shaw, 2002b), which stated that the performance standards for ROS, as specified in 310 CMR 40.0893(2), have been achieved and will be maintained at the Site. A Response Action Outcome (RAO) has not yet been achieved at the Site, and the operation and maintenance of the remedial action will proceed under Remedy Operation Status.

The sodium permanganate treatment conducted at the Site since 2002 has produced significant reductions in chlorinated VOC levels at multiple depths in groundwater across the Site. These remedial activities are reported to MADEP in regular semi-annual ROS reports. As detailed in the October 2006 status report, bioremediation was proposed as a supplemental remedial approach to address two small areas at the Site (Shaw, 2006). These areas shown on **Figure 3** include shallow groundwater with residual trichloroethene (TCE) impacts located close to the Unnamed Stream at the northeast corner of the Site. Bioremediation was used to address the shallow groundwater by the Unnamed Stream because permanganate treatment may affect the stream. The second area is at the northeast corner of Building 3 where deep overburden groundwater is impacted with residual 1,1,1-trichloroethane (TCA).

Subsequent to the start of Comprehensive Response Actions, the PPA designation for the area to the north of Route 128 was removed by MADEP and, as a result, Drinking Water Standards no longer apply to this area. Therefore, the Remedial Action Goal specified in the Phase IV Plan to achieve drinking water standards in downgradient wells in the PPA area such as BR-1 is no longer applicable. As presented in the October 30, 2010 status report (Shaw, 2010), the following updated remedial action goals will be used for ongoing response actions being conducted under Phase V ROS at the Site:

1. Maintain compliance with Upper Concentration Limit (UCLs)
2. Achieve a condition of No Significant Risk for site workers in Building 3 (RTN 3-28531), as well as other site buildings, by remediating, where present, elevated VOC concentrations in soil and groundwater beneath the building. In the case of Building 3, the preference would be to achieve this condition without the continued operation of a soil vapor extraction (SVE) system.
3. Limit rebound in VOC source areas such that potential impacts to indoor air in downgradient areas continue to pose No Significant Risk,
4. Demonstrate that VOC concentrations in groundwater at the Site do not represent an uncontrolled source for impacts to surface water, and
5. Demonstrate that VOC concentrations in soil and groundwater at the Site continue to pose No Significant Risk in accordance with current MADEP requirements.

To achieve these goals, the previously proposed remediation planning criteria will continue to be applied to focus remediation activities at the Site. The goals include the decrease of target VOC concentrations in certain source area wells to 50 percent or less of the UCL and the reduction of target VOC concentrations (including breakdown products) in treatment areas by at least 50 percent below pretreatment levels in order to mitigate potential post-remediation rebound effects. These goals are consistent with MADEP guidance (Policy #WSC-04-160) on the feasibility of achieving background concentrations which indicates that the reduction of risk to 50% of a level where No Significant Risk is achieved will be considered appropriate site closure criteria with Presumptive Certainty (MADEP, 2004b).

## **2.0 DESCRIPTION OF OPERATION, MAINTENANCE, AND/OR MONITORING ACTIVITIES (310 CMR 40.0892 (2)(a))**

The following sections summarize Remedy Operation Status activities that were conducted during the reporting period of April 1, 2012 through September 30, 2012.

### **2.1 Permanganate Injection and Monitoring Activities**

Injection locations for the 2012 permanganate treatment program included: deep overburden wells OB12-DO (north of Building 3), AP26-DO (west of Building 1), AP12-DO (east of Building 3) and OB35-DO (beneath Building 5), and also included bedrock wells OB25-BR (west of Building 1) and OB27BR (southwest corner of Building 7). Well locations are illustrated on **Figures 2 and 3**.

The 2012 permanganate injection program was initiated on July 25, 2012 and will continue into the next reporting period. Volumes of sodium permanganate injected during this reporting period are summarized on **Table 1**. The permanganate solution was applied to the target wells manually under gravity flow conditions. Monitoring of the permanganate treatment program continued during this reporting period and results are discussed in later sections of this report.

During this reporting period, 40 percent sodium permanganate solution was delivered to the Site in 250 gallon totes which were stored in an on-site shed with secondary containment. Prior to conducting treatment activities, the permanganate was diluted to an approximate 20 percent solution. A tote placed in the bed of a pickup truck was used to transport the 20 percent permanganate solution to the majority of individual injection wells and then allowed to flow by gravity into the wells. Application of permanganate at select well locations and at wells located inside facility buildings was performed by transferring the 20 percent permanganate solution into 5-gallon containers which were manually transported to a well.

The permanganate totes, drums, hoses, portable containers, pumps, and associated equipment were periodically inspected during this reporting period to ensure no leaks occurred. Additionally, the spill containment features of the storage shed were inspected periodically during this monitoring period. No problems or releases were reported.

## 2.2 Bioremediation Injection and Monitoring Activities

The original bioremediation program proposed for a portion of the Site was detailed in the October 2006 ROS report and included treatment at eight wells in the Building 9 area near the Unnamed Stream as shown on **Figure 3**. As discussed in previous status reports, the bioremediation program has been periodically modified based upon site conditions and monitoring results. Prior to this reporting period bioremediation consisted of the injection of lactate. As detailed in the April 2012 ROS report, adjusting to emulsified vegetable oil (EVO) as a carbon source for reductive dechlorination was recommended to decrease the frequency of treatment applications.

During this reporting period, EVO application was performed in July 2012 at shallow overburden wells BW-2, BW-5, BW-8, BW-9, OB9-S and OB15-S to facilitate continued complete reductive dechlorination of residual VOC daughter products in the area. In addition to these wells, EVO applications were also performed at nearby well MW-9 and BW-6 due to low injection flow in OB15-S and OB9-S. During each injection event, EVO was mixed with potable water to an appropriate dilution in plastic 55-gallon drums and applied into target wells manually under gravity flow conditions. Additional potable water was then injected after injection of EVO to help distribute the carbon source over a larger area of the aquifer. A summary of the volume of EVO and flush water injected during this reporting period is provided in **Table 2**.

The emulsified vegetable oil drums, hoses, portable containers, pump, and all associated equipment were periodically inspected during injection activities. No problems or releases were noted.

Bioremediation injections in the deep overburden wells near Building 3 (AP13-DO, AP23-DO, and AP24-DO) were not conducted during this reporting period. Plans to conduct additional bioremediation in the deep overburden aquifer in this area have been postponed to assess if a permanganate re-circulating system would be more effective at treating deep overburden VOC impacts beneath Building 3 (see Section 4.1).

## 2.3 Sampling at Off-Site Tozer Road Properties

### 2.3.1 Soil Vapor Sampling 30 Tozer Road

As discussed in the previous ROS report, groundwater analytical data from monitoring well OB42-S at 30 Tozer Road indicated concentrations of TCE, tetrachloroethene (PCE), and cis-1,2,- dichloroethene (DCE) above GW-2 standards in October 2011. In addition, analytical results of the sub-surface vapor sample collected outside the 30 Tozer Road building footprint in January 2012 adjacent to OB42-S indicated a concentration of TCE that suggested additional assessment of potential indoor air impacts was warranted (SV-3 30 Tozer, see **Figure 4**). Based on these detections in groundwater and subsurface soil vapor, Shaw installed one soil vapor monitoring point (SV-4 30 Tozer) inside the building located at the 30 Tozer Road property on May 11, 2012. Installation of soil vapor point SV-4 30 Tozer consisted of coring a hole through the concrete floor slab and driving a three quarter inch diameter metal probe using hand tools to a depth of approximately 1.5 feet below the floor. The annular space around the soil vapor point was sealed to prevent short circuiting and was finished with a flush-mounted road

box. The location of the soil vapor point inside the 30 Tozer Road building (SV-4 30 Tozer) is shown on **Figure 4**.

One sub-slab soil vapor sample was collected from beneath the 30 Tozer Road building at SV-4 30 Tozer on May 16, 2012 using an evacuated Summa® canister over a period of approximately two hours. This sample was submitted to ALS Environmental (ALS, formerly known as Columbia Analytical Services, Inc.) for analysis of VOCs by Environmental Protection Agency (EPA) Method TO-15. A complete copy of the Laboratory analytical report is included in **Appendix B**. Analytical results of the sub-surface vapor samples collected outside and inside the 30 Tozer Road building are summarized in **Table 3** along with results from outside the building. Results of VOC analysis have been compared to Commercial/Industrial Sub-Slab Soil Gas Screening Values from the MADEP Interim Final Vapor Intrusion Guidance (WSC#-11-435; MADEP, 2011). As indicated in **Table 3**, TCE was detected in the sub-slab soil vapor sample collected from SV-4 30 Tozer in May 2012 at a concentration of 3,300 micrograms per meter cubed ( $\mu\text{g}/\text{m}^3$ ) compared to a screening value of 140  $\mu\text{g}/\text{m}^3$  and PCE was reported at a concentration of 1,100  $\mu\text{g}/\text{m}^3$  versus a screening level of 290  $\mu\text{g}/\text{m}^3$ . These results indicate additional evaluation of potential indoor air exposure at 30 Tozer Road is warranted and is further discussed in Section 4.5.1.

### **2.3.2 Groundwater Sampling at 39 Tozer Road**

Groundwater analytical results from first two sampling events in 2011 at OB41-S, located approximately 30 feet from the north end of the 39 Tozer Road building (**Figure 2**), indicated concentrations below GW-2 standards for detected VOCs except TCE. TCE was detected at a concentration of 0.12 milligrams per liter (mg/L) in October 2011, which is above the GW-2 standard of 0.030 mg/L. Another groundwater sample was collected from OB41-S in April 2012 and submitted to ALS Environmental for analysis of VOCs by EPA Method 8260B. Analytical results are summarized and compared to MCP GW-2 Method 1 standards in **Table 4**. The detected concentrations of TCE in groundwater samples collected from OB41-S were 0.26 mg/l in April 2011, 0.12 mg/l in October 2011 and 0.069 mg/l in April 2012 versus a GW-2 standard of 0.03 mg/l. Although these results suggest a decreasing trend, the April 2012 TCE concentration remains above the GW-2 standard. Therefore, consistent with MADEP policy (MADEP, 2011), additional evaluation of potential indoor air exposure at 39 Tozer Road is warranted and is further discussed in Section 4.5.2.

## **2.4 Monitoring of Groundwater Physical Parameters**

The Phase IV Plan detailed monitoring activities for the various permanganate treatment areas of the Site. As discussed in previous monitoring reports, monitoring activities have been adjusted, based upon changing site conditions. Groundwater physical parameters were monitored biweekly during permanganate injection in select monitoring wells in active treatment areas. Monitoring activities typically completed for the permanganate treatment program include:

- visual observation of groundwater color for identification of residual permanganate;
- depth-to-groundwater measurements; and
- measurement of oxidation-reduction potential (ORP), and pH using a down-well water parameter probe (if no residual permanganate is observed, which could damage the probe).

Groundwater monitoring completed as part of the bioremediation program was conducted concurrently with sampling events and included measurement of ORP, dissolved oxygen (DO), pH, and conductivity.

Results of water quality parameter measurements collected from monitoring wells during this reporting period are presented in **Appendix C**.

Depth to groundwater measurements (**Appendix C**) collected during the April 2012 sampling event were used to develop groundwater contour maps for the shallow overburden, deep overburden, and bedrock aquifers (**Figures 5, 6, and 7**). These figures show that the majority of Site groundwater in each aquifer generally flows to the west/southwest, following the regional groundwater flow pattern, which is south and west toward Shoe Pond and the Bass River. The gradient in each aquifer is moderate to steep east of Tozer Road and very flat to the west of Tozer Road. There are indications of limited northerly groundwater flow in the contours at the northern end of the Site. Overall, the groundwater gradients shown on these figures are consistent with historical data from the Site.

## 2.5 Groundwater and Surface Water Sampling

### 2.5.1 Sample Collection and Analysis

Groundwater sampling to monitor the progress of both the permanganate and bioremediation programs was conducted in April 2012 and August 2012 during this reporting period. The April 2012 sampling event monitored VOC trends and groundwater conditions at select wells across the Site. The August 2012 sampling event was a more limited scope focused on monitoring bioremediation progress following the July 2012 injection of EVO. A summary of samples collected during these monitoring events and sampling rationale is provided on **Tables 5A and 5B**. These sampling events also included select stream surface water locations previously requested by the Beverly Conservation Commission in various Orders of Condition (Beverly, 2002; 2003; 2004). Sampling locations are shown on **Figure 2**.

Groundwater VOC sampling of monitoring and application wells during this reporting period utilized passive diffusion bag (PDB) samplers, with the exception of stream monitoring points and certain wells where alternative sampling methods were used, as discussed below. For wells sampled utilizing the PDB method, the sampling apparatus was deployed in each groundwater monitoring well for a minimum two-week equilibration period, after which the samples were collected.

Depth-to-groundwater, total-well-depth measurements, and gauging for potential dense non-aqueous phase liquid (DNAPL) at selected wells were performed when the PDB samplers were deployed. The electronic interface probe used during these monitoring activities did not detect DNAPL at monitoring wells gauged during this reporting period. Water level monitoring data from the April 2012 and August 2012 sampling events are summarized in **Appendix C**.

Monitoring wells BR-1, BR-3, BR-5, BR-6, BR-7, CL8-BR and CL9-BR are bedrock wells utilizing a packer system in order to provide discrete groundwater sampling from three separate fracture zones. These wells use a Waterloo™ system, which collects groundwater samples in each packer zone by using dedicated dual-valve pumps driven by compressed nitrogen. Surface water stream samples were collected directly from the sample locations with a bailer or laboratory-supplied containers.

At locations where analyses of dissolved metals (manganese and/or iron) and chloride were performed, samples were collected using a conventional bailer, since these constituents cannot be accurately assessed using PDB samplers. Dissolved manganese and iron samples were field-filtered using a 0.45-micron filter prior to analysis consistent with MADEP policy.

Groundwater and surface water samples were submitted to ALS Environmental for analysis of VOCs (by EPA Method 8260B), dissolved iron and manganese, methane, ethane, ethene, metabolic acids (in April 2012), total organic carbon (in August 2012), and chloride as outlined on **Tables 5A and 5B**. Additionally, groundwater samples collected from select bioremediation wells were submitted for analysis of *Dehalococcoides sp.* bacteria (DHC) at Shaw's Technology Development Laboratory in Knoxville, Tennessee.

During the April 2012 sampling event, groundwater samples from select injection and monitoring wells were also collected for bench-top colorimetric permanganate concentration analysis. These groundwater samples were field filtered using a 0.45-micron filter prior to permanganate concentration analysis. Samples that were collected for colorimetric analysis of residual permanganate were analyzed by Shaw using a Hach DR/890 colorimeter. The colorimeter utilizes a spectrophotometric method to determine the permanganate concentration based on a permanganate color calibration standard.

VOC analytical results from the April and August 2012 sampling events are summarized on **Table 6**. Results of chloride, iron, and manganese samples collected during the sampling events are summarized on **Table 7**. Results of bioremediation parameter analysis (i.e., methane, ethane, ethene, total organic carbon, and DHC bacteria) are summarized on **Table 8**. Complete laboratory analytical reports for samples collected in April 2012 and August 2012 are provided in **Appendix B**. Results of bench-top colorimetric analysis of residual permanganate are included in **Table 9**. Sampling results are discussed below.

### **2.5.2 Quality Assurance/Quality Control (QA/QC)**

In general, the environmental data collected by Shaw during these remedial monitoring activities meets the "presumptive certainty" criteria described in MADEP guidance (MADEP, 2004a). Based on a data usability assessment of the laboratory analytical reports, the data are appropriate for use in this ROS report. The laboratory reports were reviewed by Shaw to determine if samples were analyzed within holding times and to ensure that surrogate recoveries and internal laboratory standards were within QA/QC limits. Copies of Data Usability Worksheets that document this review are included with each laboratory analytical report in **Appendix B**. If applicable, results from samples reported beyond the calibration range of the laboratory instrument are flagged with an "E" (estimated) qualifier in the laboratory analytical report and associated data tables in this report. However, these samples were reanalyzed by the laboratory as a secondary diluted sample. A "D" (diluted) qualifier in the laboratory analytical report and on the data tables indicates compounds that are reported from a secondary diluted sample.

QA/QC issues identified during this reporting period included continuing calibration criteria in ALS Environmental laboratory submission number R1202267. The continuing calibration criteria were met for all analytes except for the following: 1,2-dichloroethane, carbon tetrachloride, and cis-1,3-dichloropropene. Positive results associated with these compounds in submission number R1202267

should be considered as estimated; however, since no positive detections were reported, the data were not affected.

In summary, no data collected during this reporting period were rejected and the data generally meet the QA/QC requirements of the MCP.

### **2.5.3 VOC Monitoring Results**

In general, the analytical results of groundwater samples collected during the April and August 2012 sampling events (**Table 6**) show decreasing or consistent concentrations of TCE and PCE monitoring wells across the Site. However, concentrations of cis-1,2-DCE have been more variable. This variability may be due to the higher mobility of cis-1,2-DCE in groundwater compared to TCE and PCE and the generation of this daughter compound during natural attenuation or bioremediation processes.

Graphs illustrating concentration trends over time for TCE, PCE, cis-1,2-DCE, TCA, and vinyl chloride for numerous injection and monitoring wells are provided in **Appendix D**. Graphs for shallow overburden, deep overburden, and bedrock monitoring wells that are located in proximity to each other are grouped together for comparative purposes. These graphs indicate that data from many of the wells monitored continue to show decreasing concentration trends or sustained reductions in VOC concentrations as a result of Varian's remedial activities. These trends indicate that the remedial program is effectively treating groundwater and the Site is progressing toward a Permanent Solution as defined by the MCP.

Analytical results of target VOCs from the April 2012 groundwater sampling event were used to generate VOC iso-concentration maps for the shallow overburden, deep overburden, and bedrock aquifers (**Figures 8, 9, and 10**, respectively). The "total" VOC numbers consider only concentrations of the Site-related VOCs, which include TCE, PCE, TCA, cis- and trans-DCE, 1,1-dichloroethane (DCA), 1,1-DCE, 1,2-DCA, and vinyl chloride.

Recent groundwater sampling results support the following overall observations regarding the three aquifers present at the Site:

- In the shallow overburden aquifer (**Figure 8**), the April 2012 data demonstrate that there were no wells with a total VOC concentration greater than 10 mg/L. Prior to the start of permanganate injection at the Site in 2002, the area of VOC concentrations greater than 10 mg/L extended over an area from OB9-S by the Unnamed Stream west to AP12-S, located adjacent to the east side of Building 6. A second area of shallow VOCs greater than 10 mg/L was historically observed at AP14-S, adjacent to the north side of Building 3 (Shaw, 2002a). **Figure 8** indicates two isolated areas of total VOCs greater than 1 mg/L now exist in the shallow overburden: in the area of OB15-S, BW-8 and MW-8, by the Unnamed Stream, and a second area that includes OB42-S located northeast of the building at 30 Tozer Road and extends to include GZ-1 and GZ-4 west of Tozer Road.
- In the deep overburden aquifer (**Figure 9**), the April 2012 data demonstrate the area of total VOC concentrations greater than 100 mg/L is limited to beneath Buildings 3 and 6. Prior to the start of permanganate injection at the Site, the area of the deep overburden plume with VOC concentrations greater than 100 mg/L extended significantly further to the west, downgradient from Buildings 3 and 6 to the area just west of Building 7 (Shaw, 2002a). Pretreatment total VOC levels in the Building 5 source area were also greater than 100 mg/L.

However, by January 2006, the total VOC concentrations in the Building 5 area had been reduced through permanganate treatment to approximately 25 mg/L at OB35-DO in April 2012. Total VOC levels in the PSL 10 area to the south of the former Varian facility have been reduced from a concentration greater than 50 mg/L before treatment began in 2002 and have remained reduced during the April 2012 sampling round (1.03 mg/L at AP-19).

However to the west of PSL 10, an elevated total VOC concentration (15.81 mg/L) was noted in well MW2-32Tozer, at the 32 Tozer Road property.

- Before treatment started in the bedrock aquifer in 2002, total VOC concentrations greater than 50 mg/L extended from the Building 3 and 9 areas west nearly to Tozer Road (Shaw, 2002a). The April 2012 data document reduced bedrock levels with total VOC concentrations greater than 10 mg/L, but still less than 50 mg/L beneath and to the west of Building 3 and 6 source areas (**Figure 10**). Pretreatment total VOC concentrations in bedrock along Tozer Road were as high as 10 mg/L. Analytical results from April 2012 indicate that total VOC concentrations in this area along Tozer Road have now been reduced to about 1 mg/L.

In summary, recent groundwater sampling results as shown on **Figures 8, 9, and 10** continue to demonstrate decreases in the concentrations and extent of VOCs in each aquifer. A more detailed discussion of VOC results for the various treatment areas at the Site is presented below.

#### **North of Route 128**

Historically, VOC concentrations in the area north of Route 128 have been low or non-detect in the shallow and deep overburden aquifers. Impacts have been noted in the bedrock aquifer north of Route 128. Permanganate injection has not been performed directly in this area, but source area treatment south of Route 128 was conducted to address downgradient impacts north of the former Varian facility. The groundwater sampling results for the area north of Route 128 demonstrate that:

- At bedrock monitoring well BR-1, a multi-zone bedrock well on Walden Street, VOC concentrations in the shallowest zone (Zone 3) continued to remain non-detect in April 2012. Low concentrations of VOC were present in the deepest sampling zone (Zone 1) and the middle sampling zone (Zone 2) in October 2011, but analytes decreased to non-detect in April 2012.
- At the bedrock well CL9-BR, a multi-zone bedrock well located just north of Route 128 and west of Tozer Road, TCE and PCE concentrations have remained generally consistent, but levels of cis-1,2-DCE continue to fluctuate. The significant fluctuations in cis-1,2-DCE concentrations, a TCE breakdown compound, suggest that some biological breakdown of TCE and/or PCE may be occurring in bedrock in this area.
- At the deep overburden and bedrock well couplet OB17-DO/BR, located on Commons Drive, the April 2012 groundwater sample results continue to indicate an overall decreasing trend in VOC concentrations.
- At bedrock well CL02-BR, TCE and PCE concentrations have remained non-detect since October of 2009, but a low concentration of TCE was detected in April 2012 (0.011 mg/L). Daughter products at CL02-BR continue to show fluctuating concentrations (cis-1,2-DCE was detected at 0.2 mg/l in April 2012).

### **Building 3/6 Treatment Areas**

Permanganate injection was conducted during this reporting period at wells AP12-BR, AP26-DO, OB12-DO, OB27-BR and OB25-BR in the Building 3/6 treatment area as presented in Section 2.1. In addition, bioremediation has continued in the shallow overburden near the Unnamed Stream during this reporting period. Significant target VOC reductions had been maintained at a number of monitoring wells, including AP14-S, AP25-DO, MW-9, MW-9A, OB9-S, OB9-DO, OB10-S, OB19-DO, and OB32-DO. TCE concentrations at these wells have been reduced by as much as 99 percent from historical highs. Groundwater sampling results for this area are summarized below:

- At shallow well OB9-S, located adjacent to the Unnamed Stream, TCE and PCE have decreased from pre-treatment concentrations over 50 mg/L to non-detect in January and August 2012. Low concentrations of the breakdown products were also detected in January and April 2012. EVO injections were conducted in July 2012 to ensure continued breakdown of VOC daughter products and chloroethane (a TCA breakdown product) decreased from 0.27 mg/L in April 2012 to 0.0059 mg/L in August 2012.
- At deep overburden well OB9-DO, TCE and PCE concentrations decreased to non-detect in January 2012 and remained non-detect in April and August 2012. At bedrock well OB9-BR, TCE and PCE levels show an overall decrease since the start of treatment and were non-detect in October 2011 and January 2012. However concentrations of TCE and PCE increased in April 2012, but remained below pre-treatment concentrations. TCE and PCE concentrations remained at a similar level in August 2012 (2.1 mg/L and 1.6 mg/L, respectively). At both OB9-DO and OB9-BR, concentrations of breakdown products vinyl chloride and cis-1,2-DCE exhibit fluctuating levels over recent sampling events. These fluctuations are likely the result of bioremediation.
- In shallow overburden BW wells, adjacent to the Unnamed Stream east of Building 3, EVO application was conducted during this reporting period to continue reductive dechlorination. Sampling results from April and August 2012 indicate the presence of degradation products cis-1,2-DCE, vinyl chloride and ethene at wells BW-4, BW-5, BW-6, BW-8 and BW-9, indicating that complete breakdown of TCE and PCE is continuing in the shallow overburden in this areas. At wells BW-8 and BW-9, decreases in the detected concentrations of 1,1,1-TCA, 1,1-dichloroethane and chloroethane between April and August 2012, along with the presence of ethane, indicate that complete degradation of 1,1,1-TCA is occurring in the shallow overburden in this areas.
- At deep overburden well OB12-DO, located north of Building 3, significant VOC concentration reductions were observed following the 2009 permanganate injections (e.g. 99 percent reduction in TCE). However, concentrations of TCE have rebounded following several permanganate treatment events. Most recently, concentrations of TCE and PCE decreased to non-detect in July 2011 after permanganate injections conducted summer of 2011. TCE concentrations then increased to 37 mg/L in April 2012, once permanganate in the area of OB12-DO was consumed. This concentration represents an approximate 70 percent reduction from the highest detected TCE concentration at OB12-DO, but the April 2012 VOC concentrations were above the remedial planning criteria and further treatment was determined to be warranted. Permanganate injections were conducted at OB12-DO during the 2012 treatment period and groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.
- At shallow well OB15-S, adjacent to the Unnamed Stream east of Building 3, PCE and TCE concentrations have decreased significantly since January 2009, when they were 6.1 mg/L and 4.3 mg/L, respectively. In April 2012, PCE and TCE remained non-detect. Breakdown products cis-1,2-DCE and vinyl chloride are present and EVO injections were conducted in

July 2012 to enhance further dechlorination. In August 2012, PCE and TCE remained non-detect and daughter products showed a decrease. For example, cis-1,2-DCE decreased from 1.4 mg/L in April 2012 to 0.024 mg/L in August 2012.

- At deep overburden well OB19-DO, located just west of Building 1, concentrations have been relatively consistent since the order of magnitude decrease in TCE and PCE was observed in July 2010. Concentrations of TCE and PCE were 3.1 mg/L and 0.8 mg/L, respectively, at this well in April 2012.
- At bedrock well OB25-BR, located west of Building 1, the concentrations of cis-1,2-DCE and vinyl chloride detected in April 2009 increased and remained elevated in July and October 2010. Because the detected concentration of cis-1,2-DCE at this well was above the remedial planning criterion (67 mg/L in October 2010), permanganate treatment was conducted at OB25-BR in January and February 2011. In response to this treatment, concentrations of VOC reduced to non-detect in April 2011. VOC concentrations increased at OB25-BR as the permanganate was consumed by VOC destruction and in April 2012, the cis-1,2-DCE concentration was 30 mg/L, above remedial planning criteria. Permanganate injections were conducted at OB25-BR during the 2012 treatment period and groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.
- Bedrock well OB27-BR, located near the south west corner of Building 7, received permanganate injection in 2010 and early 2011 to address increased concentrations of VOCs. As a result of this treatment, TCE, PCE, and cis-1,2-DCE concentrations were reduced significantly in April 2010, were non-detect in October 2010, and only indicated a low concentration of PCE in April 2011 (0.0026 mg/L). In October 2011, VOC concentrations showed an increase with PCE detected at 7.4 mg/L and TCE present at 22 mg/L, both similar to historic high levels. The TCE concentration remained similar in April 2012 (20 mg/L) and therefore it was determined that further treatment was warranted. Permanganate injections were conducted at OB27-BR during the 2012 treatment period and groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.
- Deep overburden well OB34-DO, located just north of Building 3, last received permanganate treatment in August 2009. Although permanganate addition was not conducted in 2010, the TCE concentrations decreased at this well in October 2010 and remained relatively low in April 2011, suggesting that benefits of permanganate injections at nearby wells AP30R-DO, AP31-DO and AP32-DO were being observed in the area of OB34-DO. In October 2011, the TCE concentration increased to 11 mg/L, but remained below the remedial planning criteria. The TCE concentration decreased slightly in April 2012 to 8.5 mg/L. Groundwater sample results from October 2012 will be evaluated to assess if the benefits of treatment are still being observed at OB34-DO.
- Deep overburden well OB36-DO, located beneath the Building 6 loading dock, last received permanganate treatment in 2005. VOC concentrations at this well have been relatively consistent over recent sampling events with TCE detected at 10 mg/L in April 2012. This represents an approximate 90 percent reduction from the historic TCE concentration at OB36-DO. Since April 2008, with the exception of October 2009, VOC levels at OB36-DO have remained below the remedial planning criteria and it appears that additional treatment at this well is not warranted at this time.
- At deep overburden well AP12-DO, located near the south east corner of Building 6, permanganate treatment was conducted in 2004 and TCE concentrations remained non-detect until residual permanganate from treatment in the Building 6 area was consumed and an increase was observed in April 2010. Although the concentrations of TCE and PCE at

AP12-DO were higher, they remained below the remedial planning criteria until October 2011, when the TCE concentration increased to 27 mg/L. The TCE concentration increased further in April 2012, to 39 mg/L. This TCE level suggested that further treatment was warranted and permanganate injections were conducted at AP12-DO during the 2012 treatment period. Groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.

- At deep overburden well AP13-DO, located at the northeast corner of Building 3, bioremediation has reduced but not been successful in maintaining lower VOC concentrations in groundwater. TCE and PCE concentrations increased in October 2011 and again in January 2012 as the lactate was consumed by biologic activity. In April 2012, the TCE concentration at AP13-DO was 320 mg/L and the PCE level was 59 mg/L. These levels are well above the remedial planning criteria, indicating that further treatment is warranted. Additional bioremediation in this area has been postponed to assess the possible implementation of a permanganate re-circulating system to treat deep impacts below Building 3.
- At deep overburden well AP23-DO, located adjacent to Building 3, bioremediation has been able to reduce VOC concentrations, but these decreases have not been maintained. Following the 2011 treatment program, TCE and PCE concentrations increased in October 2011 and in January 2012 as the lactate was consumed by biologic activity. In April 2012, the TCE concentration at AP23-DO was 350 mg/L and the PCE level 21 mg/L. The TCE concentration is well above the remedial planning criteria, indicating that further treatment is warranted. Further bioremediation in this area has been postponed to assess potential implementation of a permanganate re-circulating system to treat deep impacts below Building 3.
- At deep overburden well AP24-DO, located adjacent to Building 3, bioremediation has been more successful at reducing VOC concentrations. For example, the concentration of TCE at this well decreased from 300 mg/L in April 2011 to 16 mg/L in July 2011, after additional lactate injection. However, as with other deep overburden wells in this area, once the lactate in the area was consumed, VOC concentrations increased and in April 2012 the TCE concentration was 240 mg/L. The TCE level is well above the remedial planning criteria, indicating that further treatment is warranted. Further bioremediation in this area has been postponed to assess the potential implementation of a permanganate re-circulating system to treat deep impacts below Building 3.
- Deep overburden well AP26-DO, located west of Building 2, last received permanganate treatment in 2004. Concentrations of VOCs at this well have fluctuated over recent sampling events, with the level of TCE detected near the remedial planning criteria. In April 2012, the concentration of TCE was 27 mg/L and the level of PCE was 11 mg/L. It was expected that the permanganate injections conducted in summer 2011 in the upgradient Building 3 source area (e.g. AP30R-DO) would reduce VOC levels in the area of AP26-DO. The April 2012 results indicate that this benefit has not been observed. Therefore, permanganate injections were conducted at AP26-DO during the 2012 treatment period. Groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.
- Deep overburden wells AP30R-DO, AP31-DO and AP32-DO, located just north of Building 3, responded well to the permanganate treatment conducted in 2010 and 2011. Concentrations of TCE and PCE at AP30R-DO have decreased from 680 mg/L and 59 mg/L, respectively to non-detect in November 2011 and remained non-detect in April 2012. Residual permanganate continues to be present at this location. Concentrations of TCE in AP31-DO decreased from a pretreatment concentration of 940 mg/L to non-detect in November 2011 and PCE decreased from 71 mg/L in February 2010 to 0.043 mg/L in November 2011. However, as

permanganate has been consumed by VOC destruction, the concentrations have increased in AP31-DO. For example in April 2012 TCE was detected at 43 mg/L and PCE was present at 1.9 mg/L. Concentrations of VOCs exhibited a significant decrease after treatment in AP32-DO, for example TCE decreased from 950 mg/L pre-treatment concentration to 0.15 mg/L in April 2011. However, as permanganate in the area has been consumed, TCE increased and was detected at 140 mg/L in April 2012. The concentrations of TCE at AP31-DO and AP32-DO are above the remedial planning criteria, indicating that further treatment is warranted. Implementation of a permanganate re-circulating system to treat deep impacts below Building 3 is being evaluated.

- Deep overburden well MW-13, located north of Building 3 adjacent to Route 128, received permanganate injections in 2010 and early 2011. Significant reductions in PCE and TCE were observed in April 2010 in response to the permanganate treatment. These reductions were maintained in April 2011, when the TCE concentration was 0.0075 mg/L and the PCE concentration was 0.062 mg/L. Data showed continued lower VOC concentrations, with TCE non-detect in April 2012. TCE and PCE concentrations reflect a greater than 99 percent reduction from the levels detected in April 2009.
- In the stream adjacent to Building 9, the Unnamed Stream sample location indicated fluctuating concentrations of VOCs. This is expected due to the continuing bioremediation being conducted in the adjacent shallow groundwater aquifer. Just downstream at the STR-3 stream sample location, TCE and PCE were below detection limits for the six sampling events from July 2010 to October 2011. Low concentrations of PCE and TCE were detected at STR-3 in January 2012 (0.011 and 0.02 mg/L, respectively). Concentrations returned to non-detect in April 2012 and August 2012. The non-detect and low levels of VOCs detected at STR-3 indicate that fluctuations in surface water VOC concentrations are limited to the area immediately adjacent to the active bioremediation treatment zone. The continued presence of ethene in adjacent shallow well samples indicates that complete VOC degradation is occurring.

### ***Building 5 Treatment Area***

Permanganate application in the Building 5 treatment area was conducted at well AP27-DO in 2004 and 2005, and at OB-35DO from 2005 to 2008, in 2011 and in 2012. The most recent groundwater sampling results for this area demonstrates that:

- VOC concentrations at well AP27-DO remain below prior concentrations and the remedial planning criteria, suggesting additional treatment is not warranted. In April 2012, TCE and PCE were detected at 13 mg/L and non-detect, respectively.
- The PCE concentration at well OB35-DO increased in October 2010 to 34 mg/L and remained similar in April 2011 (32 mg/L), which is above the baseline concentration. Additional treatment was conducted during the summer 2011 treatment period. October 2011 analytical results showed a slight decrease in concentrations of PCE to 29 mg/L and in April 2012, the PCE concentrations decreased but remained above baseline (19 mg/L vs. 3 mg/L). The concentration of TCE at OB35-DO was 5.4 mg/L in April 2012, reflecting reduction from 440 mg/L in May 2005. Permanganate treatment was conducted during the 2012 treatment period to reduce PCE concentrations and groundwater sample results from October 2012 will be evaluated to assess if additional treatment is warranted.
- TCE and PCE concentrations at deep overburden well OB38-DO, located on the east side of Building 5, have been relatively consistent over recent sampling events. In April 2012, TCE was detected at 0.46 mg/L and PCE was present at 0.47 mg/L. The detected VOCs at this well are below prior concentrations and the remedial planning criteria.

### **PSL 10 Treatment Area**

This area is located to the south of the main buildings, adjacent to the 32 Tozer Road property. Permanganate injection was conducted in this area from 2002 to 2004 and 2006 through 2008. Additional permanganate injections were conducted in this area at wells AP-19 and AP-22 during the summer 2011 treatment period. The most recent groundwater sampling results for this area demonstrate that:

- VOC concentrations at shallow overburden well CL10-S, located just downgradient of PSL 10 on the 32 Tozer Road property, continued to exhibit seasonal fluctuations. For example, in October 2011, concentrations of PCE decreased to 0.045 mg/L from 0.87 mg/L in April 2011. Then, in April 2012, the concentration of PCE increased to 0.13 mg/L. Over recent years, the magnitude of the increases observed in April have generally decreased.
- VOC levels were non-detect in April 2012 at deep overburden well CL10-DO and decreased to non-detect at bedrock well CL10-BR.
- Concentrations of VOCs at wells AP-19, AP-20, AP-21, and AP-22 responded well to the permanganate treatment completed through 2008. Based on increased VOC concentrations above baseline levels in April 2011 and to provide additional benefits to the downgradient areas at 32 Tozer Road, additional treatment was conducted in this area during the summer of 2011. In April 2012, concentrations of TCE and PCE in groundwater remained non-detect at AP-21 and AP-22. Concentrations of PCE and TCE in AP-19 and AP-20 continue to fluctuate but are below historic high concentrations. For example, TCE was detected at 0.1 mg/L at AP-20 in April 2012 versus a high of 1.6 mg/L in June 2002.
- Concentrations of VOCs at deep overburden monitoring well MW2-32Tozer, located west of AP-21 and AP-22 on the 32 Tozer Road property, have been generally consistent over the three sampling events conducted at this well. PCE has been detected at the highest concentrations at MW2-32Tozer over the three sampling events and was present at 12 mg/L in April 2012. This concentration is comparable to the levels observed at deep overburden well CL10-DO prior to the start of treatment in PSL 10 (e.g. PCE was present at 9.2 mg/L in May 2003). VOC concentrations detected at deep overburden wells MW1-32Tozer and MW3-32Tozer are lower compared to MW2-32Tozer. For example, to the northwest, at MW1-32Tozer, the PCE concentration was 0.0067 mg/L in April 2012 and to the southwest, at MW3-32Tozer, the PCE level was non-detect in April 2012. The three shallow wells downgradient of the building at 32 Tozer Road (OB24-S, MW4-32Tozer and MW5-32Tozer) have generally indicated low to non-detect VOC concentrations. For example, VOCs were non-detect at OB24-S in April 2012 and the highest VOC concentration detected at MW5-32Tozer was TCE at a concentration of 0.019 mg/L.

### **Tozer Road Treatment Area South of 128**

No permanganate injections have been performed at 28 Tozer Road since 2006. The most recent groundwater sampling results for this area demonstrate that:

- VOCs concentrations at wells OB5-S (27 Tozer Road) have exhibited a decreasing trend since April 2007 and in April 2012 only indicated a low concentration of TCE (0.0024 mg/L) above the reporting limits. At the adjacent deep overburden well OB5-DO, VOC concentrations increased until April 2011, but showed a slight decrease in both October 2011 and April 2012. For example, the concentration of TCE decreased from 3 mg/L in April 2011 to 1.8 mg/L in April 2012. At bedrock well OB5-BR, TCE and PCE concentrations have

generally been non-detect since 2004 and the concentration of cis-1,2-DCE has decreased from 1.2 mg/l in April 2010 to 0.0069 mg/L in April 2012.

- Well OB43-S was installed at 27 Tozer to assess compliance with GW-2 standards at this property. VOC results at this well were non-detect in April 2012.
- At deep overburden monitoring well OB6-DO, located 300 feet west of Tozer Road at Sonning Road, the TCE, PCE and cis-1,2-DCE concentrations have fluctuated over recent events. The frequency of the variations in VOC concentrations at this well suggest seasonal fluctuations. VOC concentrations at OB6-BR have been generally consistent over recent sampling events, but overall exhibit a decreasing trend.
- At shallow monitoring well W-1, located at 30 Tozer Road, VOCs remained had been relatively stable at low concentrations over recent sampling events, but increased in April 2012. For example, the TCE increased from 0.0066 mg/L in October 2011 to 1 mg/L in April 2012.
- Well OB42-S was installed at 30 Tozer just downgradient of W-1 to assess compliance with GW-2 standards at this property. VOC results from this well in April 2012 indicate the presence of TCE, PCE, and cis-1,2-DCE at concentrations of 2.4 mg/L, 0.078 mg/L and 0.94 mg/L, respectively. These concentrations are generally consistent with the level observed in the previous two sampling events in April 2011 and October 2011 at OB42-S.
- At deep overburden well CL3-DO, located at 28 Tozer Road, detected concentrations of VOCs had been generally low since 2009, until April 2012, when TCE and PCE concentrations showed an increase. TCE increased from 0.0089 mg/L in October 2011 to 15 mg/L in April 2012 and the PCE increased from non-detect to a concentration of 6 mg/L. The concentrations of TCE and PCE remain below remedial criteria, but the October 2012 groundwater sampling results from this well will be reviewed to determine if any further response actions are needed. VOC results at the adjacent shallow well CL3-S remained consistent at low concentrations in April 2012 (e.g. TCE was detected at 0.0075 mg/L).
- BR-5 is a multi-zone bedrock well located at 28 Tozer Road. The VOC concentrations in the middle sample interval (Zone 2) and the deepest sample interval (Zone 1) at this well illustrate a general decreasing trend since the start of treatment in 2002. In the shallowest sample interval (Zone 3), VOCs concentrations indicated an overall decreasing trend until the April 2011 sampling event, when an increase was observed. The most significant increase in Zone 3 was the concentration of cis-1,2-DCE, which increased from 0.18 mg/L to 5 mg/L. Several detected VOCs decreased in April 2012, most notably the concentration of cis-1,2-DCE, which decreased from 5 mg/L to 0.83 mg/L.

### **31 Tozer Road Treatment Area**

Shallow groundwater treatment was conducted in 2002 and 2003 and deep overburden permanganate injection occurred in this area in 2004. The most recent groundwater sampling results for this area demonstrates that:

- Several wells are monitored at 31 Tozer Road to assess shallow overburden impacts. Concentrations of VOCs in AP15-S continued to remain non-detect in April 2012. VOCs continue to remain low in April 2012 at OB18-S, where TCE was detected at a concentration of 0.0049 mg/L and PCE was non-detect. At shallow well GZ-4, concentrations of TCE and PCE are fluctuating. The concentrations of TCE and PCE detected at GZ-4 in April 2012 were 0.84 mg/L and 0.14 mg/L, respectively, and exhibited an increase compared to the last sampling event in October 2011.

- In deep overburden well OB18-DO, located at 31 Tozer Road, the TCE and PCE concentrations have fluctuated since April 2010, but the range of the fluctuation has been relatively small. For example, the concentration of TCE has ranged from a high of 0.7 mg/L in April 2010 to low of 0.16 mg/L in October 2011. At OB8-DO, located at 39 Tozer Road, levels of VOC have remained relatively consistent for several years. In April 2012, TCE and PCE were detected at concentrations of 2.5 mg/L and 0.37 mg/L, respectively.
- Shallow well OB8-S, located at 39 Tozer Road, was also sampled to assess shallow overburden impacts. VOC concentrations at this well have been relatively consistent over a number of years, with the TCE present at 0.28 mg/L and cis-1,2-DCE present at 0.1 mg/L in April 2012.
- Well OB41-S was installed at 39 Tozer just downgradient of OB8-S to assess compliance with GW-2 standards at this property. VOC results from OB41-S in April 2012 indicate VOC concentrations that are lower than the concentration noted at OB8-S. For example, TCE was detected at OB41-S at 0.069 mg/L compared to 0.28 mg/L for this compound at OB8-S.
- Stream points STRHA-7A (Stream A on the 39 Tozer Road property) and STRHA-7B (Unnamed Stream on the 39 Tozer Road property) are sampled to monitor VOC impacts to surface water. Detected VOC concentrations at these sample points continue to fluctuate, but remain relatively low. For example, TCE was detected at a concentration of 0.03 mg/L at STRHA-7A and 0.019 mg/L at STRHA-7B in April 2012.

#### ***Longview/Hill Street Treatment Area***

In the Longview/Hill Street area, permanganate injections were conducted at wells AP3-DO and AP4-DO during 2004, and at AP3-DO and AP3-BR in 2005. The most recent groundwater sampling results for this area demonstrate that:

- Several monitoring wells in this area of the site are sampled to assess shallow overburden impacts. These include well P-11R on Longview Terrace, P-19A on Hill Street just south of Longview Road, P-20R east of Longview Terrace, and OB20-S by Stream A, south of Sonning Road. VOCs remained non-detect at shallow wells P-11R, P-20R and OB20-S in April 2012. At well P-19A, concentrations of PCE, TCE, and cis-1,2-DCE have remained relatively consistent and at low levels, with cis-1,2-DCE detected at the highest concentration (0.29 mg/L in April 2012).
- Concentrations of VOCs in deep overburden wells OB20-DO and OB21-DO have been generally consistent over the last few years. Along the western edge of the plume at OB20-DO, the concentration of cis-1,2-DCE has typically been higher (0.47 mg/L in October 2011), but VOCs decreased to non-detect in April 2012. At OB21-DO, the level of TCE detected continues to be generally higher (1 mg/L in April 2012).
- For a number of years, the concentrations of VOCs detected in bedrock well OB20-BR had typically been below detection limits, except 1,1-dichloroethane. However, since October 2010, the concentration of 1,1-dichloroethane has been non-detect and low concentrations of other VOCs have been present. For example, in April 2012, TCE was detected at a concentration of 0.024 mg/L and cis-1,2-DCE was present at 0.19 mg/L. VOC concentrations detected at bedrock well OB21-BR have been generally consistent over recent sampling events, with cis-1,2-DCE typically detected at the highest concentrations (1.5 mg/L in October 2011). However, in April 2012, VOCs at OB21-BR were non-detect with the exception of cis-1,2-DCE, which was detected at a concentration of 0.49 mg/L.

- Concentrations of TCE and PCE have been non-detect in the three sampling zones at bedrock monitoring well BR-6, located at the east end of Hill Street, since 2009. As indicated by the VOC graph for each zone, the detected concentrations of cis-1,2-DCE have fluctuated in each zone at BR-6, but generally indicate a decreasing overall trend. Cis-1,2-DCE in April 2012 was detected at a concentration of 0.0035 mg/L in the deepest zone (Zone 1) and at a concentration of 0.019 mg/L in middle zone (Zone 2).
- At stream monitoring point STRM-A-SCDS (located east of Longview Terrace), the VOC concentration remained low in April 2012. TCE was detected at 0.017 mg/L and PCE was detected at 0.0048 mg/L.

#### **2.5.4 Permanganate Parameter Monitoring Results**

Permanganate application occurred during this reporting period as outlined in Section 2.1 and **Table 1**. Sampling for analytical parameters associated with permanganate treatment during this monitoring period was completed in April 2012, before treatment was initiated as part of the 2012 treatment program. In addition, groundwater samples were collected from select wells in April 2012 for bench-top colorimetric permanganate concentration analysis, before the 2012 permanganate injections began. The permanganate analysis results are provided in **Table 9**. As would be expected, samples from wells where permanganate injection was conducted in 2011 indicated residual permanganate was present. For example, permanganate was detected at 19,000 mg/L in AP12-BR located at the corner of Building 6.

Typically, the dissolved iron concentrations (**Table 7**) are expected to decrease in treatment areas due to the oxidizing nature of permanganate and associated iron precipitation from the treated groundwater. Results of monitoring in areas where permanganate treatment has occurred generally demonstrate low or non-detect dissolved iron concentrations. For example, in AP-22-DO, located in the PSL 10 area, where permanganate injections were conducted during the summer of 2011, dissolved iron was non-detectable October 2011 and April 2012.

Generally, elevated dissolved manganese concentrations (**Table 7**) are noted where unreacted permanganate was observed. For example, at well AP22-DO, located in the PSL 10 area, permanganate was present at approximately 10,000 mg/L in April 2012 and dissolved manganese was detected at 2,030 mg/L in April 2012. Outside of the permanganate treatment areas, dissolved manganese concentrations are generally low or non-detect. At deep overburden well OB19-DO, located adjacent to Building 1 and 2 and downgradient of the permanganate injection area at Building 3, the dissolved manganese concentration was 5.78 mg/L in April 2012.

Baseline chloride concentrations at the site were highly variable (**Table 7**). As a result of permanganate treatment, chloride levels in groundwater are typically increased from the destruction of the chlorinated VOCs. For example, at OB37-DO, located inside Building 6, where residual permanganate has been present in 2011 and April 2012, the chloride concentration has ranged from 438 mg/L to 10,800 mg/L over that period compared to a baseline concentration of 20.9 mg/L in February 2004.

#### **2.5.5 Bioremediation Parameter Monitoring Results**

VOCs and bioremediation parameters in groundwater samples are analyzed quarterly to monitor reductive dechlorination processes. During this reporting period, sampling was conducted in April and

August 2012 in the bioremediation area near the Unnamed Stream and Building 3. These parameters included ORP, DO, methane, ethane, ethene and total organic carbon. These results are provided on **Table 8**.

The previously observed reductions in TCE and PCE concentrations noted in the shallow overburden groundwater near OB9-S and MW-9 located by the Unnamed Stream are the result of reductive dechlorination. The remaining breakdown products present (i.e., cis-1,2-DCE and vinyl chloride) are continuing to degrade further. Observed decreases in the detected concentrations of 1,1,1-TCA in select shallow overburden wells are also the result of reductive dechlorination. Monitoring results that continue to support this conclusion include the following:

- Favorable conditions for reductive dechlorination were established and maintained in the subsurface (dissolved oxygen levels <1.0 mg/L and negative ORP readings).
- Increased or continuing elevated ethene concentrations were observed in well MW-9 and other shallow wells in the Unnamed Stream area. Ethene is the non-toxic end product of complete dechlorination of VOCs, including vinyl chloride.
- Increased or continuing elevated ethane concentrations were observed in well BW-9, and other shallow wells in the area. Ethane is an end product resulting from the complete degradation of 1,1,1-TCA.
- Methane concentrations have increased or remained elevated in OB9-S, MW-9, and other shallow wells in the Unnamed Stream area. The presence of methane is indicative of methanogenic conditions that favor the biodegradation of target VOCs via reductive dechlorination.

April 2011 analytical results showed a healthy *Dehalococcoides* sp. bacteria (DHC) population is present at the Site. However, in August 2012, DHC bacteria were not present above detection limits. According to the laboratory, these samples had potential matrix interference issues and most of the samples could not be properly filtered to isolate the DNA. This appears to be the result of the presence of EVO in the groundwater and may have caused the matrix interference. As the EVO disperses in the aquifer, interference will reduce and collected groundwater samples will be analyzed in the next reporting period.

### **3.0 SIGNIFICANT MODIFICATIONS TO THE OPERATION, MAINTENANCE, AND/OR MONITORING PROGRAM (310 CMR 40.0892 (2)(b))**

The Phase IV Plan (IT, 2001) detailed monitoring activities for the various permanganate treatment areas of the Site. No major modifications to the Monitoring Plan were made during this reporting period. Minor adjustments to the remedial monitoring plan continue to be made as site conditions warrant and as reported in the ROS reports.

Details of the bioremediation monitoring activities have been presented in previous ROS status reports. No major modifications to the bioremediation monitoring plan were made during this reporting period. Minor adjustments to the remedial monitoring plan continue to be made as site conditions warrant.

During this reporting period emulsified vegetable oil was used as a carbon source in place of lactate to increase the effectiveness of treatment and reduce the frequency of applications.

#### **4.0 EVALUATION OF THE PERFORMANCE OF REMEDIAL ACTIVITIES (310 CMR 40.0892 (2)(c))**

As described in the preceding sections, remedial activities are progressing at the former Varian Facility Site in general accordance with the Phase IV Plan (IT, 2001). Consistently lower VOC levels and decreasing VOC concentration trends have been observed at monitoring wells across the Site as a result of the permanganate injection program. In addition, a limited bioremediation program began at the Site in 2006 and has resulted in significant decreases in VOC levels in the targeted shallow overburden wells near the Unnamed Stream. Site data continue to show that the remedial program is treating Site groundwater consistent with remedial objectives.

The following section presents recommendations for additional groundwater treatment at the Site based on an evaluation of recent analytical data, the pilot test conducted in the Building 5 Area and additional data from downgradient properties on Tozer Road.

##### **4.1 Permanganate Treatment**

The permanganate injection program for 2012 was started in July 2012 and was still ongoing at the end of September 2012 with injection volumes for this reporting period presented in **Table 1**. Results of the 2012 injections will be evaluated in the next status report based upon the data collected in the upcoming October 2012 groundwater sampling event. As warranted, additional permanganate treatment may be recommended for 2013 based on the October 2012 groundwater sample results and additional groundwater sampling planned for April 2013.

Varian is currently evaluating whether it would be feasible and appropriate to install a groundwater pumping system that would re-circulate permanganate in the deep overburden beneath Building 3. At other remedial sites, Shaw has had success in treating source areas that had limited direct access through a re-circulating system that uses groundwater pumping on the downgradient side of a source area to pull either permanganate or bioremediation additives through source material. Once groundwater is extracted by the system, additional remedial additives are mixed with the groundwater and it is re-injected upgradient of the source. This type of system not only treats groundwater, but also provides flushing of an otherwise inaccessible source area with cleaner groundwater and remedial additives. As a result, treatment time can be greatly reduced and VOC concentration rebound limited. Due to the elevated VOC concentrations in deep overburden groundwater beneath Building 3, Varian is considering a re-circulating groundwater system that would initially use permanganate. If warranted, bioremediation could be used later as a polishing process to treat 1,1,1-TCA or residual TCE. It is expected that the evaluation of the potential applicability of a permanganate re-circulating system will be completed in the next three to six months. The results of that evaluation and proposed modifications to the remedial measure at the Site will be discussed in the next ROS report in April 2013.

#### **4.2 Bioremediation**

Bioremediation activities were conducted in the summer of 2012 and were described in this ROS report. The bioremediation program appears to have addressed the shallow overburden impact of TCE and PCE in the area of the Unnamed Stream. Based on an evaluation of data through August 2012, active reductive dechlorination is continuing to address residual VOC daughter products in the shallow overburden near the Unnamed Stream. Results from upcoming groundwater sampling events will be used to monitor this program and adjustments will be made to continue dechlorination of VOC daughter products. Bioremediation in the deep overburden near Building 3 has been postponed pending the evaluation of a permanganate re-circulating system in this area.

#### **4.3 Building 3 IRA**

In December 2009, a SVE system was installed and activated by Varian in conformance with the Building 3 Immediate Response Action (IRA) Plan for RTN 3-28531. The SVE system is being operated to reduce soil VOC impacts as well as depress ambient pressure under the Building 3 floor to further control potential vapor intrusion into the building.

Phase II CSA and Phase III Remedial Action Plan reports were submitted for RTN 3-28531 in May 2012 (Shaw, 2012a and Shaw, 2012b). The Phase II report presented new soil analytical data showing residual VOC impacts below Building 3. The Phase II report concluded that a Condition of No Significant Risk has been achieved with the operation of the existing SVE system. The Phase III report identified the operation of the existing SVE system with some minor modifications as the selected remedial alternative for the Building 3 Area. As discussed in the September 2012 IRA Status Report, modifications to the existing SVE system have been made in an effort to focus treatment in the area of residual VOCs in soil beneath Building 3 (Shaw, 2012c).

Based on the data presented in the September 2012 IRA Status Report under RTN 3-28531, the operation of this SVE system is effectively removing VOCs from the subsurface beneath Building 3, mitigating potential migration of vapors into the building, and has eliminated the condition that gave rise to the IRA condition (Shaw, 2012c). It should be noted that, while shallow soil and groundwater impacts are relevant to potential vapor intrusion concerns, permanganate treatment adjacent to Building 3 described in this ROS Status Report has typically focused on treating elevated residual VOCs in deep overburden groundwater. Therefore, the ROS remedial activities which address groundwater clean-up goals in the Building 3 Area are addressed separately from the Building 3 IRA activities that are designed to achieve No Significant Risk in indoor air.

Varian will continue to assess and evaluate the potential indoor air conditions in the area adjacent to and under the northeast corner of Building 3 and conduct appropriate response actions as part of the IRA associated with RTN 3-28531. It is anticipated that modifications to the existing SVE system will focus treatment on recently identified VOC impacted soil and that following additional SVE system operation it will be determined if additional treatment of shallow soil and/or groundwater beneath the building will be required to achieve a Permanent Solution. Once this determination is made, and before the Phase IV deadline for RTN 3-28531 (i.e. May 28, 2013), a Phase IV report detailing the final Remedy

Implementation Plan will be submitted to the MADEP. Once the final Phase IV report for RTN 3-28531 is submitted to the MADEP, the IRA will be closed and that RTN will be linked to the Former Varian Facility Site RTN (3-0485).

#### 4.4 Building 5 and 6

As presented in the previous ROS report, indoor air sampling results do not indicate the presence of an Imminent Hazard or Significant Risk in Building 5 or 6. At Building 6, the estimated hazards are below the MCP limit. The current indoor air sampling data in Building 5 suggest that indoor air concentrations are variable and the estimated hazards are at but do not exceed the MCP risk limit. However, it is likely that a Permanent Solution for the Site may not be achieved without some VOC remediation at Building 5 to reduce potential risk to site workers.

In June 2012, Shaw sealed a utility trench located in Building 5 in an effort to eliminate a potential vapor migration pathway. The utility trench is located in the floor in a room near the Shipping Area and this trench is covered by steel plates. See **Figure 11** for the utility trench location. Accessible portions of the walls and bottom of this utility trench were sealed using Henry CM100 waterproofing membrane.

To evaluate the potential use of SVE to remediate VOCs in vadose zone soil beneath Building 5, Shaw installed three horizontal SVE trench wells in July 2012. The SVE trench wells were installed in accessible locations around the former floor drain system and sump that represent the likely source of sub-surface VOC impacts resulting in indoor air concentrations. The SVE trench wells were installed in the Sanding Room, Shipping Area, and the QA Area in Building 5 (**Figure 11**). During installation of the trench SVE wells, soil beneath the floor was observed to consist of hard packed silty till. Soil was excavated from beneath the concrete floor slab using hand tools and a vacuum truck, and then the soil was transferred to a roll-off container pending characterization. Soil samples were collected periodically during excavation and screened for VOCs using a jar headspace screening method and a photoionization detector (PID). Soil headspace screening results revealed VOC concentrations of up to 52 ppm in the Sanding Room trench, up to 22 ppm in the Shipping Area trench, and up to 22 ppm in the QA Area trench. Trench SVE well BLDG5-SVE1 was completed as an 11 foot horizontal SVE well in the Sanding Room. BLDG5-SVE-2 was installed as a 15.75 foot horizontal SVE well in the Sipping Area and BLDG5-SVE3 was completed as a 15.5 foot horizontal SVE well in the QA Area. Each SVE trench was backfilled with stone and covered with concrete. A more complete discussion of the construction of the three SVE trench wells installed in the Building 5 area will be included in an upcoming Phase III and IV Modification report for RTN 3-0485.

As discussed above, the excavated soils were stored in a roll-off pending characterization for disposal purposes. During transfer of the soil from the vacuum truck to the roll-off container, indications of petroleum impacts to the excavated soil were observed; however, no evidence of petroleum impacts had been noted during excavation activities. Following an inspection of the vacuum truck it was determined that the tank on the truck had not been cleaned well prior to arriving at the Site and the excavated soil had become impacted by residual fuel oil in the truck's tank. A sample of the excavated soil was collected and sent to ALS Environmental for VOC, extractable petroleum hydrocarbons (EPH), total petroleum hydrocarbons (TPH), polychlorinated biphenyls (PCBs), and toxicity characteristic leaching

procedure (TCLP) metals analysis. Analytical results revealed VOC concentrations were non-detect and low levels of TPH were detected. The low TPH impacts are not believed to be related to a release at the Site but from petroleum contamination present in the vacuum truck's tank from a previous load of fuel oil. The excavated soil was subsequently transported off-site for disposal as a non-regulated waste. A copy of the Hazardous Waste Manifest is included in **Appendix E**.

A soil sample was collected from the bottom of the excavations at BLDG5-SVE2 and BLDG5-SVE1 and was submitted for laboratory analysis of VOC by EPA Method 8260B at ALS Environmental. These soil samples were collected using methods consistent with EPA Method 5035 to limit volatilization of target VOC. The analytical reports for the July 2012 soil sampling are included in **Appendix B**. Analytical results of soil samples collected in Building 5 Area in July 2012 are summarized on **Table 10** and indicate VOCs were not detected above the reporting limit.

On September 8, 2012, Shaw conducted a soil vapor extraction pilot test using two of the SVE trench wells to evaluate vapor flow characteristics, VOC recovery, potential groundwater infiltration and radius of influence. The tests were completed by temporarily connecting the wells to a blower with carbon off gas treatment and extracting soil vapor from beneath the building floor. During the SVE pilot test, recovered soil vapor was field screening using a PID and indicated VOC concentrations of up to 62 ppm at BLDG5-SVE1 and 2.6 ppm at BLDG5-SVE2. A soil vapor sample was collected in a Summa canister from the SVE blower effluent during the maximum flow rate phase of each of the two tests. The samples were submitted to ALS Environmental for analysis of VOCs by EPA Method TO-15 and the analytical results are summarized in **Table 11**. A copy of the laboratory report is included as **Appendix B**. As indicated in **Table 11**, TCE was detected in the soil vapor sample collected from BLDG5-SVE1 at a concentration of 240,000 ug/m<sup>3</sup> (44 ppm) and in the soil vapor sample collected from BLDG5-SVE2 at a concentration of 5,800 ug/m<sup>3</sup> (1.1 ppm). Although the data is still being evaluated, preliminary results of the pilot study indicate that an SVE system would be effective at removing VOC from vadose zone soil beneath Building 5 and at limiting potential vapor migration into the building. Complete details of the pilot test will be included in an upcoming Phase III and IV Modification report for the Building 5 Area of the Site. A supplemental Phase III and Phase IV report will be prepared to include SVE as a remedial alternative in the Building 5 area since SVE was not evaluated in the existing Phase III and Phase IV documents completed for RTN 3-0485. Based upon discussions with the MADEP, it is acceptable to implement an additional remedial approach (i.e., SVE).after submitting a supplemental Phase III and IV, and continue concurrently with permanganate and bioremediation groundwater remediation program under this ROS (Shaw, 2012c). After installation and operation of the SVE system in Building 5, additional soil vapor and indoor air sampling will be conducted to monitor the effectiveness of the SVE system.

## **4.5 Soil Vapor and Indoor Air Evaluations at Offsite Tozer Road Properties**

### **4.5.1 30 Tozer Road**

Groundwater analytical data from OB42-S at 30 Tozer Road indicated concentrations of TCE, PCE, and cis-1,2,-DCE above GW-2 standards. These exceedences of GW-2 standards warranted further assessment. Analytical results of the soil vapor sampling collected inside the 30 Tozer Road building (VP-4 30 Tozer) exceed the MADEP vapor screening criteria for TCE and PCE. On behalf of Varian, Shaw has requested and obtained access to the 30 Tozer Road building to conduct additional assessment. This additional assessment will include concurrent sampling of soil vapor and indoor air at three locations in the building. It is expected that this sampling will be conducted in winter 2012/2013. The soil vapor and indoor air analytical data collected will be evaluated in an effort to confirm that the condition of No Significant Risk documented in the Phase II Report for RTN 3-0485 (IT, 2000) continues to exist for site workers at buildings located at this downgradient property.

### **4.5.2 32 Tozer Road Indoor Air Evaluation**

No new activities were conducted at 32 Tozer Road during this reporting period by Varian. Currently, building renovations are underway by the owners and the majority of the building is unoccupied. According to the property owner (Cell Signal Technology), renovations to the 32 Tozer Road building will include significant changes to the floor plan and installation of a seal on the concrete floor in part to minimize potential vapor intrusion. Varian and Shaw understand that, during building renovations, appropriate measures will be taken by the property owner and their environmental consultant to monitor potential exposure to construction workers. Shaw will coordinate installation of up to four soil vapor monitoring points within the building with the property owner and their contractors during on-going construction activities. It is not expected that building renovations will be completed until April 2013. Once the building renovations are complete, Shaw will complete soil vapor and indoor air sampling within the building. The soil vapor and indoor air analytical data collected will be evaluated in an effort to confirm that the condition of No Significant Risk documented in the Phase II Report for RTN 3-0485 (IT, 2000) and the October 2011 ROS report (Shaw, 2011), continues to exist for site workers at this downgradient property.

### **4.5.3 39 Tozer Road Indoor Air Evaluation**

Groundwater analytical results from OB41-S at 39 Tozer Road indicated concentrations below GW-2 standards for detected VOCs except TCE. An exceedence of GW-2 standards implies the potential for groundwater to impact indoor air in occupied buildings. Consistent with MADEP guidance, Shaw and Varian plan on conducting soil vapor and indoor air sampling within the 39 Tozer Road building to further evaluate the potential for indoor air impacts. Shaw is currently working with the property owner to coordinate collection of soil vapor and indoor air samples within the existing building at 39 Tozer Road. Based on a recent site meeting with the property owner, the building at 39 Tozer is currently occupied by a short-term tenant conducting activities that represent a number of potential background sources of VOCs in indoor air (e.g. fabricating fiberglass products). This tenant is expected to vacate the building in November 2012. As a result, indoor air sampling at 39 Tozer Road will be delayed until January or February 2013 to reduce the potential of background sources of VOCs in indoor air. Soil vapor and indoor air analytical data collected will be evaluated in an effort to confirm that the condition of No

Significant Risk documented in the Phase II Report for RTN 3-0485 (IT, 2000) continues to exist for site workers at this downgradient property.

## **5.0 MEASURES TAKEN TO ADDRESS PROBLEMS AFFECTING THE PERFORMANCE OF THE REMEDIAL ACTION (310 CMR 40.0892 (2)(d))**

No problems affecting the performance of the selected remedial actions were identified during this reporting period. Minor modifications to the original Phase IV Remedial Implementation Plan (IT, 2001) continue to be made as needed based on site conditions and are reported to MADEP in regular status reports. As demonstrated by the analytical data in this ROS report, significant remedial progress continues to be made with lower VOC concentrations measures across the Site. The performance of on-going remedial actions conducted will continue to be documented in future ROS reports.

**Notes:**

Analytical results presented in milligrams per liter (mg/l).

Analytical results are reported by the laboratory in micrograms per liter (ug/l). Results are presented without changing the number of significant figures reported by the laboratory.

1,1,2-Trichloroethane, 1,2-dichloropropane, dichloromethane and dichlorodifluoromethane are compounds which have been detected but are not included on the table.

Sample depths are in feet below grade.

NA - None Established

TCA - Trichloroethane

DCE - Dichloroethene

TCE - Trichloroethene

DCA - Dichloroethane

PCE - Tetrachloroethene

ND - None Detected, detection limit provided in parentheses

 **Bold** - Exceeds GW-2 Standard listed

**Notes:**

Analytical results presented in milligrams per liter (mg/l).

Analytical results are reported by the laboratory in micrograms per liter (ug/l). Results are presented without changing the number of significant figures reported by the laboratory.

Bedrock wells BR-1 through BR-8, CL8-BR and CL9-BR each have a multilevel groundwater monitoring system present within the bedrock portion of the well. Zone 1 refers to the deepest sample interval, Zone 2 refers to the middle sampling zone and Zone 3 refers to the sampling zone closest to the ground surface.

1,1,2-Trichloroethane, 1,2-dichloropropane, dichloromethane and dichlorodifluoromethane are compounds which have been detected but are not included on the table.

Sample depths are in feet below grade. A sample depth of NA indicates that the sample was not collected at a discrete depth.

OB-32-DO(PURGE) = Duplicate sample collected by purge and grab method.

E - Estimated concentration

L - Sample analyzed outside of holding time.

N - Matrix interference

Z - Sample results switched in May 7, 2004 status report.

D - Indicates that the result is reported from a secondary dilute sample.

ND - None Detected, detection limit provided in parentheses J - Estimated concentration

D = Result reported is from a diluted sample

N = Matrix interference

Field parameter results reported are from the closest date to the analytical sampling

Pos = results indicate active Dehalococcoides are present

Neg = results do not indicate active Dehalococcoides are present

(1) = results from RNA analysis

(2) = results from biotrap analysis by Microbial Insights (cells/grams of beads)

(3) = results from biotrap analysis by Shaw (cells/grams of beads)

\* = Sample BW-03 collected on 1/28/2010 but was broken in transit, not analyzed.

J - Estimated concentration

TOTAL VOLATILE ORGANIC COMPOUND (VOC)  
ISOCONCENTRATION CONTOUR IN  
MILLIGRAMS PER LITER (mg/L)  
THIS IS GRAPHICAL REPRESENTATION  
OF TOTAL VOC CONCENTRATIONS

DASHING INDICATES AN INFERRED CONTOUR  
⊕ CL10-S = WELL IDENTIFICATION  
0.14(13') = TOTAL VOC CONCENTRATIONS (mg/L)  
(SAMPLE DEPTH BELOW GRADE IN FT.)  
SAMPLE DATES 04/04/12 THROUGH 04/06/12

PAST AND CURRENT PERMANGANATE  
INJECTION WELLS SHOWN IN PURPLE

NOTE:  
1) CONTOURS WERE DEVELOPED USING TOTAL VOC CONCENTRATION  
COLLECTED AT EACH WELL. VOCs TOTALLED INCLUDED THE FOLLOWING  
SITE-RELATED CHEMICALS: TRICHLOROETHENE, TETRACHLOROETHENE,  
1,1,1-TRICHLOROETHANE, CIS-1,2-DICHLOROETHENE,  
TRANS-1,2-DICHLOROETHENE, 1,1-DICHLOROETHANE,  
1,1-DICHLOROETHENE, 1,2-DICHLOROETHANE AND VINYL CHLORIDE.  
2) USED FOR ESTIMATING VOC CONCENTRATION IN GROUNDWATER ARE  
FROM SAME DATES NOTED ABOVE. WITH THE FOLLOWING EXCEPTIONS:  
DATA FOR "CPT" POINTS WAS COLLECTED DURING SURVEYS CONDUCTED IN  
AUGUST-SEPTEMBER 1996 AND APRIL-MAY 1998. AT WELLS NOT  
SAMPLED APRIL 2011, DATA FROM THE MOST RECENT MONITORING WAS  
USED. RESULTS OF SURFACE WATER SAMPLES WERE NOT CONSIDERED IN  
ESTIMATING VOC DISTRIBUTION.

BEDROCK WELLS BR-1 THROUGH BR-8 AND CL9-BR HAVE MULTILEVEL  
GROUNDWATER MONITORING SYSTEMS PRESENT WITHIN THE BEDROCK.  
ZONE 1 REFERS TO THE DEEPEST SAMPLING ZONE, ZONE 2 REFERS IS  
THE MIDDLE SAMPLING INTERVAL, AND ZONE 3 CLOSEST TO THE GROUND  
SURFACE.

## **APPENDIX A**

### **MADEP COMPREHENSIVE RESPONSE ACTION TRANSMITTAL FORM (BWSC108) AND REMEDIAL MONITORING REPORT (RMR) CHECKLIST**

**Massachusetts Department of Environmental Protection**  
**Bureau of Waste Site Cleanup**

**BWSC108**

Release Tracking Number

3 - 485

**COMPREHENSIVE RESPONSE ACTION TRANSMITTAL  
FORM & PHASE I COMPLETION STATEMENT**

Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

**A. SITE LOCATION:**

1. Site Name: **VARIAN-MICROWAVE DIV**

2. Street Address: **150 SOHIER RD**

3. City/Town: **BEVERLY**

4. ZIP Code: **019150000**

5. Check here if a Tier Classification Submittal has been provided to DEP for this disposal site.

a. Tier IA     b. Tier IB     c. Tier IC     d. Tier II

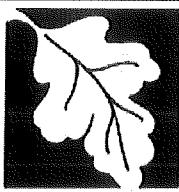

6. If applicable, provide the Permit Number: **P23730**

**B. THIS FORM IS BEING USED** (check all that apply)

- 1. Submit a **Phase I Completion Statement**, pursuant to 310 CMR 40.0484.
- 2. Submit a **Revised Phase I Completion Statement**, pursuant to 310 CMR 40.0484.
- 3. Submit a **Phase II Scope of Work**, pursuant to 310 CMR 40.0834.
- 4. Submit an **interim Phase II Report**. This report does not satisfy the response action deadline requirements in 310 CMR 40.0500.
- 5. Submit a **final Phase II Report and Completion Statement**, pursuant to 310 CMR 40.0836.
- 6. Submit a **Revised Phase II Report and Completion Statement**, pursuant to 310 CMR 40.0836.
- 7. Submit a **Phase III Remedial Action Plan and Completion Statement**, pursuant to 310 CMR 40.0862.
- 8. Submit a **Revised Phase III Remedial Action Plan and Completion Statement**, pursuant to 310 CMR 40.0862.
- 9. Submit a **Phase IV Remedy Implementation Plan**, pursuant to 310 CMR 40.0874.
- 10. Submit a **Modified Phase IV Remedy Implementation Plan**, pursuant to 310 CMR 40.0874.
- 11. Submit an **As-Built Construction Report**, pursuant to 310 CMR 40.0875.
- 12. Submit a **Phase IV Status Report**, pursuant to 310 CMR 40.0877.
- 13. Submit a **Phase IV Completion Statement**, pursuant to 310 CMR 40.0878 and 40.0879.

Specify the outcome of Phase IV activities: (check one)

- a. Phase V Operation, Maintenance or Monitoring of the Comprehensive Remedial Action is necessary to achieve a Response Action Outcome.
- b. The requirements of a Class A Response Action Outcome have been met. No additional Operation, Maintenance or Monitoring is necessary to ensure the integrity of the Response Action Outcome. A completed Response Action Outcome Statement and Report (BWSC104) will be submitted to DEP.
- c. The requirements of a Class C Response Action Outcome have been met. No additional Operation, Maintenance or Monitoring is necessary to ensure the integrity of the Response Action Outcome. A completed Response Action Outcome Statement and Report (BWSC104) has been or will be submitted to DEP.
- d. The requirements of a Class C Response Action Outcome have been met. Further Operation, Maintenance or Monitoring of the remedial action is necessary to ensure that conditions are maintained and that further progress is made toward a Permanent Solution. A completed Response Action Outcome Statement and Report (BWSC104) has been or will be submitted to DEP.

**COMPREHENSIVE RESPONSE ACTION TRANSMITTAL  
FORM & PHASE I COMPLETION STATEMENT**

Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

**B. THIS FORM IS BEING USED TO (cont.):(check all that apply)**

- 14. Submit a **Revised Phase IV Completion Statement**, pursuant to 310 CMR 40.0878 and 40.0879.
- 15. Submit a **Phase V Status Report**, pursuant to 310 CMR 40.0892.
- 16. Submit a **Remedial Monitoring Report**. (This report can only be submitted through eDEP.)
  - a. Type of Report: (check one)  i. Initial Report  ii. Interim Report  iii. Final Report
  - b. Frequency of Submittal: (check all that apply)
    - i. A Remedial Monitoring Report(s) submitted monthly to address an Imminent Hazard.
    - ii. A Remedial Monitoring Report(s) submitted monthly to address a Condition of Substantial Release Migration.
    - iii. A Remedial Monitoring Report(s) submitted concurrent with a Status Report
  - c. Status of Site: (check one)  i. Phase IV  ii. Phase V  iii. Remedy Operation Status  iv. Class C RAO
  - d. Number of Remedial Systems and/or Monitoring Programs:
- A separate BWSC108A, CRA Remedial Monitoring Report, must be filled out for each Remedial System and/or Monitoring Program addressed by this transmittal form.
- 17. Submit a **Remedy Operation Status**, pursuant to 310 CMR 40.0893.
- 18. Submit a **Status Report to maintain a Remedy Operation Status**, pursuant to 310 CMR 40.0893(2).
- 19. Submit a **Transfer and/or a Modification of Persons Maintaining a Remedy Operation Status (ROS)**, pursuant to 310 CMR 40.0893(5) (check one, or both, if applicable).
  - a. Submit a Transfer of Persons Maintaining an ROS (the transferee should be the person listed in Section D, "Person Undertaking Response Actions").
  - b. Submit a Modification of Persons Maintaining an ROS (the primary representative should be the person listed in Section D, "Person Undertaking Response Actions").
  - c. Number of Persons Maintaining an ROS not including the primary representative: \_\_\_\_\_
- 20. Submit a **Termination of a Remedy Operation Status**, pursuant to 310 CMR 40.0893(6). (check one)
  - a. Submit a notice indicating ROS performance standards have not been met. A plan and timetable pursuant to 310 CMR 40.0893(6)(b) for resuming the ROS are attached.
  - b. Submit a notice of Termination of ROS.
- 21. Submit a **Phase V Completion Statement**, pursuant to 310 CMR 40.0894.  
Specify the outcome of Phase V activities: (check one)
  - a. The requirements of a Class A Response Action Outcome have been met. No additional Operation, Maintenance or Monitoring is necessary to ensure the integrity of the Response Action Outcome. A completed Response Action Outcome Statement (BWSC104) will be submitted to DEP.
  - b. The requirements of a Class C Response Action Outcome have been met. No additional Operation, Maintenance or Monitoring is necessary to ensure the integrity of the Response Action Outcome. A completed Response Action Outcome Statement and Report (BWSC104) will be submitted to DEP.
  - c. The requirements of a Class C Response Action Outcome have been met. Further Operation, Maintenance or Monitoring of the remedial action is necessary to ensure that conditions are maintained and/or that further progress is made toward a Permanent Solution. A completed Response Action Outcome Statement and Report (BWSC104) will be submitted to DEP.
- 22. Submit a **Revised Phase V Completion Statement**, pursuant to 310 CMR 40.0894.
- 23. Submit a **Post-Class C Response Action Outcome Status Report**, pursuant to 310 CMR 40.0898.

**COMPREHENSIVE RESPONSE ACTION TRANSMITTAL  
FORM & PHASE I COMPLETION STATEMENT**

Pursuant to 310 CMR 40.0484 (Subpart D) and 40.0800 (Subpart H)

**C. LSP SIGNATURE AND STAMP:**

I attest under the pains and penalties of perjury that I have personally examined and am familiar with this transmittal form, including any and all documents accompanying this submittal. In my professional opinion and judgment based upon application of (i) the standard of care in 309 CMR 4.02(1), (ii) the applicable provisions of 309 CMR 4.02(2) and (3), and 309 CMR 4.03(2), and (iii) the provisions of 309 CMR 4.03(3), to the best of my knowledge, information and belief,

> if Section B indicates that a **Phase I, Phase II, Phase III, Phase IV or Phase V Completion Statement** and/or a **Termination of a Remedy Operation Status** is being submitted, the response action(s) that is (are) the subject of this submittal (i) has (have) been developed and implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> if Section B indicates that a **Phase II Scope of Work** or a **Phase IV Remedy Implementation Plan** is being submitted, the response action(s) that is (are) the subject of this submittal (i) has (have) been developed in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal;

> if Section B indicates that an **As-Built Construction Report**, a **Remedy Operation Status**, a **Phase IV, Phase V or Post-Class C RAO Status Report**, a **Status Report to Maintain a Remedy Operation Status**, a **Transfer or Modification of Persons Maintaining a Remedy Operation Status** and/or a **Remedial Monitoring Report** is being submitted, the response action(s) that is (are) the subject of this submittal (i) is (are) being implemented in accordance with the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, (ii) is (are) appropriate and reasonable to accomplish the purposes of such response action(s) as set forth in the applicable provisions of M.G.L. c. 21E and 310 CMR 40.0000, and (iii) comply(ies) with the identified provisions of all orders, permits, and approvals identified in this submittal.

I am aware that significant penalties may result, including, but not limited to, possible fines and imprisonment, if I submit information which I know to be false, inaccurate or materially incomplete.

## CRA REMEDIAL MONITORING REPORT

Pursuant to 310 CMR 40.0800 (SUBPART H)

**Release Tracking Number**

3 - 485

Remedial System or Monitoring Program: **1** of **1**

**A. DESCRIPTION OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM:**

1. Type of Active Remedial System or Active Remedial Monitoring Program: (check all that apply)

a. Active Remedial System: (check all that apply)

i. NAPL Recovery       ii. Soil Vapor Extraction/Bioventing       iii. Vapor-phase Carbon Adsorption  
 iv. Groundwater Recovery       v. Dual/Multi-phase Extraction       vi. Aqueous-phase Carbon Adsorption  
 vii. Air Stripping       viii. Sparging/Biosparging       ix. Cat/Thermal Oxidation

x. Other      Describe: \_\_\_\_\_

b. Application of Remedial Additives: (check all that apply)

i. To the Subsurface       ii. To Groundwater (Injection)       iii. To the Surface

c. Active Remedial Monitoring Program Without the Application of Remedial Additives: (check all that apply; Sections C, D and E are not required; attach supporting information, data, maps and/or sketches needed by checking Section F5)

i. Reactive Wall       ii. Natural Attenuation       iii. Other      Describe: \_\_\_\_\_

2. Mode of Operation: (check one)

a. Continuous       b. Intermittent       c. Pulsed       d. One-time Event Only       e. Other: \_\_\_\_\_

3. System Effluent/Discharge: (check all that apply)

a. Sanitary Sewer/POTW  
 b. Groundwater Re-infiltration/Re-injection: (check one)       i. Downgradient       ii. Upgradient  
 c. Vapor-phase Discharge to Ambient Air: (check one)       i. Off-gas Controls       ii. No Off-gas Controls  
 d. Drinking Water Supply  
 e. Surface Water (including Storm Drains)

f. Other      Describe: **NOT APPLICABLE**

**B. MONITORING FREQUENCY:**

1. Reporting period that is the subject of this submittal: From: **4/1/2012** To: **9/30/2012**  
(mm/dd/yyyy) (mm/dd/yyyy)

2. Number of monitoring events during the reporting period: (check one)

- a. System Startup: (if applicable)
    - i. Days 1, 3, 6, and then weekly thereafter, for the first month.

- ii. Other Describe: \_\_\_\_\_

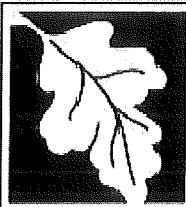

- b. Post-system Startup (after first month) or Monitoring Program:

  - i. Monthly
  - ii. Quarterly
  - iii. Other. Describe: **BI-WEEKLY**

3. Check here to certify that the number of required monitoring events were conducted during the reporting period.

**C. EFFLUENT/DISCHARGE REGULATION:** (check one to indicate how the effluent/discharge limits were established)

**D. WASTEWATER TREATMENT PLANT OPERATOR:** (check one)

1. Required due to Remedial Wastewater Treatment Plant in place for more than 30 days.

a. Name: \_\_\_\_\_ b. Grade: \_\_\_\_\_

c. License No.: \_\_\_\_\_ d. License Exp. Date: \_\_\_\_\_  
(mm/dd/yyyy)

2. Not Required

3. Not Applicable

**E. STATUS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM DURING REPORTING PERIOD:**

(check all that apply)

1. The Active Remedial System was functional one or more days during the Reporting Period.

a. Days System was Fully Functional: \_\_\_\_\_ b. GW Recovered (gals): \_\_\_\_\_

c. NAPL Recovered (gals): \_\_\_\_\_ d. GW Discharged (gals): \_\_\_\_\_

e. Avg. Soil Gas Recovery Rate (scfm): \_\_\_\_\_ f. Avg. Sparging Rate (scfm): \_\_\_\_\_

2. Remedial Additives: (check all that apply)

- a. No Remedial Additives applied during the Reporting Period.

- b. Enhanced Bioremediation Additives applied: (total quantity applied at the site for the current reporting period)

- i. Nitrogen/Phosphorus:

Name of Additive	Date	Quantity	Units

- ii. Peroxides:

Name of Additive	Date	Quantity	Units

- iii. Microorganisms:

Name of Additive	Date	Quantity	Units

- iv. Other:

Name of Additive	Date	Quantity	Units
EMULSIFIED VEGETA	7/10/2012	3095	GALS

- c. Chemical oxidation/reduction additives applied: (total quantity applied at the site for the current reporting period)

- i. Permanganates:

Name of Additive	Date	Quantity	Units
SODIUM PERMANGANAT	7/26/2012	1806.75	GALS

- ii. Peroxides:

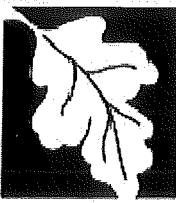

Name of Additive	Date	Quantity	Units

- iii. Persulfates:

Name of Additive	Date	Quantity	Units

- iv. Other:

Name of Additive	Date	Quantity	Units

- e. Check here if any additional Remedial Additives were applied. Attach list of additional additives and include Name of Additive, Date Applied, Quantity Applied and Units (in gals. or lbs.)

**F. SHUTDOWNS OF ACTIVE REMEDIAL SYSTEM OR ACTIVE REMEDIAL MONITORING PROGRAM: (check all that apply)**

1. The Active Remedial System had unscheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Unscheduled Shutdowns: \_\_\_\_\_ b. Total Number of Days of Unscheduled Shutdowns: \_\_\_\_\_

c. Reason(s) for Unscheduled Shutdowns: \_\_\_\_\_

2. The Active Remedial System had scheduled shutdowns on one or more occasions during the Reporting Period.

a. Number of Scheduled Shutdowns: \_\_\_\_\_ b. Total Number of Days of Scheduled Shutdowns: \_\_\_\_\_

c. Reason(s) for Scheduled Shutdowns: \_\_\_\_\_

3. The Active Remedial System or Active Remedial Monitoring Program was permanently shutdown/discontinued during the Reporting Period.

a. Date of Final System or Monitoring Program Shutdown: \_\_\_\_\_  
(mm/dd/yyyy)

b. No Further Effluent Discharges.

c. No Further Application of Remedial Additives planned; sufficient monitoring completed to demonstrate compliance with 310 CMR 40.0046.

d. No Further Submittals Planned.

e. Other: Describe: \_\_\_\_\_

**G. SUMMARY STATEMENTS: (check all that apply for the current reporting period)**

1. All Active Remedial System checks and effluent analyses required by the approved plan and/or permit were performed when applicable.

2. There were no significant problems or prolonged (>25% of reporting period) unscheduled shutdowns of the Active Remedial System.

3. The Active Remedial System or Active Remedial Monitoring Program operated in conformance with the MCP, and all applicable approval conditions and/or permits.

4. Indicate any Operational Problems or Notes:

\_\_\_\_\_

5. Check here if additional/supporting Information, data, maps, and/or sketches are attached to the form.

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly Air Samples/139340/143267**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on October 10, 2011. For your reference, these analyses have been assigned our service request number **R1105621**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

Respectfully submitted,

**Columbia Analytical Services, Inc.**

Michael Perry  
Laboratory Manager

**COLUMBIA ANALYTICAL SERVICES, INC.**

**Client:** Shaw E & I, Inc.  
**Project:** Varian Beverly  
**Sample Matrix:** Air

**Service Request No.:** R1105621  
**Project No.:** 143267/139340  
**Date Received:** 10/10/11

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. This report contains analytical results for samples designated for Tier II, MASS. CAM deliverables. When appropriate to the method, blank and LCS results have been reported with each analytical test.

**Sample Receipt**

Shaw air samples were collected on 10/06/11 and 10/07/11 and received at CAS in good condition as noted on the receipt and preservation check form. The samples were stored in the laboratory at room temperature prior to analysis. See the CAS case narrative for a cross-reference between Client ID and CAS Job #.

**TO - 15 Air Analysis**

Eighteen air samples were analyzed for a site specific list of Volatile Organics by EPA method TO-15.

All samples were analyzed at appropriate dilutions based on prescreening of the samples and/or historical data to bring the target analytes within the calibration range of the method.

All initial and continuing calibrations were compliant.

All surrogate standard recoveries were within QC limits.

The LCS/LCSD recoveries were all within QC limits of 70 – 130 %. All RPD data were within QC limits.

No analytical or QC problems were encountered with these analyses.

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	X Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	X Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	X Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	X Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	X Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	X Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	X Yes <input type="checkbox"/> No <sup>1</sup>
---	---	--

Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40.1056 (2)(k) and WSC-07-350.

H	Were all QC performance standards specified in the CAM protocol(s) achieved?	X Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	X Yes <input type="checkbox"/> No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

## Data Usability Worksheet

**Project Name :** Varian Medical Systems, Inc      **Job Number :** 143276  
**Prepared By:** Jennifer Gailey      **Date :** 6/7/2012  
**Analyte Group :** Volatile Organics  
Metabolic Acid  
Methane, Ethane, Ethene      **Analytical Method :** 8260C  
HPLC  
RSK 175  
  
**Completed MADEP CAM Certification Form included:** Yes      **Laboratory ID No. :** R1202156  
  
**Chain of Custody included in Data Package ?** Yes      **Is it Complete ?** Yes

Sample Collection Date	Analysis	Allowable Holding Time for extraction	Allowable Holding Time for analysis	Analysis Date
4/03, 4/04/2012	VOC 8260B		14 days	4/9, 4/10, 4/11/2012
4/03, 4/04/2013	Metabolic Acid HPLC		14 days	4/6, 4/7, 4/9, 4/10, 4/11/2012
4/03, 4/04/2014	RSK 175		14 days	4/6, 4/7, 4/9, 4/10, 4/11/2012

**Sample temperature within QC limits:** Yes

### Surrogate Recovery

Are all % recoveries within the allowable range ? Yes

If No, List sample ID where range was exceeded: NA

### MS/MSD

Are all MS/MSD sample recoveries within the QC limits ? Yes

If No, list sample ID, date and compound where limit was exceeded: NA

### Laboratory Control Samples

Are all laboratory control sample recoveries within the QC limits ? No

If no, list sample ID where range was exceeded: For method 8260C the blank spike for LCSD recoveries were outside control limits for trans-1,3-dichloropropene on the LCSD from 4/10/2012.

For metabolic acid analysis the blank spike for LCS recovery for Butyric Acid was outside QC limits.

**Equipment Field Blank ID :** EB-3 4/10/2012  
**Trip Blank ID :** Trip Blank 3 4/10/2012

<b>Method Blank:</b>	VOC 8260B	4/9, 4/10, 4/11/2012
	Metabolic Acid HPLC	4/6, 4/10/2012
	RSK 175	4/6, 4/11/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:**

#### Notes:

VOCs - Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. Samples AP25-DO, BW-8, and SW-9 were reanalyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

For Modified RSK-175 - Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. Samples AP-23-DO, AP-24-DO, BW-4, BW-8, BW-9, OB9-BR, OB9-S and unnamed stream were reanalyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

Service Request No: R1202156

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/143276-02000000**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on April 5, 2012. For your reference, these analyses have been assigned our service request number **R1202156**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

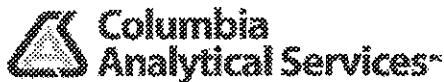

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

A handwritten signature in black ink, appearing to read "Michael K. Perry". It is written in a cursive style with a large, sweeping flourish underneath the main name.

## COLUMBIA ANALYTICAL SERVICES, INC.

**Client:** Shaw Environmental, Inc  
**Project:** Varian Beverly  
**Sample Matrix:** Water

**Service Request No.:** R1202156  
**Project Number:** 143276-02000000  
**Date Received:** 4/05/12

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

#### Sample Receipt

Water samples were collected on 4/03/12 and 4/04/12 and received at CAS in good condition at a cooler temperature of 8.9 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

#### Volatile Organics

Twenty-four water samples were analyzed for a site list of Volatile Organics by SW-846 Method 8260C.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples AP25-DO, BW-8, and BW-9 were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial and continuing calibrations were compliant.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits except trans-1,3-dichloropropene on the LCSD from 4/10/12. This recovery was flagged with an \*\*.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

#### Metabolic Acid Analysis

Fifteen water samples were analyzed for Metabolic Acids by HPLC using a modified in house method. Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method.

All the initial and continuing calibration criteria were met for all analytes except as noted below.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits except Butyric Acid on the LCS from 4/10/12. This recovery was flagged with an \*\*.

The Method Blanks associated with these samples are free of contamination.

No other analytical or QC problems were encountered.

**Modified RSK-175**

Fifteen water samples were analyzed for the hydrocarbon gases Methane, Ethane, and Ethene by modified RSK-175.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples AP23-DO, AP24-DO, BW-4, BW-5, BW-8, BW-9, OB9-BR, OB9-S, and Unnamed Stream were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All the initial and continuing calibration criteria were met for all analytes.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

The Method Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

## CASE NARRATIVE

This report contains analytical results for the following samples:

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
<b><u>Data User Note:</u> Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40.1056 (2)(K) and WSC-07-350.</b>		
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)? <i>Site List</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclores).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

Service Request No: R1202157

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/143267-05000000**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on April 5, 2012. For your reference, these analyses have been assigned our service request number **R1202157**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

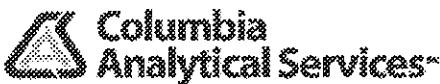

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

PACIFIC SOUTHERN PACIFIC WESTERN

00001

**COLUMBIA ANALYTICAL SERVICES, INC.**

**Client:** Shaw Environmental, Inc  
**Project:** Varian Beverly  
**Sample Matrix:** Water

**Service Request No.:** R1202157  
**Project Number:** 143267-05000000  
**Date Received:** 4/05/12

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

**Sample Receipt**

Water samples were collected on 4/02/12 - 4/04/12 and received at CAS in good condition at a cooler temperature of 7.3 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

**Volatile Organics**

Fifty-three water samples were analyzed for a site list or the MASS CAM list of Volatile Organics by SW-846 Method 8260C.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples BR-5\_Zone 3, CL9-BR\_Zone 1, CL9-BR\_Zone 3BW-9, BR-6\_Zone 2, and BR-S\_Zone 1 were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial and continuing calibrations were compliant.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
<i>Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40.1056 (2)(K) and WSC-07-350.</i>		
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

## Cooler Receipt and Preservation Check Form

Project/Client Shaw - Vorian Ben. Folder Number R1202157Cooler received on 4/5/12 by: Alt COURIER: ALS  FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO  
 2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO  
 3. Did all bottles arrive in good condition (unbroken)?  YES  NO  
 4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles?  YES NO N/A  
 5. Were Ice or Ice packs present?  YES NO  
 6. Where did the bottles originate?  ALS/ROC, CLIENT  
 7. Temperature of cooler(s) upon receipt: 7.3°

Is the temperature within 0° - 6° C?: Yes Yes Yes Yes Yes

If No, Explain Below  No No No NoDate/Time Temperatures Taken: 4/5/12 0933Thermometer ID: IR GUN#3 / IR GUN#4 Reading From:  Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition &amp; Client Approval to Run Samples:

All Samples held in storage location 3-002 by Alt on 4/5/12 at 0934  
5035 samples placed in storage location by on atPC Secondary Review: MM 4/6/12

- Cooler Breakdown: Date: 4/5/12 Time: 1348 by: Alt  
 1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES NO  
 2. Did all bottle labels and tags agree with custody papers?  YES NO  
 3. Were correct containers used for the tests indicated?  YES NO  
 4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated  N/A

Explain any discrepancies: \_\_\_\_\_

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO <sub>3</sub>								
≤2	H <sub>2</sub> SO <sub>4</sub>								
<4	NaHSO <sub>4</sub>								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)

	Zn Aceta	-	-						
	HCl	*	*	411060	3/13				

\*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: \_\_\_\_\_

Bottle lot numbers: i-315-002

Other Comments:

TB-1 & TB-2 - 1 vial w/ bubble1 vial for BR-7 zone 2\* Not enough ice - samples double stacked in cooler. Samp b bottle temps checked & none lower than temp blank.PC Secondary Review: MM 4/6/12

\*significant air bubbles: VOA &gt; 5-6 mm : WC &gt; 1 in. diameter

## Data Usability Worksheet

<b>Project Name :</b>	Varian Medical Systems, Inc	<b>Job Number :</b>	143267
<b>Prepared By:</b>	Jennifer Gailey	<b>Date :</b>	6/15/2012
<b>Analyte Group :</b>	Volatile Organics Chloride Metals (Fe & Mn)	<b>Analytical Method :</b>	EPA Method 8260C EPA Method SM 4500-CL-E EPA Method 6010B

<b>Completed MADEP CAM Certification Form included:</b>	Yes	<b>Laboratory ID No. :</b>	R1202187
<b>Chain of Custody included in Data Package ? Yes</b>		<b>Is it Complete ? No</b>	Bottles for Chloride and Metals received for AP-19 AP-20(15'), and AP-21(22.2') but they were not listed on COC.

Sample Collection Date	Analysis	Allowable Holding Time for extraction	Allowable Holding Time for analysis	Analysis Date
4/5/2012	VOC 8260C		14 days	4/13, 4/14, 4/16, 4/17, 4/18/2012
4/5/2012	Chloride EPA Method SM 4500-CL-E		28 days	4/16/2012
4/5/2012	Dissolved iron and manganese 6010B		6 months	4/12, 4/13/2012

**Sample temperature within QC limits:** Yes, temperature 2.8 degrees

### Surrogate Recovery

Are all % recoveries within the allowable range ? Yes

If No, List sample ID where range was exceeded: NA

### MS/MSD

Are all MS/MSD sample recoveries within the QC limits ? Yes

If No, list sample ID, date and compound where limit was exceeded: NA

### Laboratory Control Samples

Are all laboratory control sample recoveries within the QC limits ? Yes

If no, list sample ID where range was exceeded: NA

<b>Equipment Field Blank ID :</b>	EB-3 4/13/2012
<b>Trip Blank ID :</b>	TB-4 4/13/2012
	4/12, 4/13, 4/16, 4/17, and 4/18/2012
<b>Method Blank:</b>	VOC 8260C Chloride EPA Method SM 4500-CL-E 4/18/2012
	Dissolved iron and manganese 6010B 4/11 and 4/12/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:** NA

### Notes:

VOCs - Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. Samples GZ-1 (12.3), W-1(11), AP-20(15), MW-14A (59), and OB25-BR(90) were reanalyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

April 19, 2012

Service Request No: R1202187

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/143267-05000000**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on April 6, 2012. For your reference, these analyses have been assigned our service request number **R1202187**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at MPerry@caslab.com.

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

## COLUMBIA ANALYTICAL SERVICES, INC.

**Client:** Shaw Environmental, Inc  
**Project:** Varian Beverly  
**Sample Matrix:** Water

**Service Request No.:** R1202187  
**Project Number:** 143267-05000000  
**Date Received:** 4/06/12

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

#### Sample Receipt

Water samples were collected on 4/05/12 and received at CAS in good condition at a cooler temperature of 2.8 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

#### Volatile Organics

Thirty-seven water samples were analyzed for a site list or the MASS CAM list of Volatile Organics by SW-846 Method 8260C.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples GZ-1 (12.3'), W-1 (11'), AP-20 (15'), MW-14A (59'), and OB25-BR (90') were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial and continuing calibrations were compliant.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

#### Inorganic Analyses

Seven water samples were analyzed for dissolved Iron and dissolved Manganese by SW-846 method 6010B and for Chloride by method SM 4500-CL-E.

The initial and continuing calibration criteria were met for all analytes.

All Blank Spike (LCS) recoveries were within QC limits.

No analytical or QC problems were encountered.

# MassDEP Analytical Protocol Certification Form

Laboratory Name: Columbia Analytical Services, Inc.

Project #: 143267-05000000

Project Location: Varian Beverly

RTN:

**This Form provides certifications for the following data set: list Laboratory Sample ID Number(s): R1202187 – 001 - 038**

Matrices: X Groundwater  Soil/Sediment  Drinking Water  Air  Other: \_\_\_\_\_

**CAM Protocol** (check all that apply below):

8260 VOC CAM II A <input checked="" type="checkbox"/>	7470/7471 Hg CAM III B <input type="checkbox"/>	MassDEP VPH CAM IV A <input type="checkbox"/>	8081 Pesticides CAM V B <input type="checkbox"/>	7196 Hex Cr CAM VI B <input type="checkbox"/>	MassDEP APH CAM IX A <input type="checkbox"/>

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<i>Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40. 1056 (2)(k) and WSC-07-350.</i>		
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
**M-NY032**

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

## Cooler Receipt and Preservation Check Form

Project/Client Show Folder Number R12-2187

Cooler received on 4/6/12 by: Alt COURIER: ALS UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES  NO
2. Were custody papers properly filled out (ink, signed, etc.)?  YES  NO
3. Did all bottles arrive in good condition (unbroken)?  YES  NO
4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles? YES  NO  N/A
5. Were Ice or Ice packs present?  YES  NO
6. Where did the bottles originate?  ALS/ROG, CLIENT
7. Temperature of cooler(s) upon receipt: 2.8°

Is the temperature within 0° - 6° C?:  Yes  Yes  Yes  Yes  Yes

If No, Explain Below  No  No  No  No  No

Date/Time Temperatures Taken: 4/6/12 0900

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location	<u>R-002</u>	by <u>Alt</u>	on <u>4/6/12</u>	at <u>0901</u>
5035 samples placed in storage location		by _____	on _____	at _____

PC Secondary Review: MP 4/6/12

- Cooler Breakdown: Date: 4/6/12 Time: 1138 by: Alt
1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES  NO
  2. Did all bottle labels and tags agree with custody papers?  YES  NO
  3. Were correct containers used for the tests indicated?  YES  NO

## Data Usability Worksheet

<b>Project Name :</b>	Varian Medical Systems, Inc	<b>Job Number :</b>	143267
<b>Prepared By:</b>	Sheila Barry	<b>Date :</b>	5/15/2012
<b>Analyte Group :</b>	Volatile Organics  Chloride Metals (Fe & Mn)	<b>Analytical Method :</b>	EPA Method 8260C EPA Method SM 4500-CL-E EPA Method 6010B

**Completed MADEP CAM Certification Form included:** Yes

**Laboratory ID No. :** 1202267

**Chain of Custody included in Data Package ?** Yes **Is it Complete ?** Yes

Sample Collection Date	Analysis	Allowable Holding Time for extraction	Allowable Holding Time for analysis	Analysis Date
4/6/2012	VOC 8260C		14 days	4/13, 4/17, 4/18, and 4/19/2012
4/6/2012	Chloride EPA Method SM 4500-CL-E		28 days	4/18/2012
4/6/2012	Dissolved iron and manganese 6010B		6 months	4/19, 4/20, and 4/23/2012

**Sample temperature within QC limits:** No, temperature 8.2 degrees (outside 0-6 degree range). However, samples were stored at appropriate temperature upon receipt at laboratory.

### Surrogate Recovery

Are all % recoveries within the allowable range ? Yes

If No, List sample ID where range was exceeded: NA

### MS/MSD

Are all MS/MSD sample recoveries within the QC limits ? NA

If No, list sample ID, date and compound where limit was exceeded: NA

### Laboratory Control Samples

Are all laboratory control sample recoveries within the QC limits ? Yes

If no, list sample ID where range was exceeded: NA

<b>Equipment Field Blank ID :</b>	4/18/2012
<b>Trip Blank ID :</b>	4/18/2012
	4/13, 4/17, 4/18, and 4/19/2012
<b>Method Blank:</b>	VOC 8260C
	4/19/2012
	Chloride EPA Method SM 4500-CL-E
	4/18/2012
	Dissolved iron and manganese 6010B
	4/18 and 4/19/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:** NA

### Notes:

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. Samples OB27-BR, OB36-DO, B-2, CL3-DO, and APBIO-01 were reanalyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D". The continuing calibration criteria were met for all analytes except for the following: 1,2-Dichloroethane, Carbon Tetrachloride, and cis-1,3-Dichloropropene. Data associated with these compounds under the continuing calibration criteria should be considered as estimated. However, since no positive detections were seen, no data was affected.

Service Request No: R1202267

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/143267-05000000**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on April 11, 2012. For your reference, these analyses have been assigned our service request number **R1202267**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at [MPerry@caslab.com](mailto:MPerry@caslab.com).

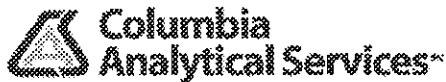

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

## COLUMBIA ANALYTICAL SERVICES, INC.

Client: Shaw Environmental, Inc  
Project: Varian Beverly  
Sample Matrix: Water

Service Request No.: R1202267  
Project Number: 143267-05000000  
Date Received: 4/11/12

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

#### Sample Receipt

Water samples were collected on 4/06/12 and received at CAS in good condition at a cooler temperature of 8.2 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

#### Volatile Organics

Thirty-three water samples were analyzed for a site list or the MASS CAM list of Volatile Organics by SW-846 Method 8260C.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples OB27-BR, OB36-DO, B-2, CL3-DO, and APB10-01 were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial calibrations were compliant.

All the continuing calibration criteria were met for all analytes except the following:

- The CCV from 4/17/12 – for 1,2-Dichloroethane.
- The CCV from 4/17/12 (night run) – 1,2-Dichloroethane, Carbon Tetrachloride, and cis-1,3-Dichloropropene.
- The CCV from 4/18/12 - 1,2-Dichloroethane

These CCVs were greater than 20 % but less than 40 %. Data for samples associated with these compounds under this CCV should be considered as estimated. However, since no positive detections were seen, no data was affected.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

**Inorganic Analyses**

Five water samples were analyzed for dissolved Iron and dissolved Manganese by SW-846 method 6010B and for Chloride by method SM 4500-CL-E.

The initial and continuing calibration criteria were met for all analytes.

All Blank Spike (LCS) recoveries were within QC limits.

No analytical or QC problems were encountered.

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**

## Cooler Receipt and Preservation Check Form

Project/Client Shaw Folder Number B12-2267

Cooler received on 4/11/12 by: Akt COURIER: ALS  UPS  FEDEX  VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO
2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO
3. Did all bottles arrive in good condition (unbroken)?  YES NO
4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles?  YES \* NO N/A
5. Were Ice or Ice packs present? + not enough for # samples + ice insulated from samples by bubble wrap  YES NO
6. Where did the bottles originate? ALS/ROC, CLIENT
7. Temperature of cooler(s) upon receipt: 8.2°

Is the temperature within 0° - 6° C?: Yes Yes Yes Yes Yes

If No, Explain Below  No No No No

Date/Time Temperatures Taken: 4/11/12 0911

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From:  Temp Blank  Sample Bottle

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location	<u>R-002</u>	by <u>Akt</u>	on <u>4/11/12</u>	at <u>0917</u>
5035 samples placed in storage location		by _____	on _____	at _____

PC Secondary Review: mp4/24/12

Cooler Breakdown: Date: 4/11/12 Time: 1249 by: Akt

1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES NO
2. Did all bottle labels and tags agree with custody papers?  YES NO
3. Were correct containers used for the tests indicated?  YES NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized  Tedlar® Bags Inflated  N/A

Explain any discrepancies: \_\_\_\_\_

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO <sub>3</sub>	X		<u>BDB0319F</u>	<u>3/13</u>	<u>AP-12-BR</u>	<u>1ml</u>	<u>BDBZ619F</u>	<u>L2</u>
≤2	H <sub>2</sub> SO <sub>4</sub>								
<4	NaHSO <sub>4</sub>								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)

<b>Prepared By:</b>	Dale Dailey	<b>Date :</b>	6/13/2012
<b>Analyte Group :</b>	Volatile Organics Volatile Organics  Chloride Metals (Fe & Mn)	<b>Analytical Method :</b>	EPA Method 8260C EPA Method 624 EPA Method SM 4500-CL-E EPA Method 6010C

**Completed MADEP CAM Certification Form included:** Yes

**Laboratory ID No. :** R1202418

**Chain of Custody included in Data Package ?** Yes **Is it Complete ?** Yes

Sample Collection Date	Analysis	Allowable Holding Time for extraction	Allowable Holding Time for analysis	Analysis Date
4/17/2012	VOC 8260C		14 days	4/19, 4/23/2012
4/17/2012	VOC 624		14 days	4/19/12
4/17/2012	Chloride EPA Method SM 4500-CL-E		28 days	4/26/2012
4/17/2012	Dissolved iron and manganese 6010C		6 months	4/23, 4/26/2012

**Sample temperature within QC limits:** Yes

### **Surrogate Recovery**

Are all % recoveries within the allowable range ? Yes

If No, List sample ID where range was exceeded: NA

### **MS/MSD**

Are all MS/MSD sample recoveries within the QC limits ? NA

If No, list sample ID, date and compound where limit was exceeded: NA

### **Laboratory Control Samples**

Are all laboratory control sample recoveries within the QC limits ? Yes

If no, list sample ID where range was exceeded: NA

**Equipment Field Blank ID : N/A** N/A  
**Trip Blank ID : Trip Blank (R1202418-006)** 4/18/2012

<b>Method Blank:</b>	VOC 8260C	4/19, 4/23/2012
	VOC 624	4/19/2012
	Chloride EPA Method SM 4500-CL-E	4/26/2012
	Dissolved iron and manganese 6010C	4/23/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:** NA

### **Notes:**

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. Samples AP31-DO (88), AP32-DO (88), and OB26-BR (95), were reanalyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

Service Request No: R1202418

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/143267-05000000**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on April 18, 2012. For your reference, these analyses have been assigned our service request number **R1202418**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at [MPerry@caslab.com](mailto:MPerry@caslab.com).

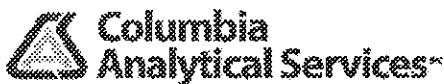

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

#### Sample Receipt

Water samples were collected on 4/17/12 and received at CAS in good condition at a cooler temperature of 5.1 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

#### Volatile Organics

Five water samples were analyzed for a site list of Volatile Organics by SW-846 Method 8260C and one water sample was analyzed for the PPL list of Volatile Organics by EPA method 624.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples AP31-DO (88), AP32-DO (88), and OB26-BR (95) were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial calibrations were compliant.

All the continuing calibration criteria were met for all analytes.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

**Inorganic Analyses**

Three water samples were analyzed for dissolved Iron and dissolved Manganese by SW-846 method 6010B and for Chloride by method SM 4500-CL-E.

The initial and continuing calibration criteria were met for all analytes.

All Blank Spike (LCS) recoveries were within QC limits.

No analytical or QC problems were encountered.

# MassDEP Analytical Protocol Certification Form

Laboratory Name: Columbia Analytical Services, Inc.

Project #: 143267-05000000

Project Location: Varian Beverly

RTN:

**This Form provides certifications for the following data set: list Laboratory Sample ID Number(s):**  
R1202418 - 001 - 006

Matrices:  Groundwater  Soil/Sediment  Drinking Water  Air  Other: \_\_\_\_\_

**CAM Protocol** (check all that apply below):

8260 VOC CAM II A <input checked="" type="checkbox"/>	7470/7471 Hg CAM III B <input type="checkbox"/>	MassDEP VPH CAM IV A <input type="checkbox"/>	8081 Pesticides CAM V B <input type="checkbox"/>	7196 Hex-Cr CAM VI B <input type="checkbox"/>	MassDEP APH CAM IX A <input type="checkbox"/>
8270 SVOC CAM II B <input type="checkbox"/>	7010 Metals CAM III C <input type="checkbox"/>	MassDEP EPH CAM IV B <input type="checkbox"/>	8151 Herbicides CAM V C <input type="checkbox"/>	8330 Explosives CAM VIII A <input type="checkbox"/>	TO-15 VOC CAM IX B <input type="checkbox"/>
6010 Metals CAM III A <input checked="" type="checkbox"/>	6020 Metals CAM III D <input type="checkbox"/>	8082 PCB CAM V A <input type="checkbox"/>	9014 Total Cyanide/PAC CAM VI A <input type="checkbox"/>	6850 Perchlorate CAM VIII B <input type="checkbox"/>	Other: CL by SM4500

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
<i>Data User Note: Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40.1056 (2)(k) and WSC-07-350.</i>		
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## CASE NARRATIVE

This report contains analytical results for the following samples:  
Service Request Number: R1202418

<u>Lab ID</u>	<u>Client ID</u>
R1202418-001	AP30R-DO (88)
R1202418-002	AP31-DO (88)
R1202418-003	AP32-DO (88)
R1202418-004	OB26-BR (95)
R1202418-005	Boiler Room Sump
R1202418-006	Trip Blank

Now part of the ALS Group

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

trans-1,3-Dichloropropene	21.6	20.0	108	20.7	20.0	104	70 - 130	4	20	

Results flagged with an asterisk (\*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

## Cooler Receipt and Preservation Check Form

Project/Client Shaw Folder Number R12-2418

Cooler received on 4/18/12 by: SH COURIER: ALS UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO
2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO
3. Did all bottles arrive in good condition (unbroken)?  YES NO
4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles?  YES NO N/A 1 T3 vial
5. Were Ice or Ice packs present?  YES NO
6. Where did the bottles originate?  ALS/ROC CLIENT
7. Temperature of cooler(s) upon receipt: 5.1°

Is the temperature within 0° - 6° C?:  Yes Yes Yes Yes Yes

If No, Explain Below No No No No No

Date/Time Temperatures Taken: 4/18/12 0905

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location R-002 by SH on 4/18/12 at 0905

## Data Usability Worksheet

**Project Name :** Varian Medical Systems, Inc      **Job Number :** 139340  
**Prepared By:** Jennifer Gailey      **Date :** 6/7/2012  
**Analyte Group :** Volatile Organics      **Analytical Method :** TO-15

**Completed MADEP CAM Certification Form included:** Yes      **Laboratory ID No. :** R1203160

**Chain of Custody included in Data Package ?** Yes      **Is it Complete ?** Yes

Sample Collection Date	Analysis	Allowable Holding Time for extraction	Allowable Holding Time for analysis	Analysis Date
5/16/2012	TO-15		30 days	5/23/2012

**Sample temperature above QC limit:** NA

### Surrogate Recovery

Are all % recoveries within the allowable range ? Yes

If No, List sample ID where range was exceeded: NA

### MS/MSD

Are all MS/MSD sample recoveries within the QC limits ? NA

If No, list sample ID, date and compound where limit was exceeded: NA

### Laboratory Control Samples

Are all laboratory control sample recoveries within the QC limits ? Yes

If no, list sample ID where range was exceeded: NA

<b>Equipment Field Blank ID :</b>	NA
<b>Trip Blank ID :</b>	NA
<b>Method Blank:</b>	TO-15
	5/23/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:** NA

### Notes:

All samples were analyzed at appropriate dilutions based on prescreening of the samples and/or historical data to bring the target analytes within the calibration range of the method.

Service Request No: R1203160

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly Air Samples/139340**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on May 17, 2012. For your reference, these analyses have been assigned our service request number **R1203160**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at [MPerry@caslab.com](mailto:MPerry@caslab.com).

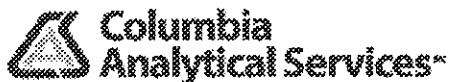

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

**COLUMBIA ANALYTICAL SERVICES, INC.**

**Client:** Shaw E & I, Inc.  
**Project:** Varian Beverly  
**Sample Matrix:** Air

**Service Request No.:** R1203160  
**Project No.:** 139340  
**Date Received:** 5/17/12

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. This report contains analytical results for samples designated for Tier II, MASS. CAM deliverables. When appropriate to the method, blank and LCS results have been reported with each analytical test.

**Sample Receipt**

Shaw air samples were collected on 5/16/12 and received at CAS in good condition as noted on the receipt and preservation check form. The samples were stored in the laboratory at room temperature prior to analysis. See the CAS case narrative for a cross-reference between Client ID and CAS Job #.

**TO - 15 Air Analysis**

One air sample was analyzed for a site list of Volatile Organics by EPA method TO-15.

All samples were analyzed at appropriate dilutions based on prescreening of the samples and/or historical data to bring the target analytes within the calibration range of the method.

All initial and continuing calibrations were compliant.

All surrogate standard recoveries were within QC limits.

The LCS recoveries were all within QC limits of 70 – 130 %. All RPD data were within QC limits.

No analytical or QC problems were encountered with these analyses.

## CASE NARRATIVE

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

## Cooler Receipt and Preservation Check Form

Project/Client ShanFolder Number R12-3077Cooler received on 5/7/12 by: RD COURIER: ALS  UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO
  2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO
  3. Did all bottles arrive in good condition (unbroken)?  YES NO
  4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles? YES NO  N/A
  5. Were Ice or Ice packs present?  YES NO
  6. Where did the bottles originate? ALS/ROO, CLIENT
  7. Temperature of cooler(s) upon receipt: AIR
- Is the temperature within 0° - 6° C?: Yes Yes Yes Yes Yes
- If No, Explain Below: No No No No No

Date/Time Temperatures Taken: AIR

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location	<u>Suo</u>	by <u>RD</u>	on <u>5/7/12</u>	at <u>1015</u>
5035 samples placed in storage location		by _____	on _____	at _____

PC Secondary Review: W.S. 5/7/12

- Cooler Breakdown: Date: 5/7/12 Time: 1350 1900 by: RD
1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES NO
  2. Did all bottle labels and tags agree with custody papers?  YES NO
  3. Were correct containers used for the tests indicated?  YES NO
  4. Air Samples: Cassettes / Tubes Intact Cannisters Pressurized Tedlar® Bags Inflated RD 5/7/12 1845

Explain any discrepancies:

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO <sub>3</sub>								
≤2	H <sub>2</sub> SO <sub>4</sub>								
<4	NaHSO <sub>4</sub>								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub>	-	-						
	Zn Aceta	-	-						
	HCl	*	*	<u>client covered</u>					

\*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust:

Bottle lot numbers: client covered RD 5/7/12

Other Comments:

PC Secondary Review: MB/8/30/12

\*significant air bubbles: VOA &gt; 5-6 mm : WC &gt; 1 in. diameter

Service Request No: R1205125

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly - Soil/146898**

Dear Mr. Cadorette:

Enclosed are the results of the sample(s) submitted to our laboratory on August 8, 2012. For your reference, these analyses have been assigned our service request number **R1205125**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at [Mike.Perry@alsglobal.com](mailto:Mike.Perry@alsglobal.com).

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

Nicole Leja  
Laboratory Director

Spectrum Analytical holds certification in the State of New York for the analytes as indicated with an X in the "Cert." column within this report. Please note that the State of New York does not offer certification for all analytes. Please refer to our website for specific certification holdings in each state.

Please note that this report contains 10 pages of analytical data plus Chain of Custody document(s). When the Laboratory Report is indicated as revised, this report supersedes any previously dated reports for the laboratory ID(s) referenced above. Where this report identifies subcontracted analyses, copies of the subcontractor's test report are available upon request. This report may not be reproduced, except in full, without written approval from Spectrum Analytical, Inc.

*Spectrum Analytical, Inc. is a NELAC accredited laboratory organization and meets NELAC testing standards. Use of the NELAC logo however does not insure that Spectrum is currently accredited for the specific method or analyte indicated. Please refer to our "Quality" web page at [www.spectrum-analytical.com](http://www.spectrum-analytical.com) for a full listing of our current certifications and fields of accreditation. States in which Spectrum Analytical, Inc. holds NELAC certification are New York, New Hampshire, New Jersey and Florida. All analytical work for Volatile Organic and Air analysis are transferred to and conducted at our 830 Silver Street location (NY-11840, FL-E87936 and NJ-MA012).*

*Please contact the Laboratory or Technical Director at 800-789-9115 with any questions regarding the data contained in this laboratory report.*

The following outlines the condition of all EPH samples contained within this report upon laboratory receipt.

Matrices	Soil		
Containers	<input checked="" type="checkbox"/> Satisfactory		
Aqueous Preservative	<input checked="" type="checkbox"/>	N/A      pH≤2      pH>2      pH adjusted to <2 in lab	
Temperature	<input checked="" type="checkbox"/>	Received on ice      Received at 4 ± 2 °C	<input checked="" type="checkbox"/> Other: 0.8°C

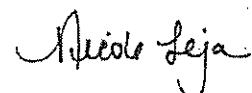

Were all QA/QC procedures followed as required by the EPH method? Yes

Were any significant modifications made to the EPH method as specified in Section 11.3? No

Were all performance/acceptance standards for required QA/QC procedures achieved? Yes

I attest that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Authorized by:

Nicole Leja  
Laboratory Director

**CASE NARRATIVE:**

The samples were received 0.8 degrees Celsius, please refer to the Chain of Custody for details specific to temperature upon receipt. An infrared thermometer with a tolerance of +/- 1.0 degrees Celsius was used immediately upon receipt of the samples.

If a Matrix Spike (MS), Matrix Spike Duplicate (MSD) or Duplicate (DUP) was not requested on the Chain of Custody, method criteria may have been fulfilled with a source sample not of this Sample Delivery Group.

**There is no relevant protocol-specific QC and/or performance standards non-conformances to report.**

## Notes and Definitions

dry	Sample results reported on a dry weight basis
NR	Not Reported
RPD	Relative Percent Difference

A Matrix Spike and Matrix Spike Duplicate (MS/MSD) for MADEP EPH CAM may not have been analyzed with the samples in this work order. According to the method these spikes are performed only when requested by the client. If requested the spike recoveries are included in the batch QC data.

**Laboratory Control Sample (LCS):** A known matrix spiked with compound(s) representative of the target analytes, which is used to document laboratory performance.

**Matrix Duplicate:** An intra-laboratory split sample which is used to document the precision of a method in a given sample matrix.

**Matrix Spike:** An aliquot of a sample spiked with a known concentration of target analyte(s). The spiking occurs prior to sample preparation and analysis. A matrix spike is used to document the bias of a method in a given sample matrix.

**Method Blank:** An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank should be carried through the complete sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process.

**Method Detection Limit (MDL):** The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.

**Reportable Detection Limit (RDL):** The lowest concentration that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions. For many analytes the RDL analyte concentration is selected as the lowest non-zero standard in the calibration curve. While the RDL is approximately 5 to 10 times the MDL, the RDL for each sample takes into account the sample volume/weight, extract/digestate volume, cleanup procedures and, if applicable, dry weight correction. Sample RDLs are highly matrix-dependent.

**Surrogate:** An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. These compounds are spiked into all blanks, standards, and samples prior to analysis. Percent recoveries are calculated for each surrogate.

**Continuing Calibration Verification:** The calibration relationship established during the initial calibration must be verified at periodic intervals. Concentrations, intervals, and criteria are method specific.

Project #: R1205125  
Received: 08/09/2012 10:00 AM  
Estimated completion: 08/23/2012 5:00 PM  
Sample temperature: 0.8°C

You may track the status of your samples and view results on Spectrum's eServices website at <http://www.spectrum-analytical.com/eservices/>. If you do not have an online account, you may sign up for one by completing the Internet Access Agreement form located at the bottom of the login page.

If you have any questions or concerns about your samples, please reply to this message.

To ensure delivery of laboratory report notices, please add [online@spectrum-analytical.com](mailto:online@spectrum-analytical.com) to your address book.

**COLUMBIA ANALYTICAL SERVICES, INC.**

<b>Client:</b>	Shaw Environmental, Inc	<b>Service Request No.:</b>	R1205125
<b>Project:</b>	Varian Beverly	<b>Project Number:</b>	146898
<b>Sample Matrix:</b>	Waste Solid	<b>Date Received:</b>	8/08/12

**CASE NARRATIVE**

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables. When appropriate to the method, method blank results have been reported with each analytical test.

**Sample Receipt**

Waste samples were collected on 8/02/12 and 8/03/12 received at CAS in good condition on 8/08/12 at a cooler temperature of 2.6 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the CAS cross-reference sheet for Client ID and CAS Lab ID #.

**Volatile Organics**

Three solid samples were analyzed for the Mass. CAM list of Volatile Organics by SW-846 Method 8260C. The samples were initially analyzed as medium level waste dilutions since the samples were collected in Terra Core vials.

All initial and continuing calibrations were compliant.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike/Blank Spike Duplicates (LCS/LCSD) recoveries were all within the QC limits except the LCSD recovery for Diethyl Ether (134 %) and 1,1-Dichloroethene (68 %) were outside limits have been flagged with an "\*".

All samples were analyzed within the required holding times except as noted above.

No other analytical or QC problems were encountered with these analyses.

**Semivolatile Organics**

One soil sample was analyzed for the TCL list of SVOAs by SW-846 method 8270D.

All the initial and continuing calibration criteria were met for all analytes.

All internal standard areas were within QC limits.

All surrogate standard recoveries were within QC limits.

All blank spike recoveries (LCS/LCSD) were within QC limits.

The Method Blanks associated with these samples were free of contamination.

All sample extractions were done within the 14 day extraction holding time.

No other analytical or QC problems were encountered.

**PCB Analysis**

One soil sample was analyzed for the TCL list of PCBs using SW-846 method 8082A.

All the initial and continuing calibration criteria were met for all analytes.

The Laboratory blanks associated with these samples were free of contamination.

All PCB surrogate standard recoveries were all with QC limits.

The Blank Spike (LCS/LCSD) recoveries were within QC limits.

All sample extractions were done within the 14 day extraction holding time.

No other analytical or QC problems were encountered.

**Metals Analysis**

One solid waste sample was analyzed for TCLP Metals using methods 6010C/7470 following the TCLP Extraction by method 1311. One solid waste sample was analyzed for RCRA Metals using methods 6010C/7471B.

All blank spike recoveries (LCS) were within QC limits of 80 – 120 %.

No other analytical or QC problems were encountered.

**EPH Analysis**

One soil sample was analyzed for MA EPH by the subcontract laboratory Spectrum Analytical, Inc. Their complete report is attached.

## CASE NARRATIVE

This report contains analytical results for the following samples:  
Service Request Number: R1205125

<u>Lab ID</u>	<u>Client ID</u>
R1205125-001	Trench 1 (Sanding Room)
R1205125-002	Trench 2 (Shipping)
R1205125-003	Roll Off
R1205125-004	Roll Off

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

### CAS/Rochester Lab ID # for State Certifications<sup>1</sup>

NELAP Accredited	Nevada ID # NY-00032
Connecticut ID # PH0556	New Jersey ID # NY004
Delaware Accredited	New York ID # 10145
DoD ELAP #65817	New Hampshire ID # 294100 A/B
Florida ID # E87674	North Carolina #676
Illinois ID #200047	Pennsylvania ID# 68-786
Maine ID #NY0032	Rhode Island ID # 158
Nebraska Accredited	Virginia #460167

<sup>1</sup> Analyses were performed according to our laboratory's NELAP-approved quality assurance program and any applicable state requirements. The test results meet requirements of the current NELAP standards or state requirements, where applicable, except as noted in the laboratory case narrative provided. For a specific list of accredited analytes, refer to the certifications section at [www.caslab.com](http://www.caslab.com).

## Cooler Receipt and Preservation Check Form

Project/Client Shaw Folder Number 812-5125

Cooler received on 8/8/12 by: AHbt COURIER: ALS UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO
2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO
3. Did all bottles arrive in good condition (unbroken)?  YES NO
4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles? YES NO (N/A)
5. Were Ice or Ice packs present?  YES NO
6. Where did the bottles originate? ALS/ROC CLIENT
7. Temperature of cooler(s) upon receipt: 2.6°

Is the temperature within 0° - 6° C?:  Yes Yes Yes Yes Yes

If No, Explain Below: No No No No No

Date/Time Temperatures Taken: 8/8/12 1034

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank Sample Bottle

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location	<u>R-002</u>	by <u>AHbt</u>	on <u>8/8/12</u> at <u>1039</u>
5035 samples placed in storage location	<u>R-005</u>	by <u>AHbt</u>	on <u>8/8/12</u> at <u>1030</u>

PC Secondary Review: 1038/12

Cooler Breakdown: Date: 8/8/12 Time: 1545 by: RJ

1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES NO
2. Did all bottle labels and tags agree with custody papers?  YES NO
3. Were correct containers used for the tests indicated?  YES NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated (N/A)

Explain any discrepancies: \_\_\_\_\_

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH

	9/4/2012 9/5, 9/6/2012 8/28, 8/29/2012

**Were any compounds identified in the method blank, field blank or trip blank above detection limits ?** No

**If so, list Sample ID/Compound/Concentration/Units:**

#### Notes:

For VOC analysis -Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. OB9-BR (100') BW-4 (12.3'), and OB9-DO (92') were subsequently reanalyzed at higher dilutions to bring target analytes within the calibration range method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

For RSK 175 analysis -Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the methods. OB9-BR (100') AP23-DO, BW-5 (9.4) and BW-9 (12') samples were re-analyzed at higher dilutions to bring target analytes within the calibration range of method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

Mr. Ray Cadorette  
Shaw Environmental & Infrastructure, Inc.  
100 Technology Center  
Stoughton, MA 02072

**Laboratory Results for: Varian Beverly/146898-02000000**

Dear Mr. Cadorette:

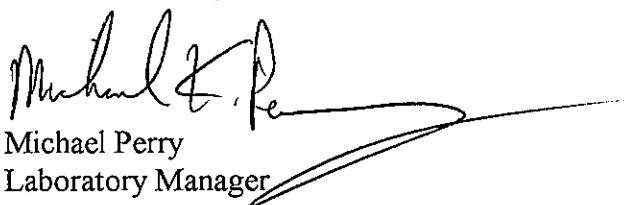

Enclosed are the results of the sample(s) submitted to our laboratory on August 22, 2012. For your reference, these analyses have been assigned our service request number **R1205492**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7469. You may also contact me via email at [Mike.Perry@alsglobal.com](mailto:Mike.Perry@alsglobal.com).

Respectfully submitted,

**Columbia Analytical Services, Inc. dba ALS Environmental**

  
Michael Perry  
Laboratory Manager

**Affirmative Responses to Questions A through F are required for "Presumptive Certainty" status**

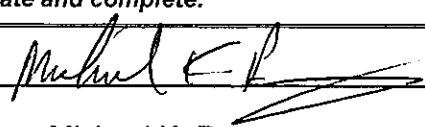

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	X Yes <input type="checkbox"/> No
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	X Yes <input type="checkbox"/> No
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	X Yes <input type="checkbox"/> No
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	X Yes <input type="checkbox"/> No
E	VPH, EPH, APH, and TO-15 only: a. VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications). b. APH and TO-15 Methods only: Was the complete analyte list reported for each method?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	X Yes <input type="checkbox"/> No

**Responses to Questions G, H and I below are required for "Presumptive Certainty" status**

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	X Yes <input type="checkbox"/> No <sup>1</sup>
<b>Data User Note:</b> Data that achieve "Presumptive Certainty" status may not necessarily meet the data usability and representativeness requirements described in 310 CMR 40.1056 (2)(k) and WSC-07-350.		
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	X Yes <input type="checkbox"/> No <sup>1</sup>
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	<input type="checkbox"/> Yes X No <sup>1</sup>

<sup>1</sup>All negative responses must be addressed in an attached laboratory narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## COLUMBIA ANALYTICAL SERVICES, INC.

**Client:** Shaw Environmental, Inc  
**Project:** Varian Beverly  
**Sample Matrix:** Water

**Service Request No.:** R1205492  
**Project Number:** 146898-02000000  
**Date Received:** 8/22/12

### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II, deliverables with Massachusetts CAM analyses reporting. When appropriate to the method, method blank results have been reported with each analytical test.

#### Sample Receipt

Water samples were collected on 8/21/12 and received at CAS in good condition at a cooler temperature of 4.1 °C as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory. See the second page of the Case Narrative for a cross-reference between Client ID and CAS Job #.

#### Volatile Organics

Eighteen water samples were analyzed for a site list of Volatile Organics by SW-846 Method 8260C.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples OB9-BR (100') BW-4 (12.3'), and OB9-DO (92') were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All initial and continuing calibrations were compliant.

All Surrogate Standard recoveries were within QC limits.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

All samples were analyzed within the required holding time of 14 days.

No other analytical or QC problems were encountered with these analyses.

#### Modified RSK-175

Eleven water samples were analyzed for the hydrocarbon gases Methane, Ethane, and Ethene by modified RSK-175.

Several samples were initially analyzed at dilutions to bring target analytes within the calibration range of the method. Samples OB9-BR (100'AP23-DO, BW-5 (9.4'), and BW-9 (12') were re-analyzed at larger dilutions to bring target analytes within the calibration range of the method. Both dilutions were reported with analytes over the calibration range flagged with an "E" and the diluted analytes flagged with a "D".

All the initial and continuing calibration criteria were met for all analytes.

The Blank Spike (LCS)/Blank Spike Duplicate (LCSD) recoveries were all within the QC limits.

The Method Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

**TOC Analyses**

Eleven water samples were analyzed for TOC by method SM20 5310C.

The initial and continuing calibration criteria were met for all analytes.

All Blank Spike (LCS) recoveries were within QC limits.

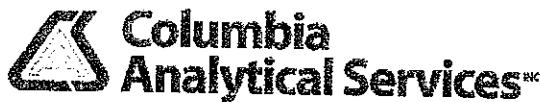

No analytical or QC problems were encountered.

## CASE NARRATIVE

This report contains analytical results for the following samples:

Service Request Number: R1205492

<u>Lab ID</u>	<u>Client ID</u>

## REPORT QUALIFIERS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.

**CAS/Rochester Lab ID # for Massachusetts Certification**  
M-NY032

Analyses were conducted in accordance with Massachusetts Department of Environmental Protection certification standards, except as noted in the laboratory case narrative provided. A copy of the current Department issued parameter list is included in this report.

## MAIN CUSODY/LABORATORY ANALYSIS REQUEST FORM

Analytical Services<sup>®</sup>

Page 74 of 76

## Cooler Receipt and Preservation Check Form

Project/Client Shaw Folder Number R17-5492

Cooler received on 8/22/12 by: AB COURIER: ALS  UPS FEDEX VELOCITY CLIENT

1. Were custody seals on outside of cooler?  YES NO
2. Were custody papers properly filled out (ink, signed, etc.)?  YES NO
3. Did all bottles arrive in good condition (unbroken)?  YES NO
4. Did VOA vials, Alkalinity, or Sulfide have significant\* air bubbles? YES  NO N/A
5. Were Ice or Ice packs present?  YES NO
6. Where did the bottles originate? ALS/ROG, CLIENT
7. Temperature of cooler(s) upon receipt: 4.1°

Is the temperature within 0° - 6° C?:  Yes Yes Yes Yes Yes

If No, Explain Below: No No No No No

Date/Time Temperatures Taken: 8/22/12 0908

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank / Sample Bottle  
If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location	<u>PC02</u>	by <u>AB</u>	on <u>8/22/12</u>	at <u>0910</u>
5035 samples placed in storage location		by	on	at

PC Secondary Review: M/K 8/22/12

Cooler Breakdown: Date: 8/22/12 Time: 1125 by: AB

1. Were all bottle labels complete (i.e. analysis, preservation, etc.)?  YES NO
2. Did all bottle labels and tags agree with custody papers?  YES NO
3. Were correct containers used for the tests indicated?  YES NO
4. Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated  N/A

Explain any discrepancies: \_\_\_\_\_

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO <sub>3</sub>								
≤2	H <sub>2</sub> SO <sub>4</sub>			<u>WC1120714</u>	<u>7/12</u>				
<4	NaHSO <sub>4</sub>								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub>	-	-						
	Zn Aceta	-	-						
	HCl	*	*	<u>4111010</u>	<u>0/12</u>				

\*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: \_\_\_\_\_

Bottle lot numbers: 2-143-001, 2-143-002

Other Comments: \_\_\_\_\_

PC Secondary Review: M/K 9/10/12

\*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

**APPENDIX D**

**VOC TREND GRAPHS**

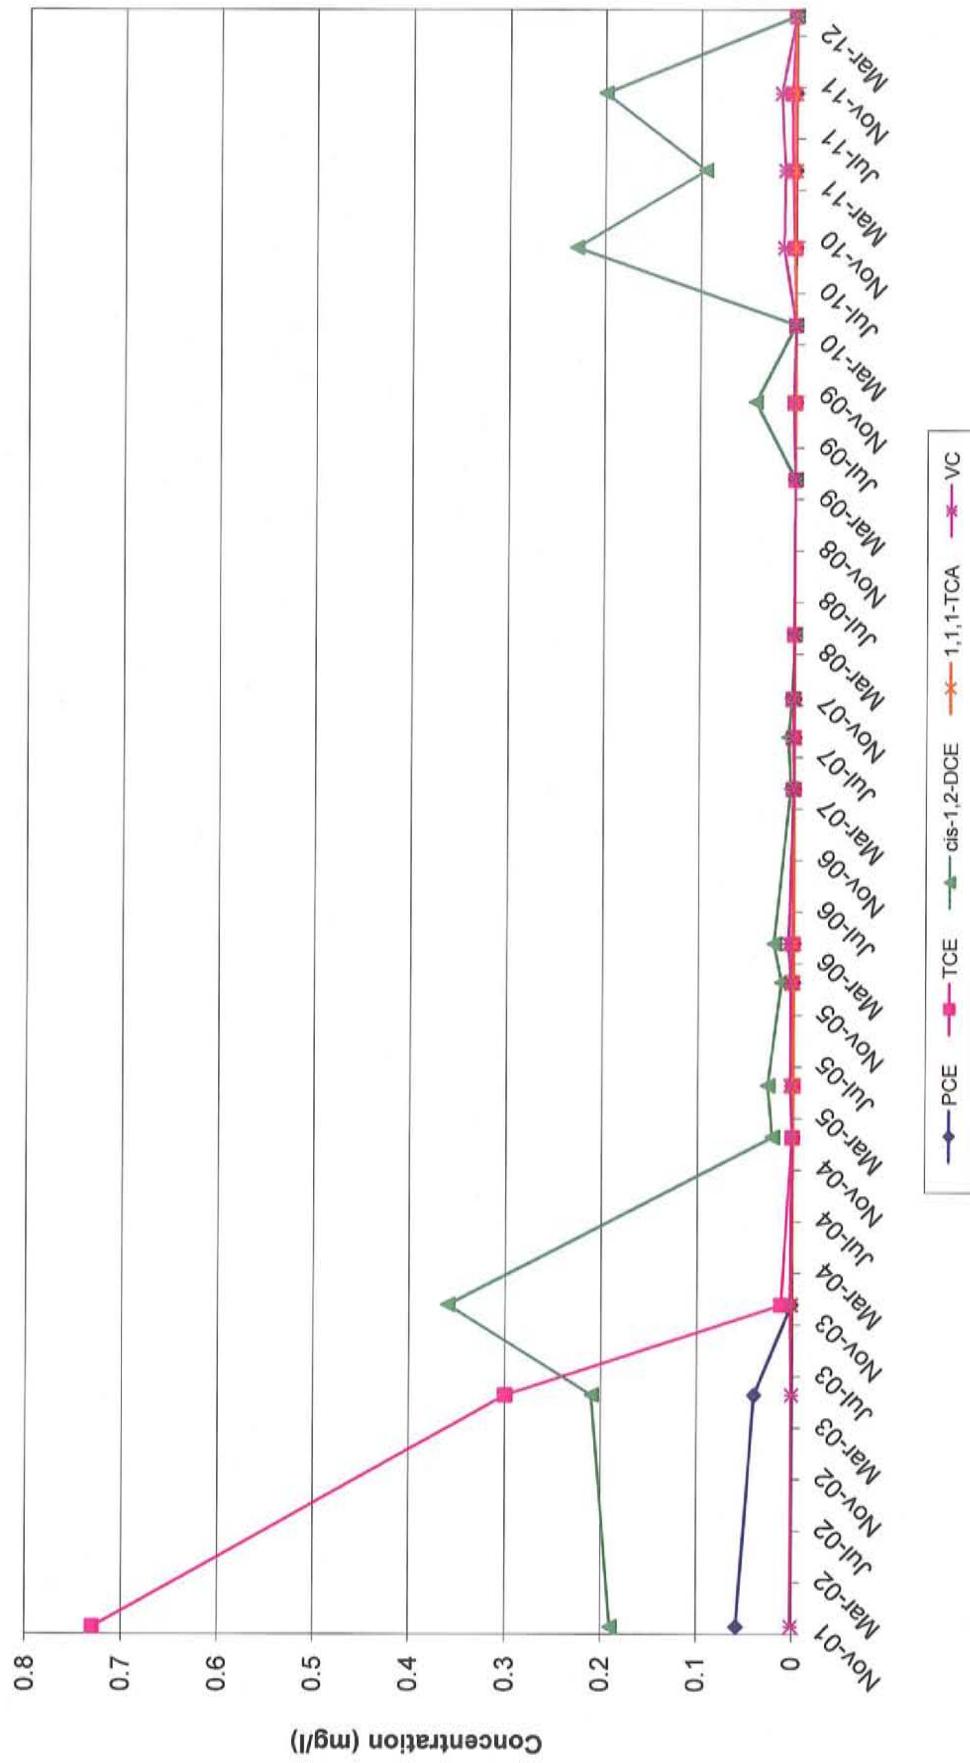

**TOZER ROAD NORTH OF ROUTE 128**

**VOC Trends in Well BR-1\_ZONE3**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

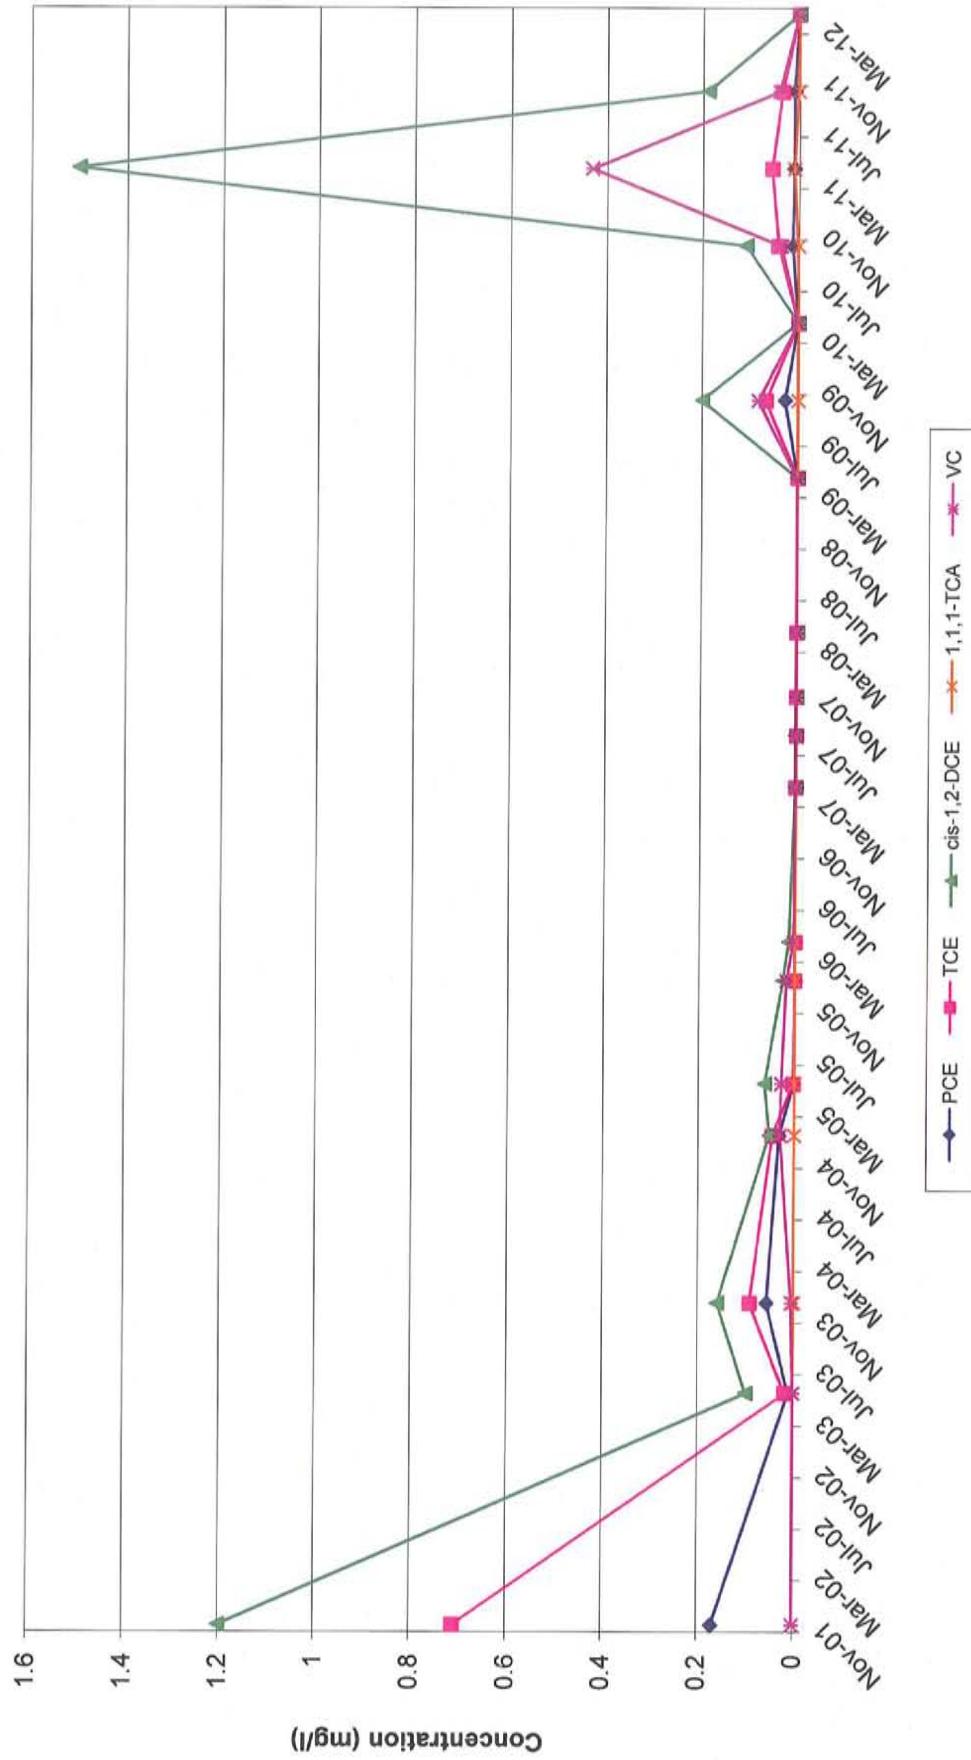

Notes: BR-1 ZONE3 is the shallowest zone of a bedrock well on Walden Street.  
See end of appendix for additional notes.

VOC Trends in Well BR-1\_ZONE2  
 Former Varian Facility Site  
 Beverly, Massachusetts

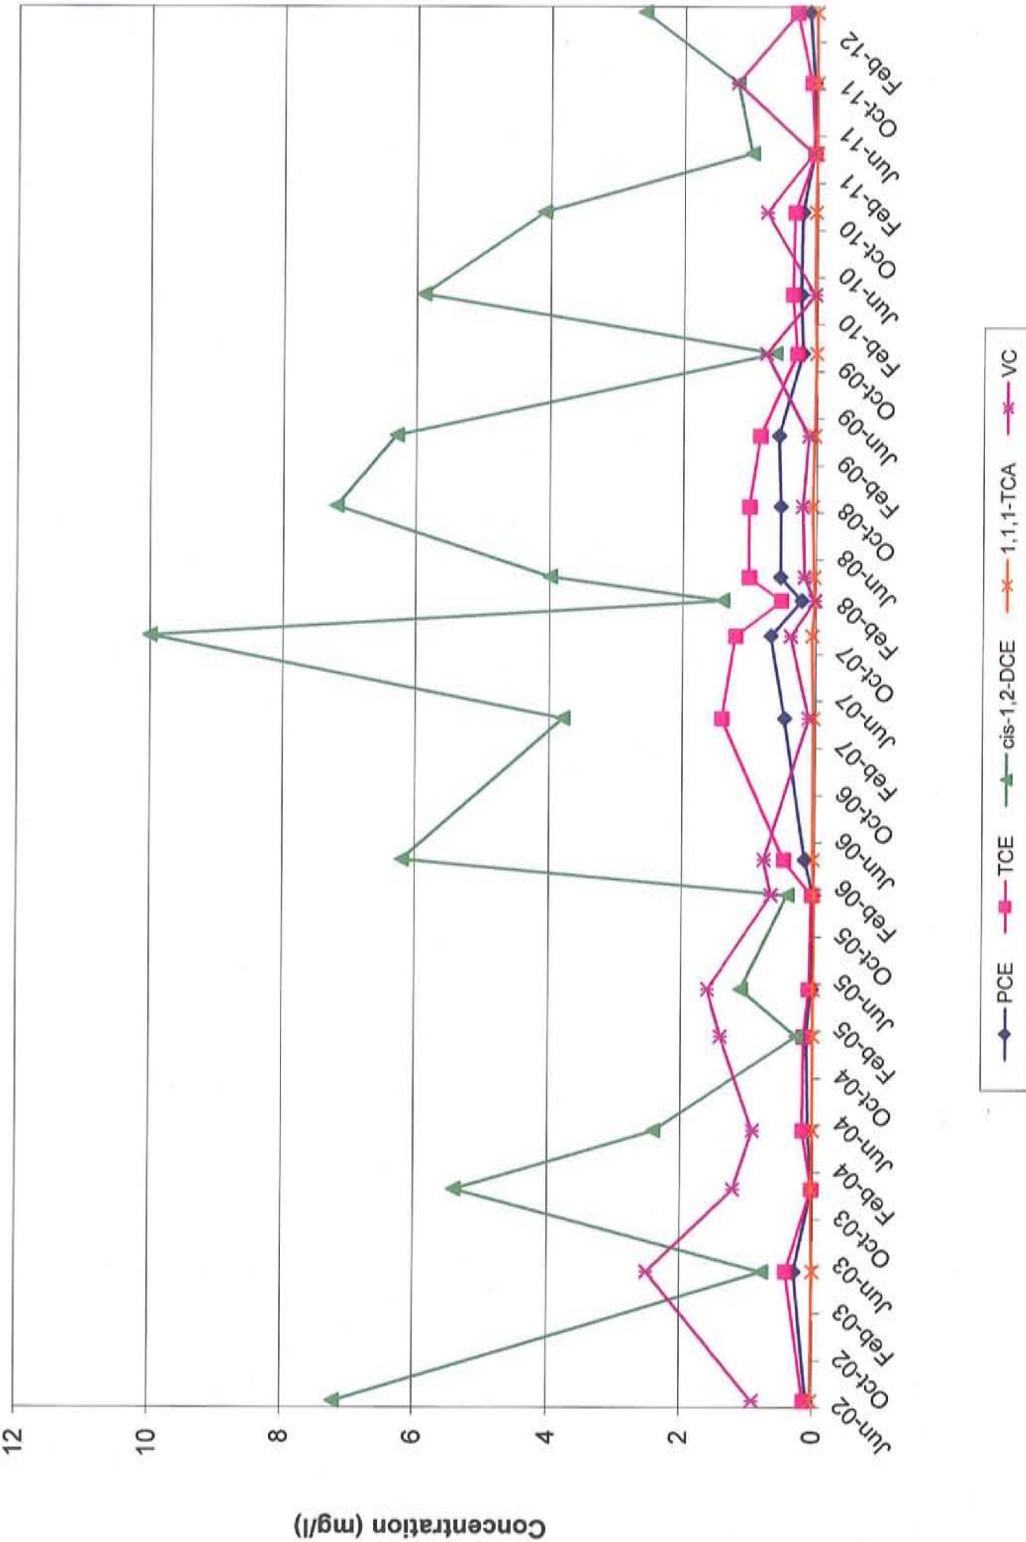

Notes: BR-1 ZONE2 is the middle depth zone of a bedrock well on Walden Street.  
 See end of appendix for additional notes.

## VOC Trends in Well BR-1\_ZONE1 Former Varian Facility Site Beverly, Massachusetts

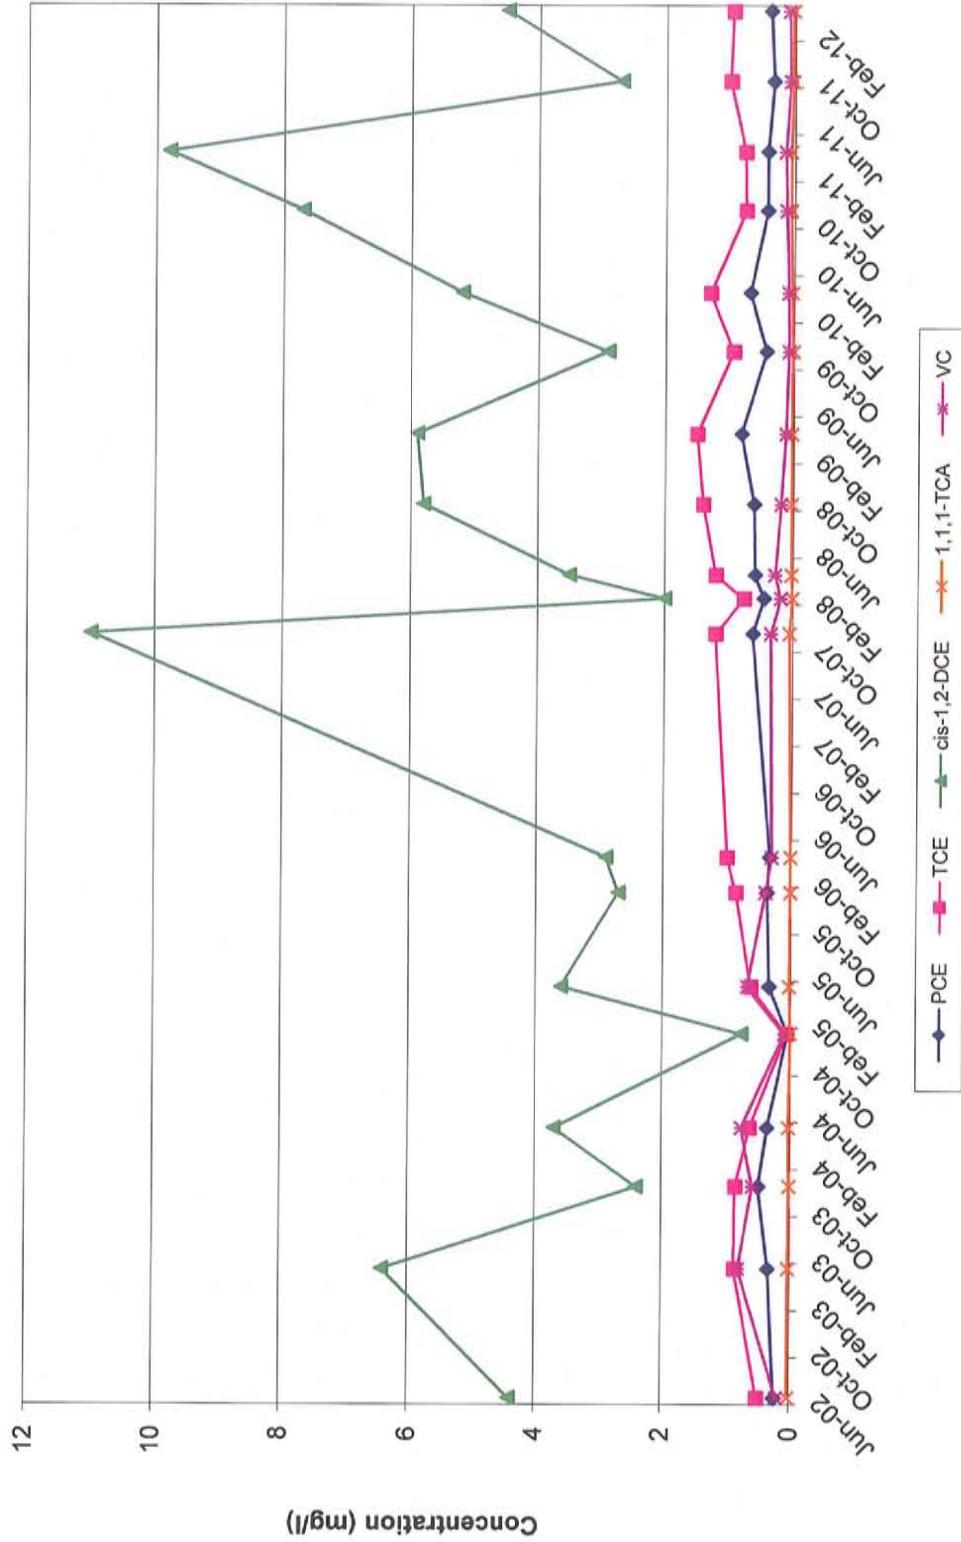

Notes: BR-1 ZONE1 is the deepest zone of a bedrock well on Walden Street.  
See end of appendix for additional notes.

VOC Trends in Well CL09-BR\_ZONE3  
 Former Varian Facility Site  
 Beverly, Massachusetts

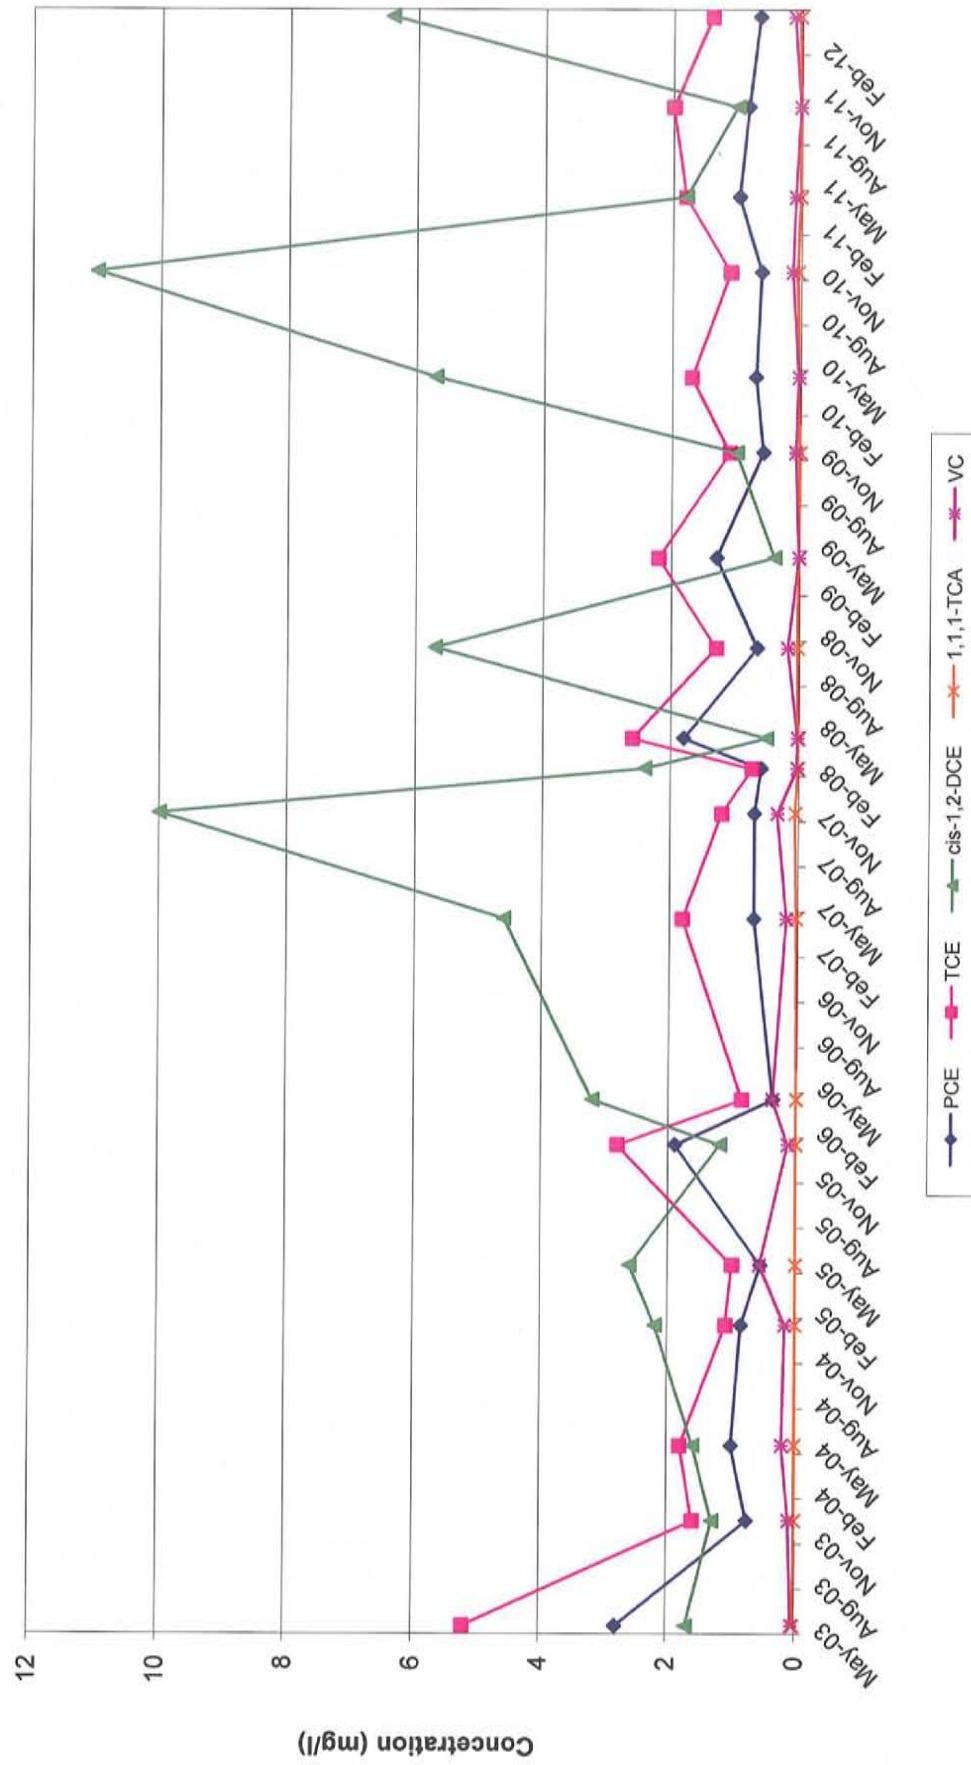

Notes: CL09-BR ZONE3 is the shallowest zone of a bedrock well north of Route 128, west of Tozer Road.  
 See end of appendix for additional notes.

**VOC Trends in Well CL09-BR\_ZONE2**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

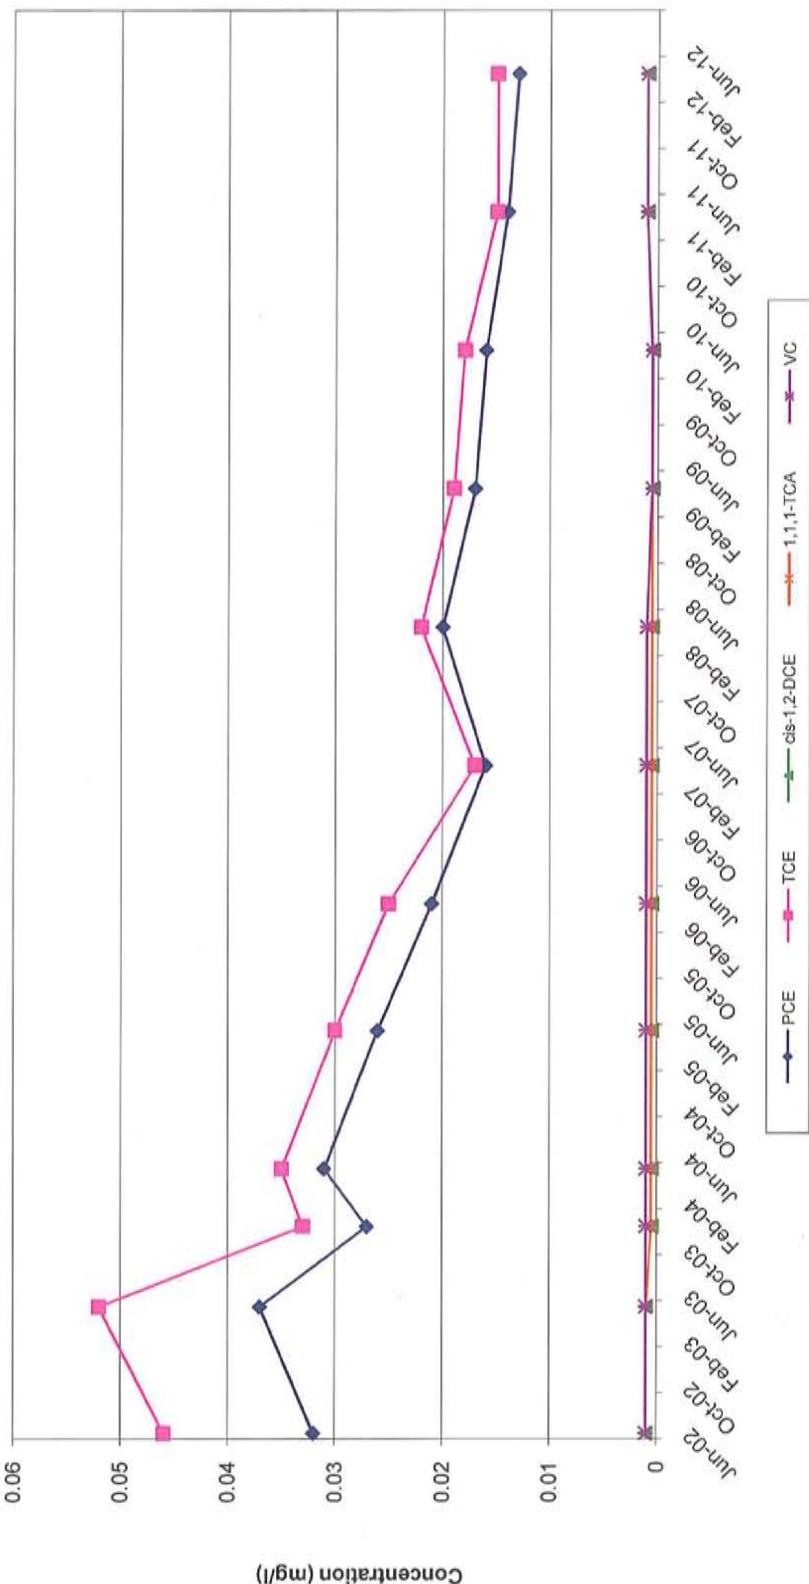

Notes: CL09-BR ZONE2 is the middle depth zone of a bedrock well north of Route 128, west of Tozer Road.  
See end of appendix for additional notes.

VOCs in Well CL09-BR\_ZONE1  
 Former Varian Facility Site  
 Beverly, Massachusetts

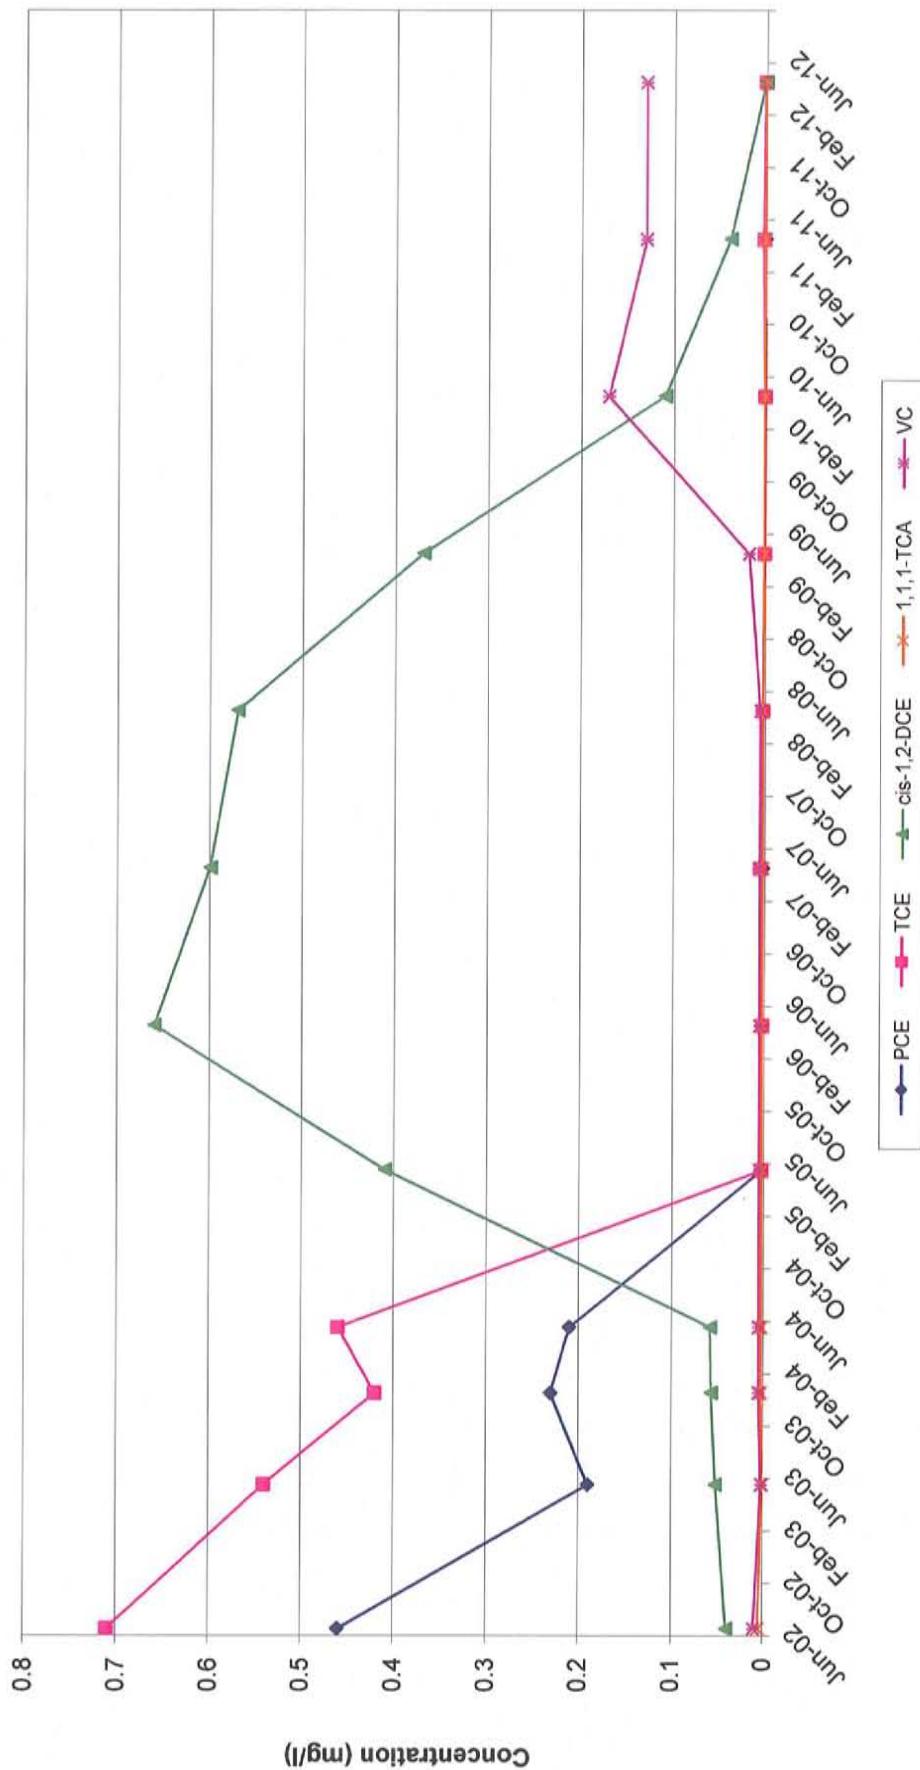

Notes: CL09-BR ZONE1 is the deepest zone of a bedrock well north of Route 128, west of Tozer Road.  
 See end of appendix for additional notes.

VOC Trends in Well OB-17-DO  
Former Varian Facility Site  
Beverly, Massachusetts

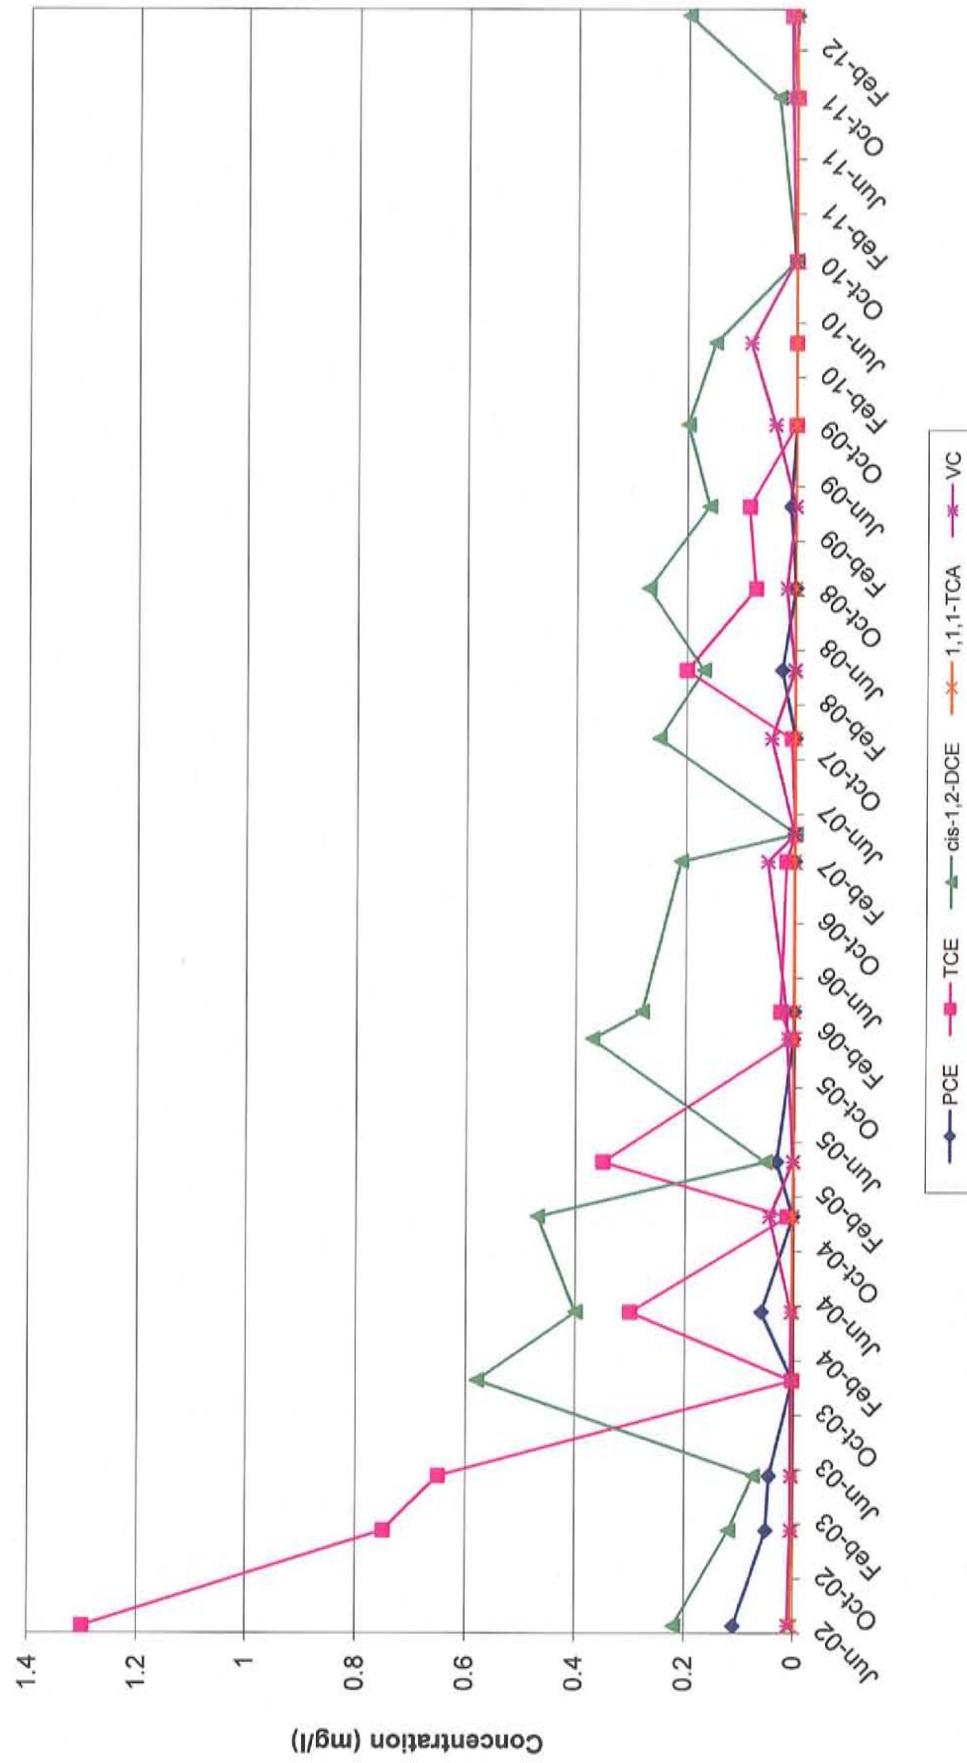

Notes: OB17-DO is a deep overburden well north of Route 128 on Commons Drive.  
See end of appendix for additional notes.

**VOC Trends in Well OB-17-BR  
Former Varian Facility Site  
Beverly, Massachusetts**

Notes: OB17-BR is a bedrock well north of Route 128 on Commons Drive.  
See end of appendix for additional notes.

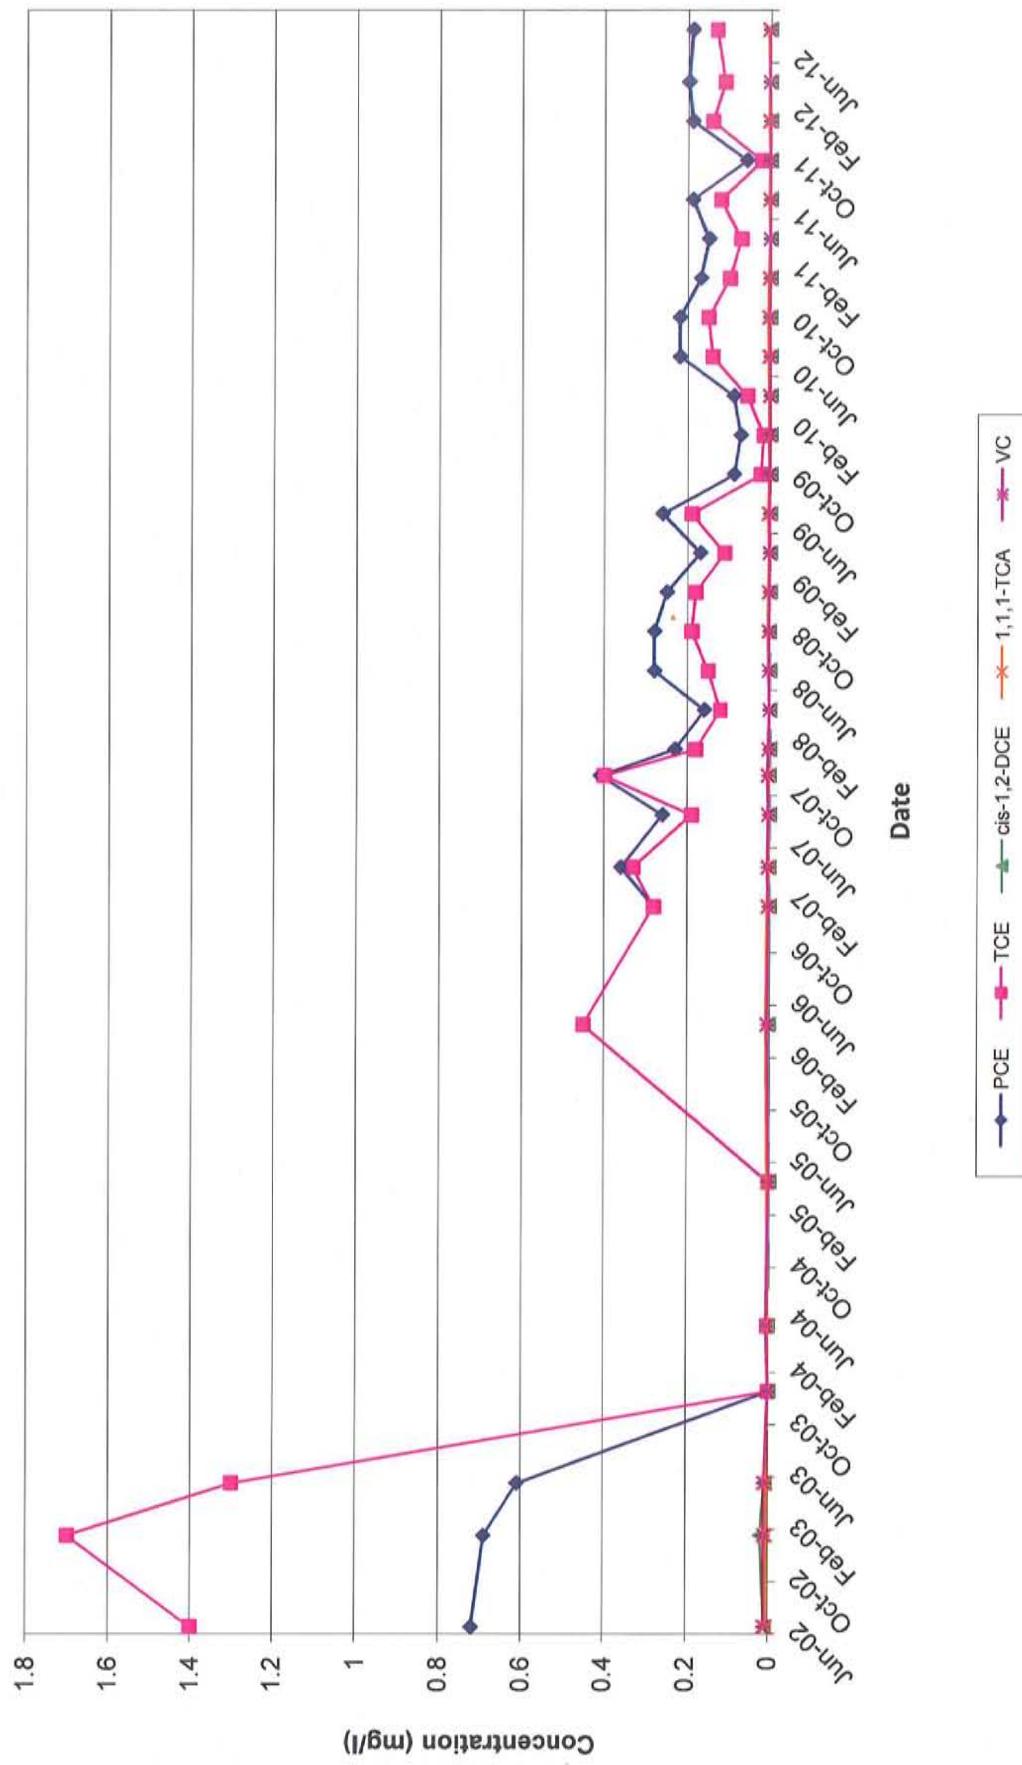

VOC Trends in Well CL02-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

Notes: CL02-BR is a bedrock well north of Route 128 at 16 Tozer Road.  
 See end of appendix for additional notes.

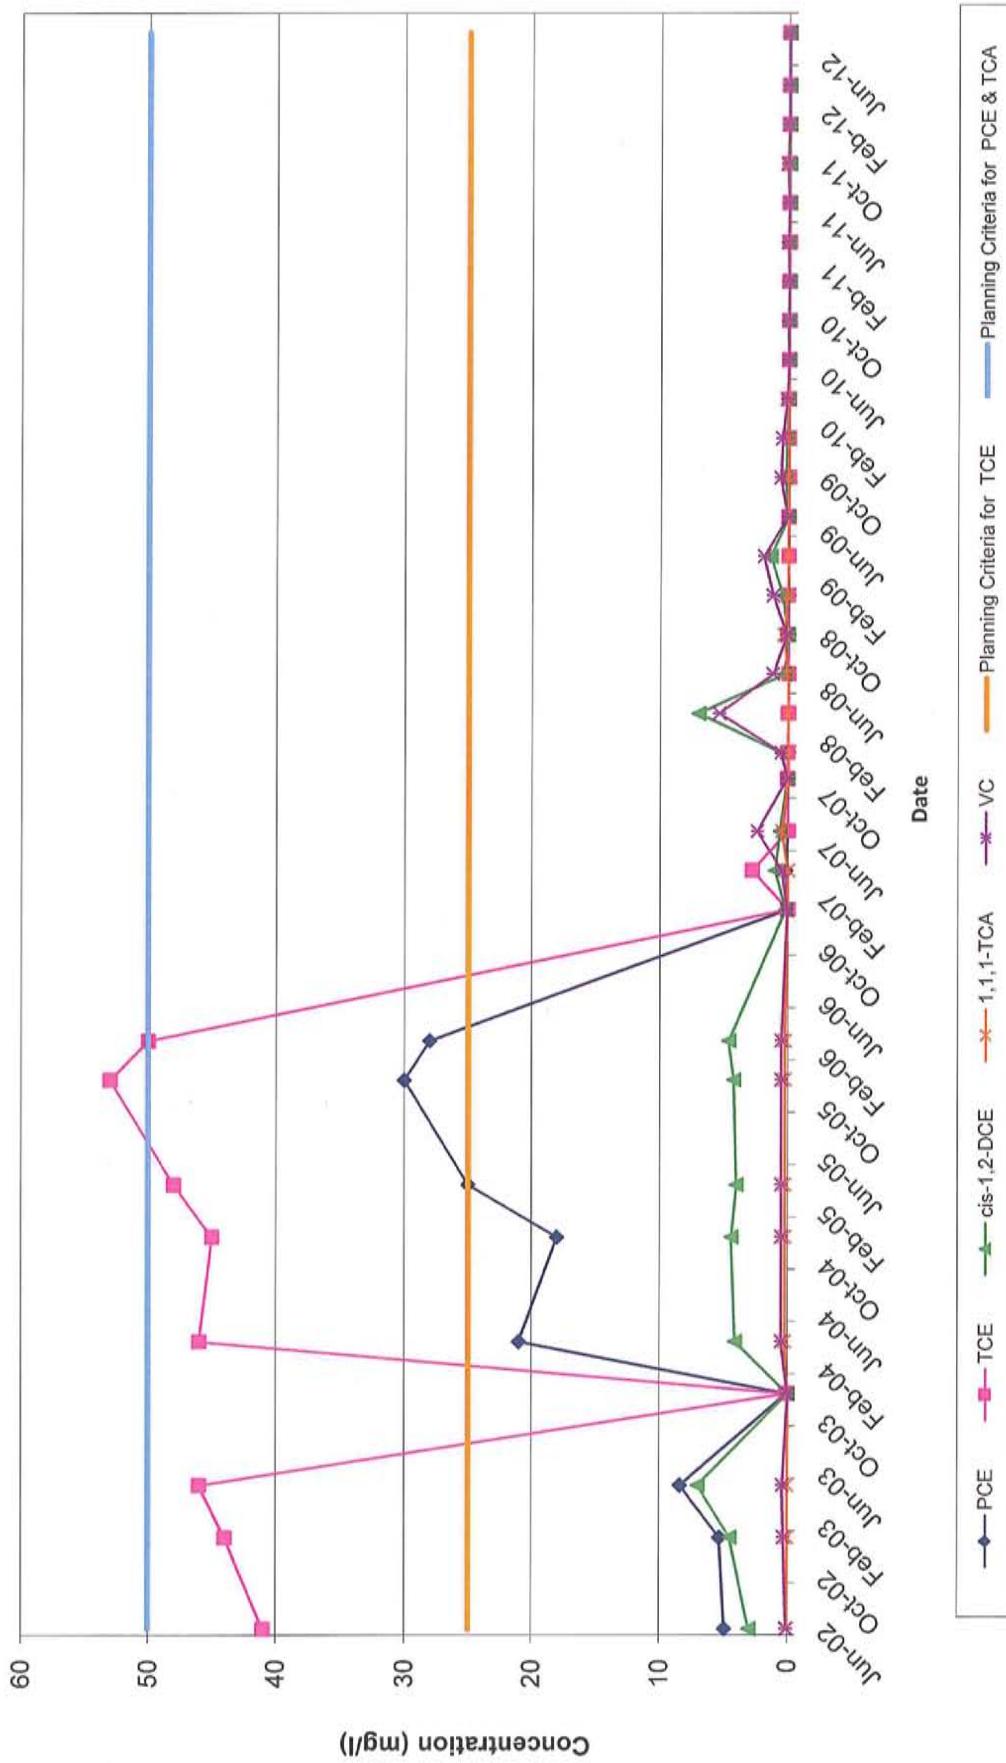

**BUILDING 3/6 TREATMENT AREA**

VOC Trends in Well OB-12-S  
 Former Varian Facility Site  
 Beverly, Massachusetts

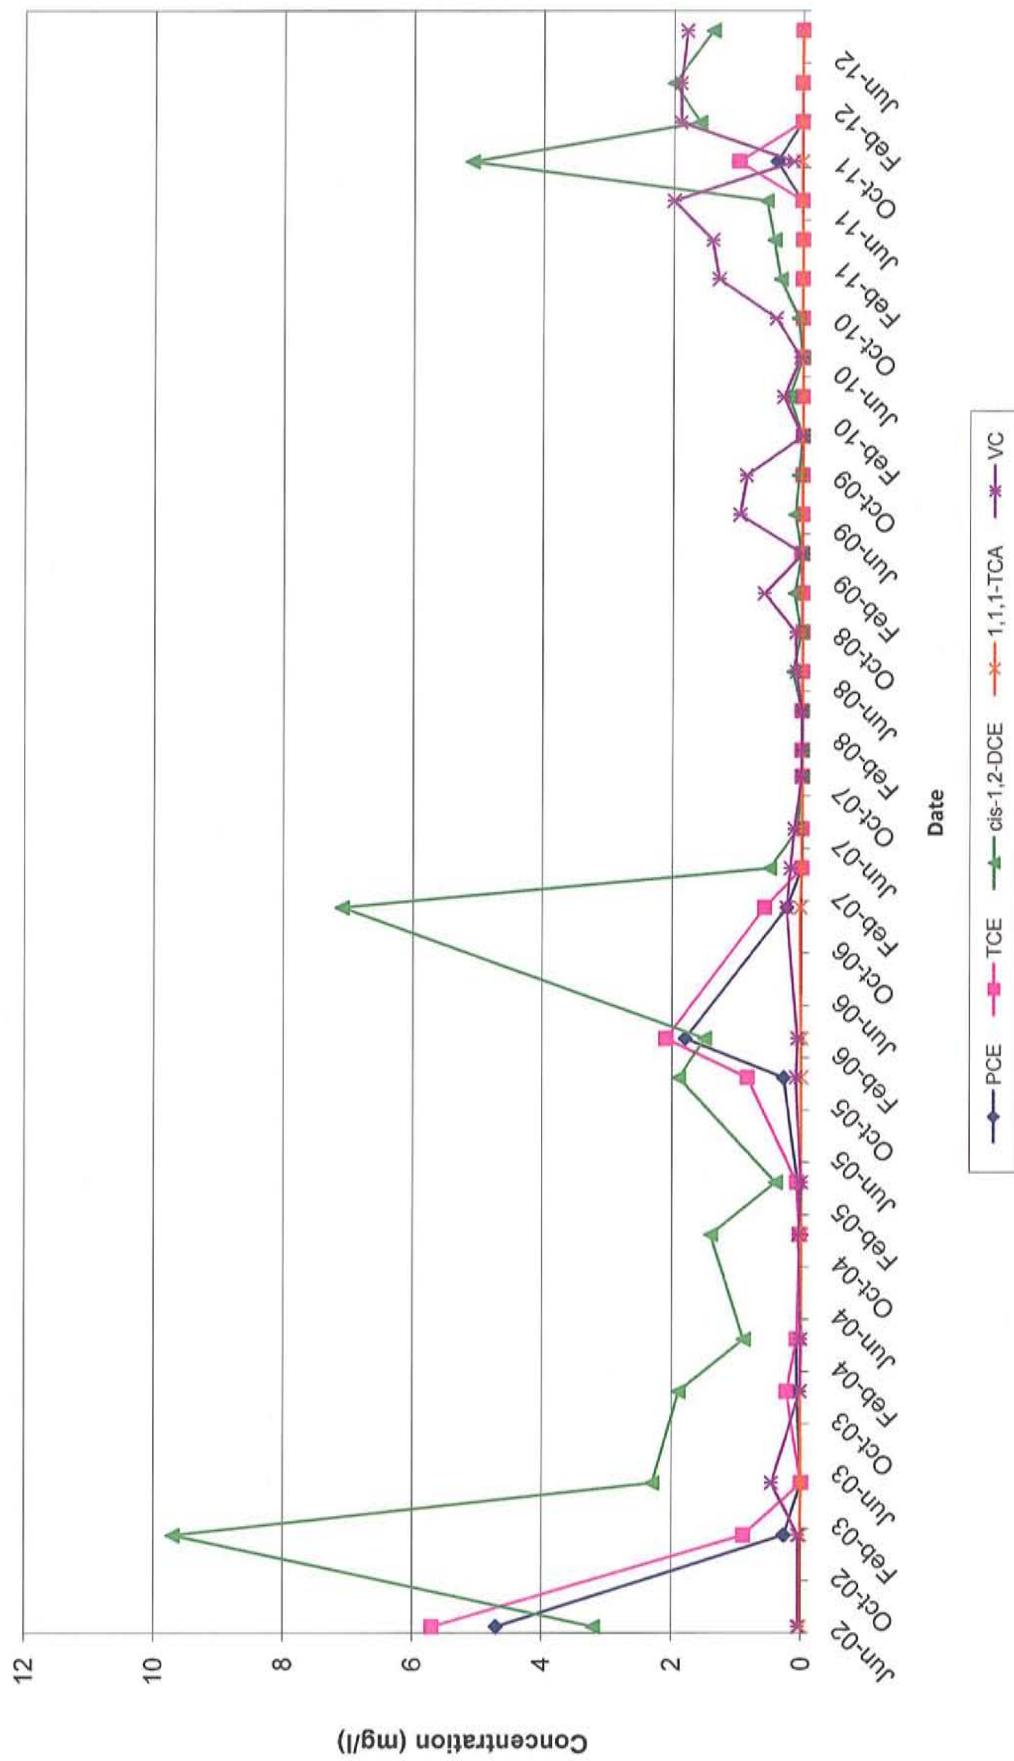

Note: OB-12-S is a shallow overburden well north of Building 3 where permanganate injection was completed in 2003.  
 See end of appendix for additional notes.

VOC Trends in Well OB-09-S  
Former Varian Facility Site  
Beverly, Massachusetts

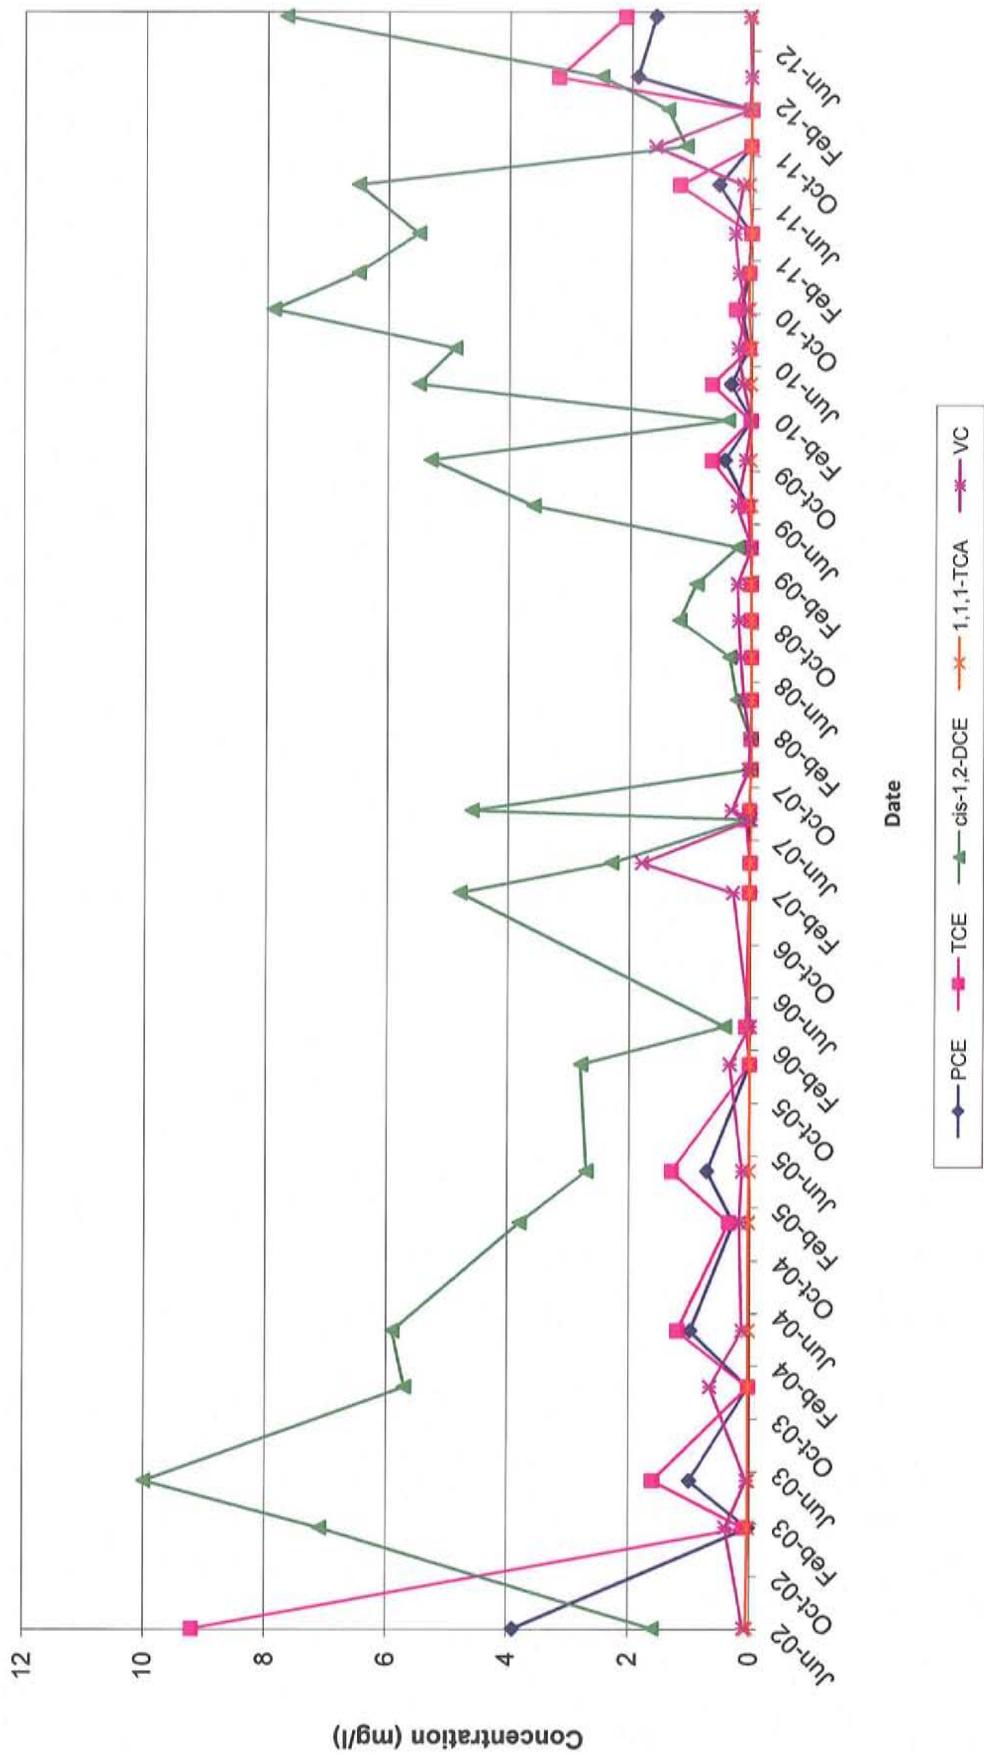

Note: OB-9-S is a shallow well east of Building 9.  
Bio-injection was completed from 2006 to 2012.  
See end of appendix for additional notes.

**VOC Trends in Well OB-09-DO**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

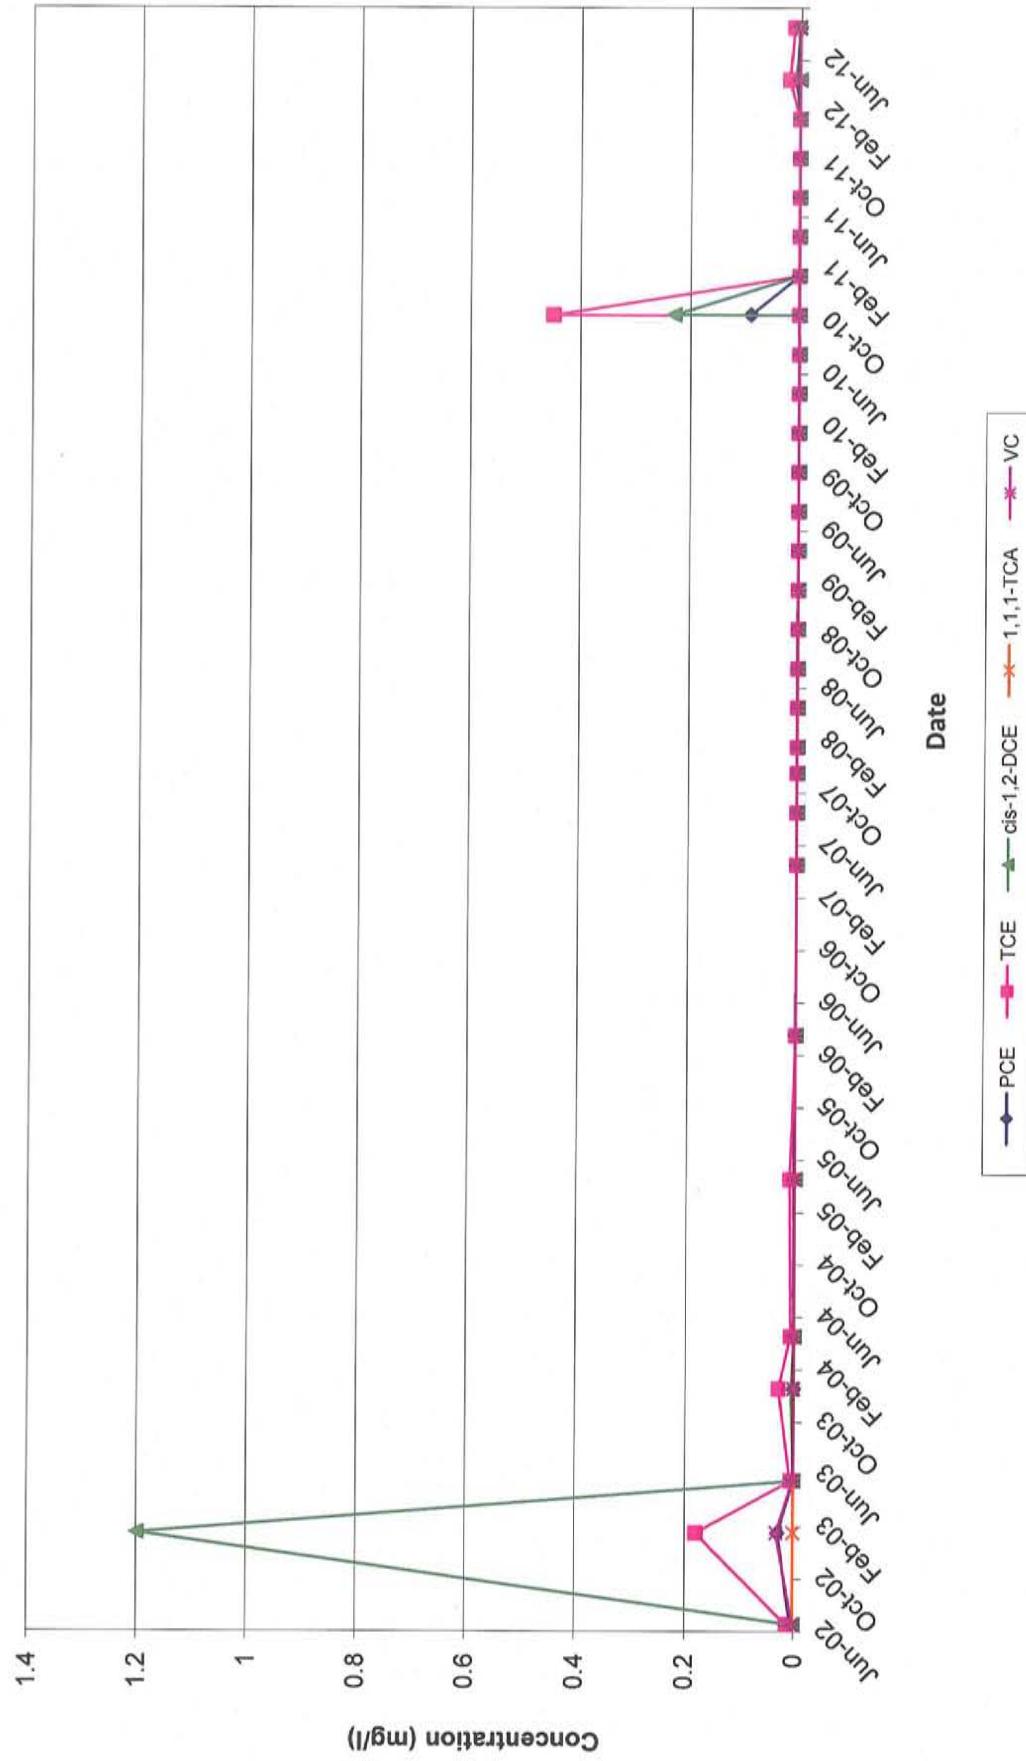

Note: OB-9-DO is a deep overburden well east of Building 9.  
See end of appendix for additional notes.

**VOC Trends in Well OB-09-BR**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

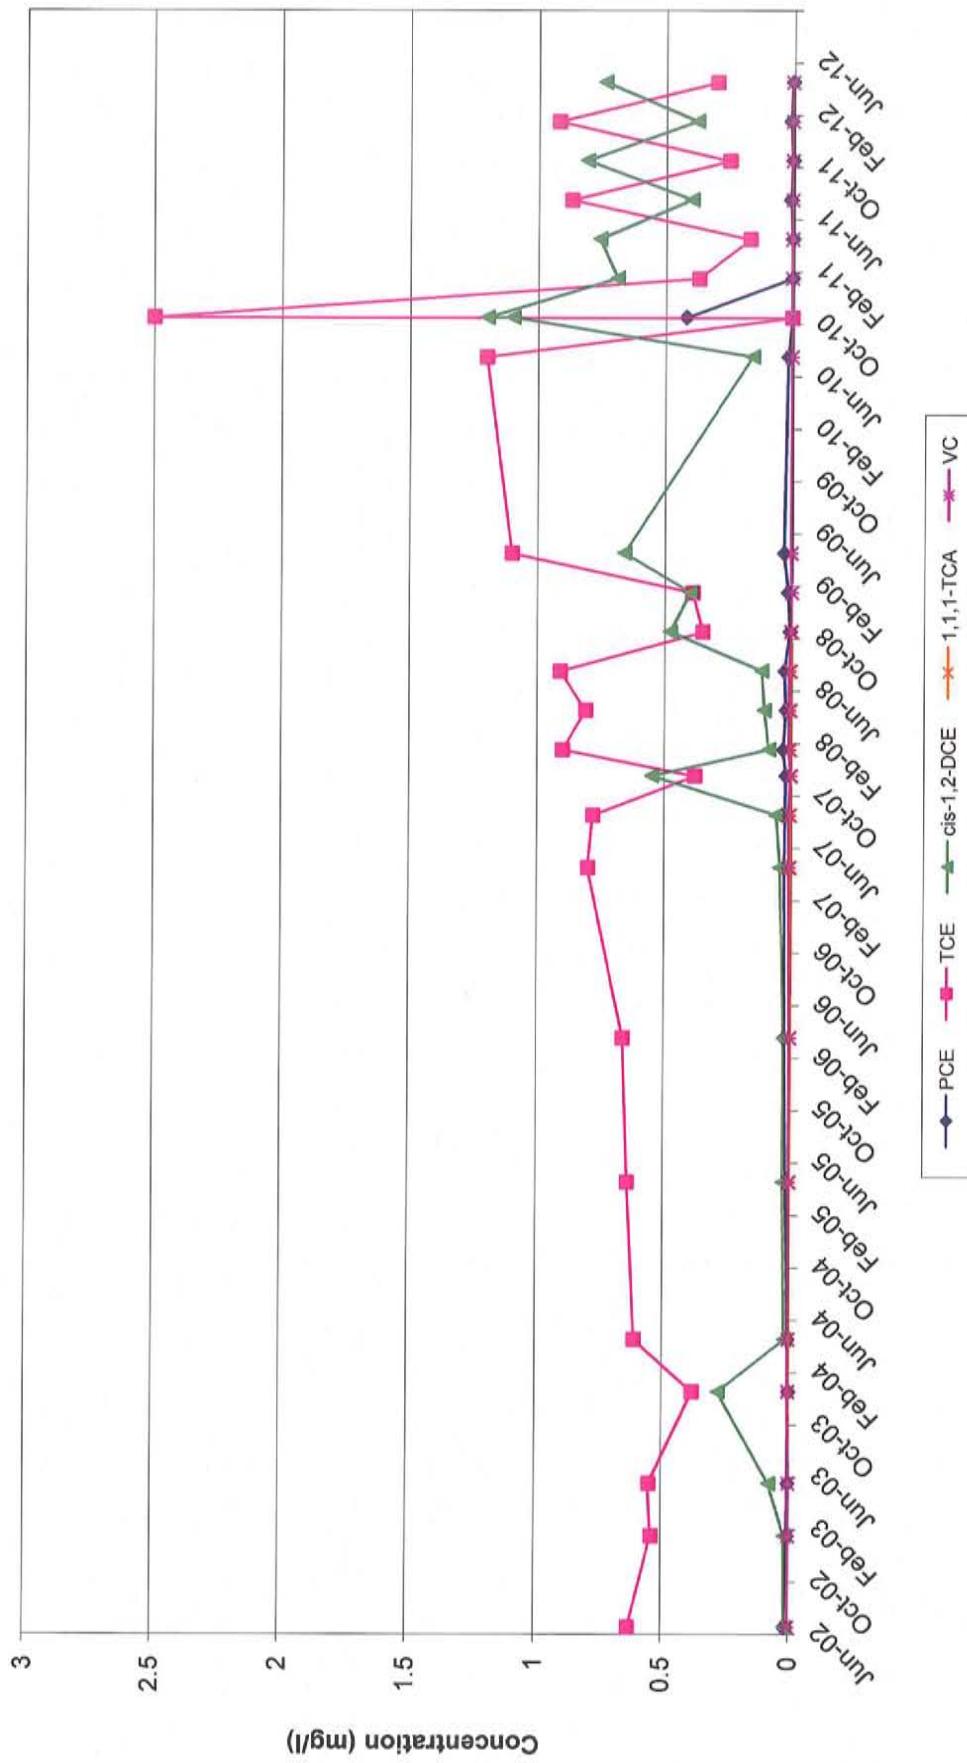

Note: OB-9-BR is a bedrock well east of Building 9.  
See end of appendix for additional notes.

VOC Trends in Well OB-10-S  
 Former Varian Facility Site  
 Beverly, Massachusetts

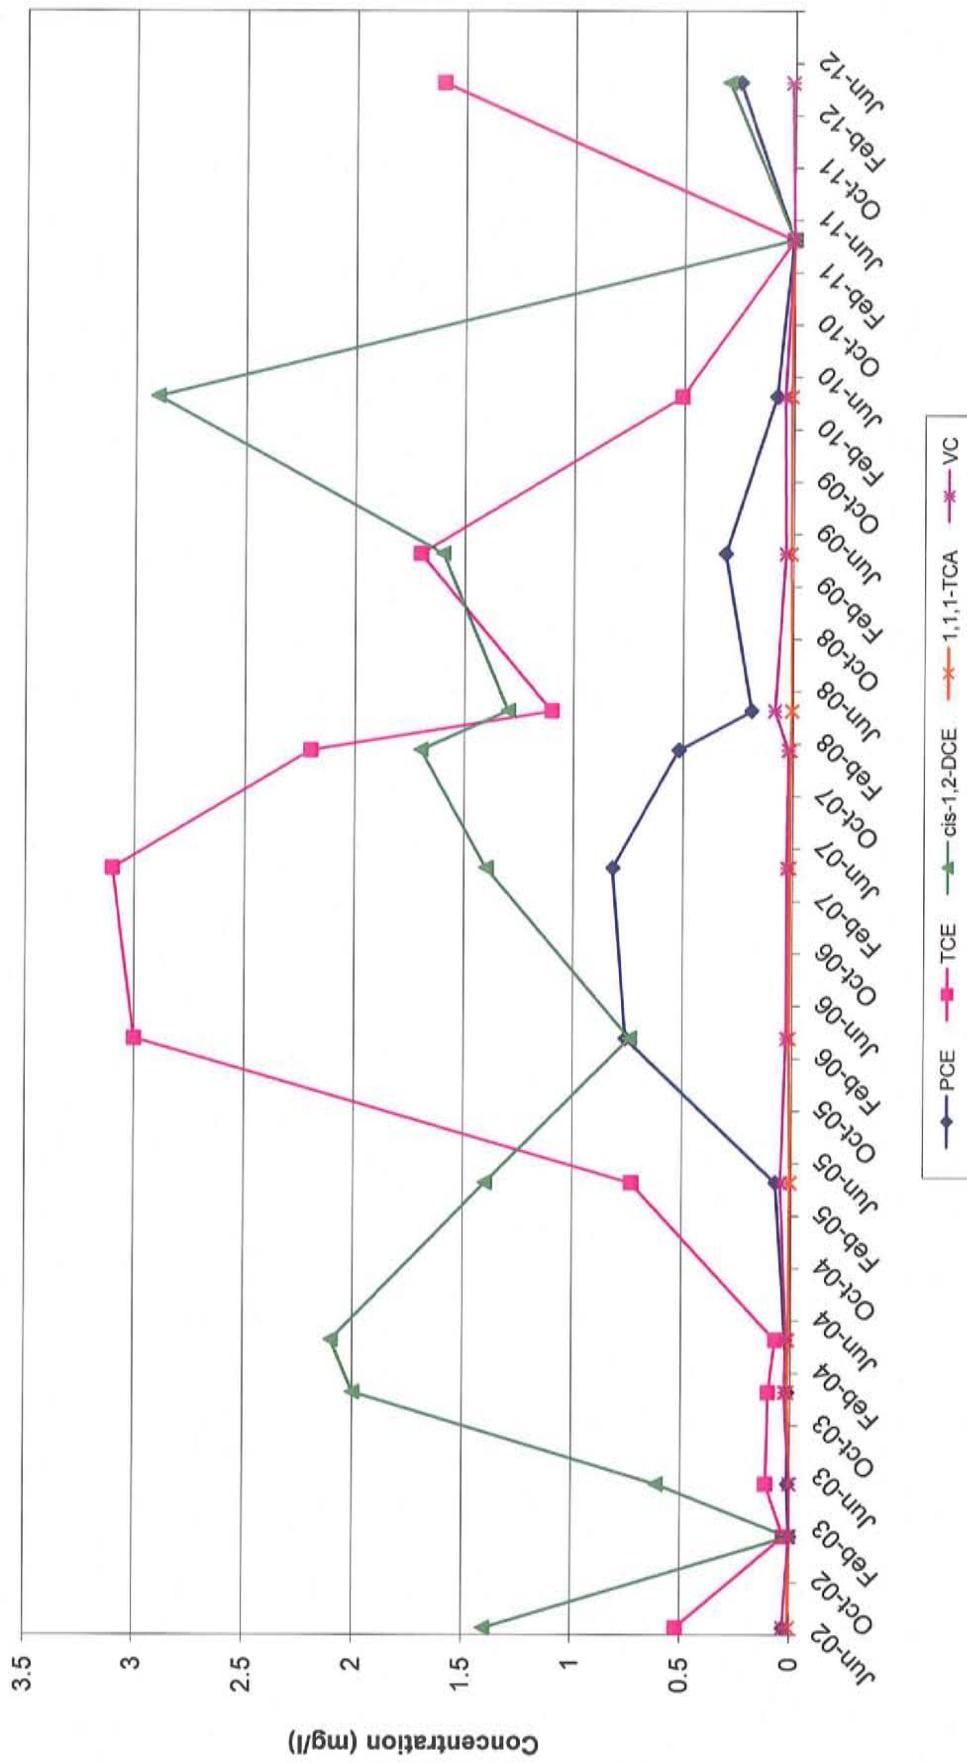

Note: OB-10-S is a shallow well adjacent to Building 4.  
 See end of appendix for additional notes.

**VOC Trends in Well OB-10-DO  
Former Varian Facility Site  
Beverly, Massachusetts**

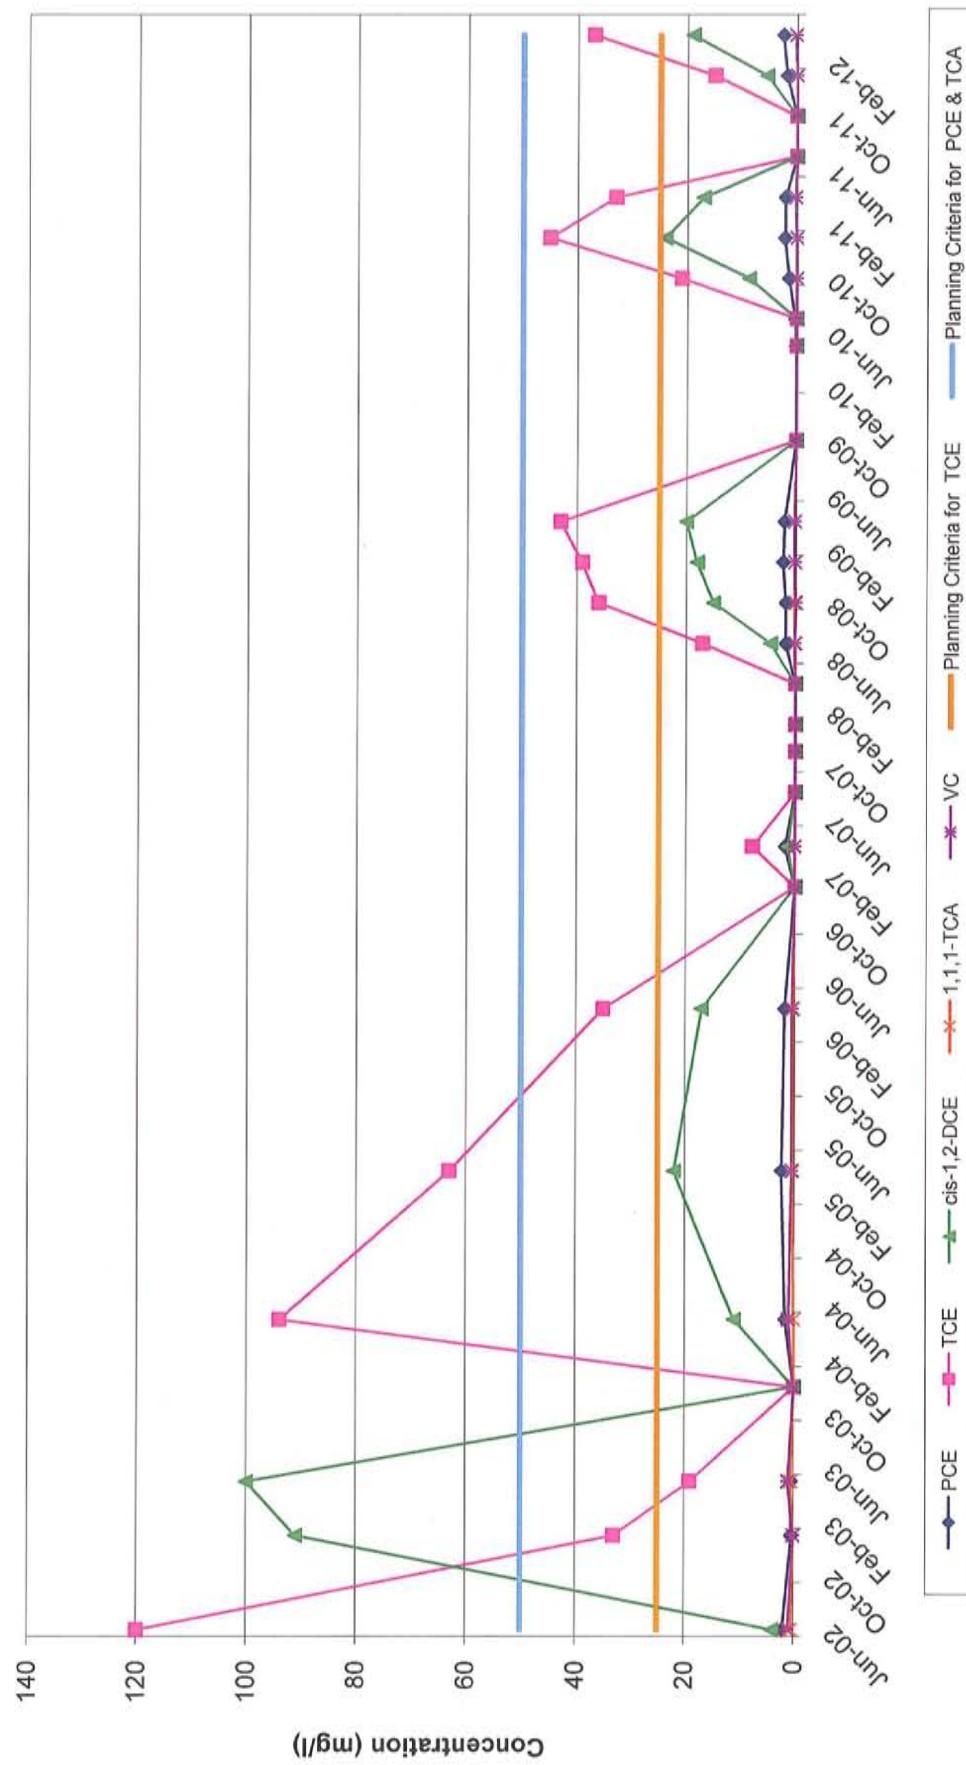

Note: OB-10-DO is a deep overburden well adjacent to Building 4.  
See end of appendix for additional notes.

VOC Trends in Well OB-10-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

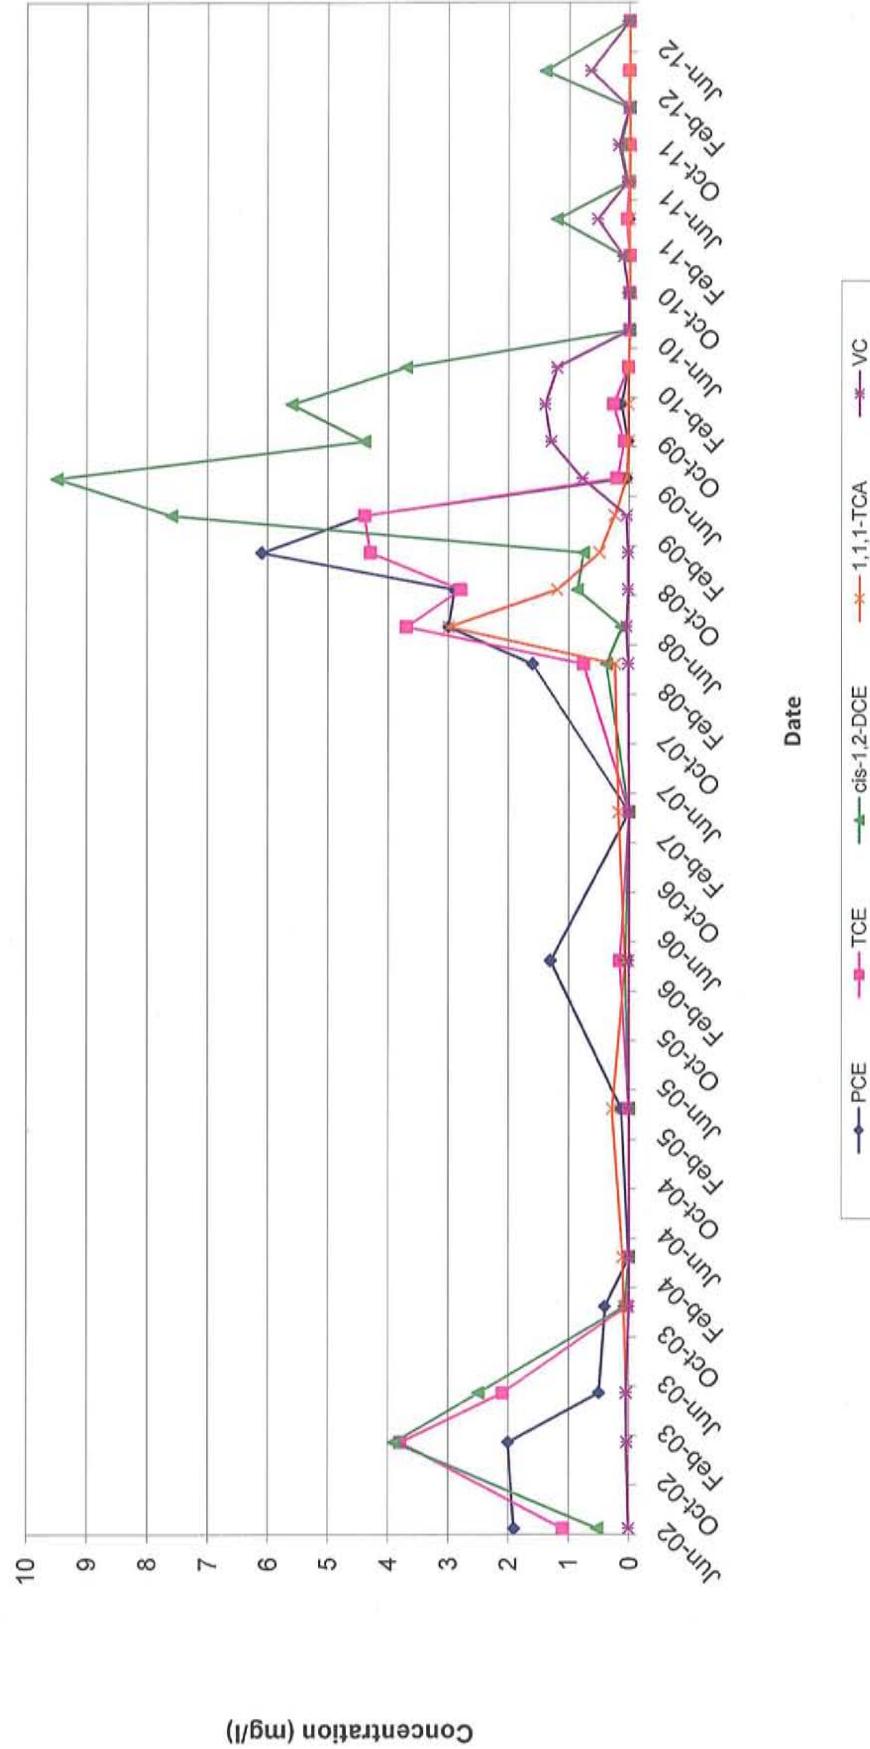

Note: OB-10-BR is a bedrock well adjacent to Building 4 where permanganate injection was completed in 2010. See end of appendix for additional notes.

VOC Trends in Well OB-12-DO  
Former Varian Facility Site  
Beverly, Massachusetts

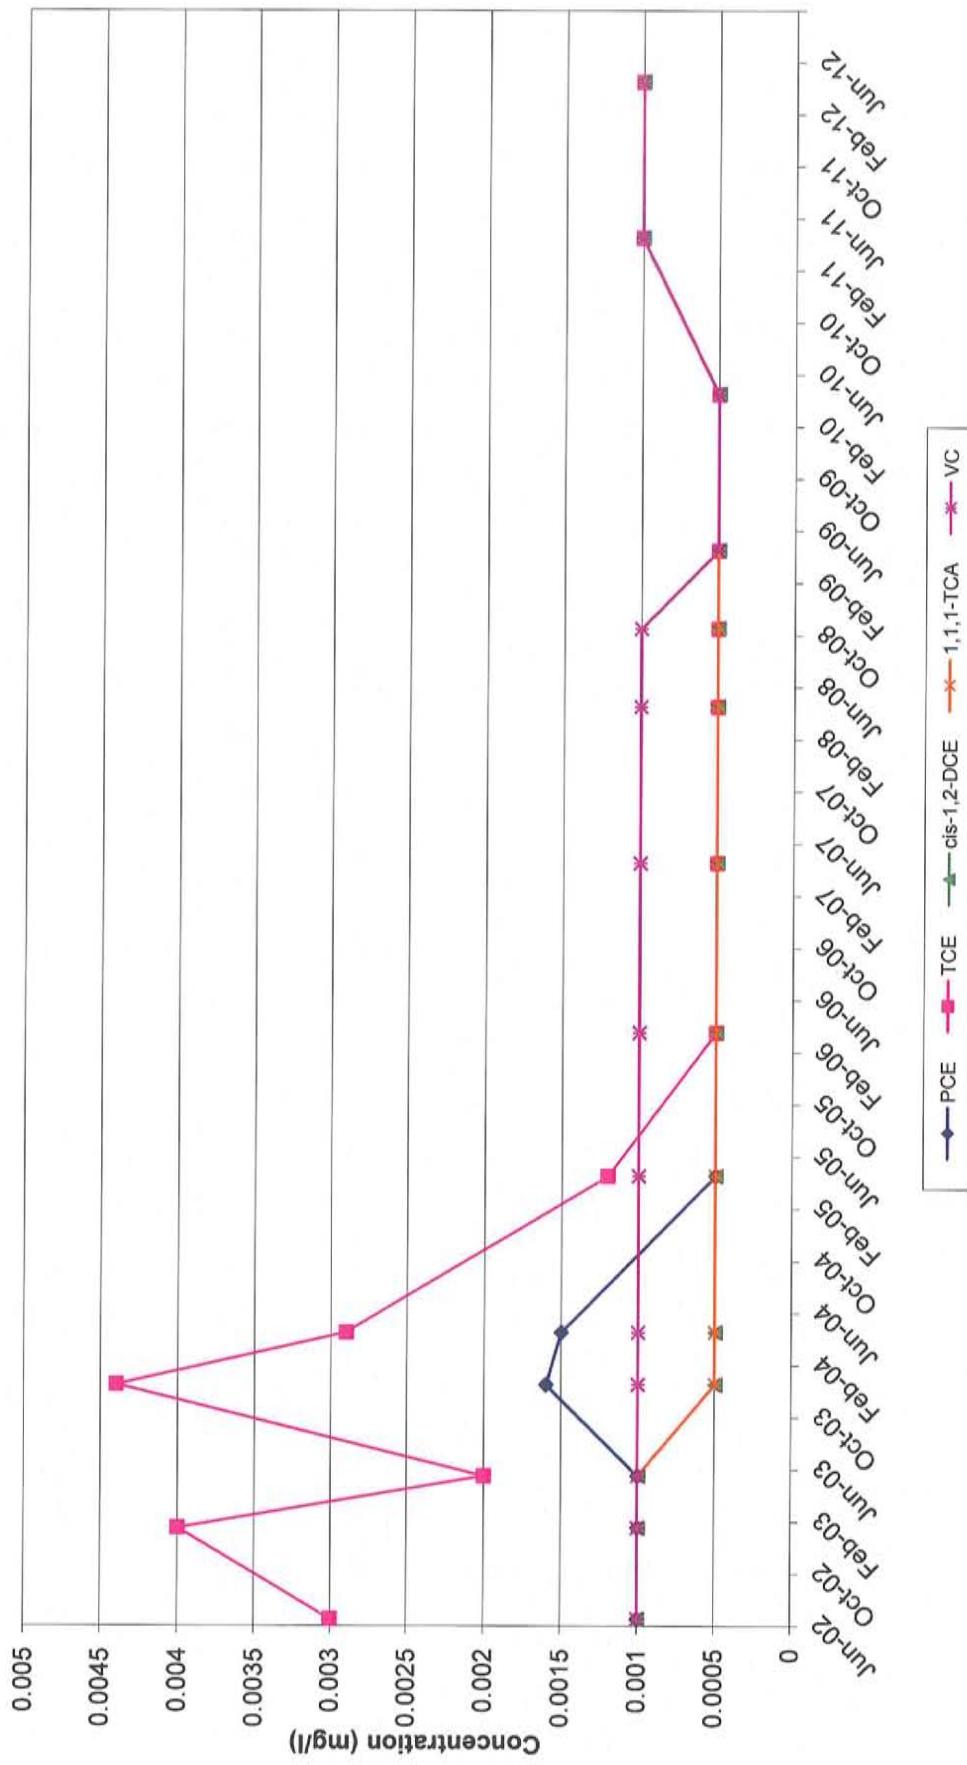

Note: OB-12-DO is a deep overburden well north of Building 3.  
Permanganate injection completed 2003-2007, 2009, 2011 and 2012.  
See end of appendix for additional notes.

VOC Trends in Well OB-15-S  
 Former Varian Facility Site  
 Beverly, Massachusetts

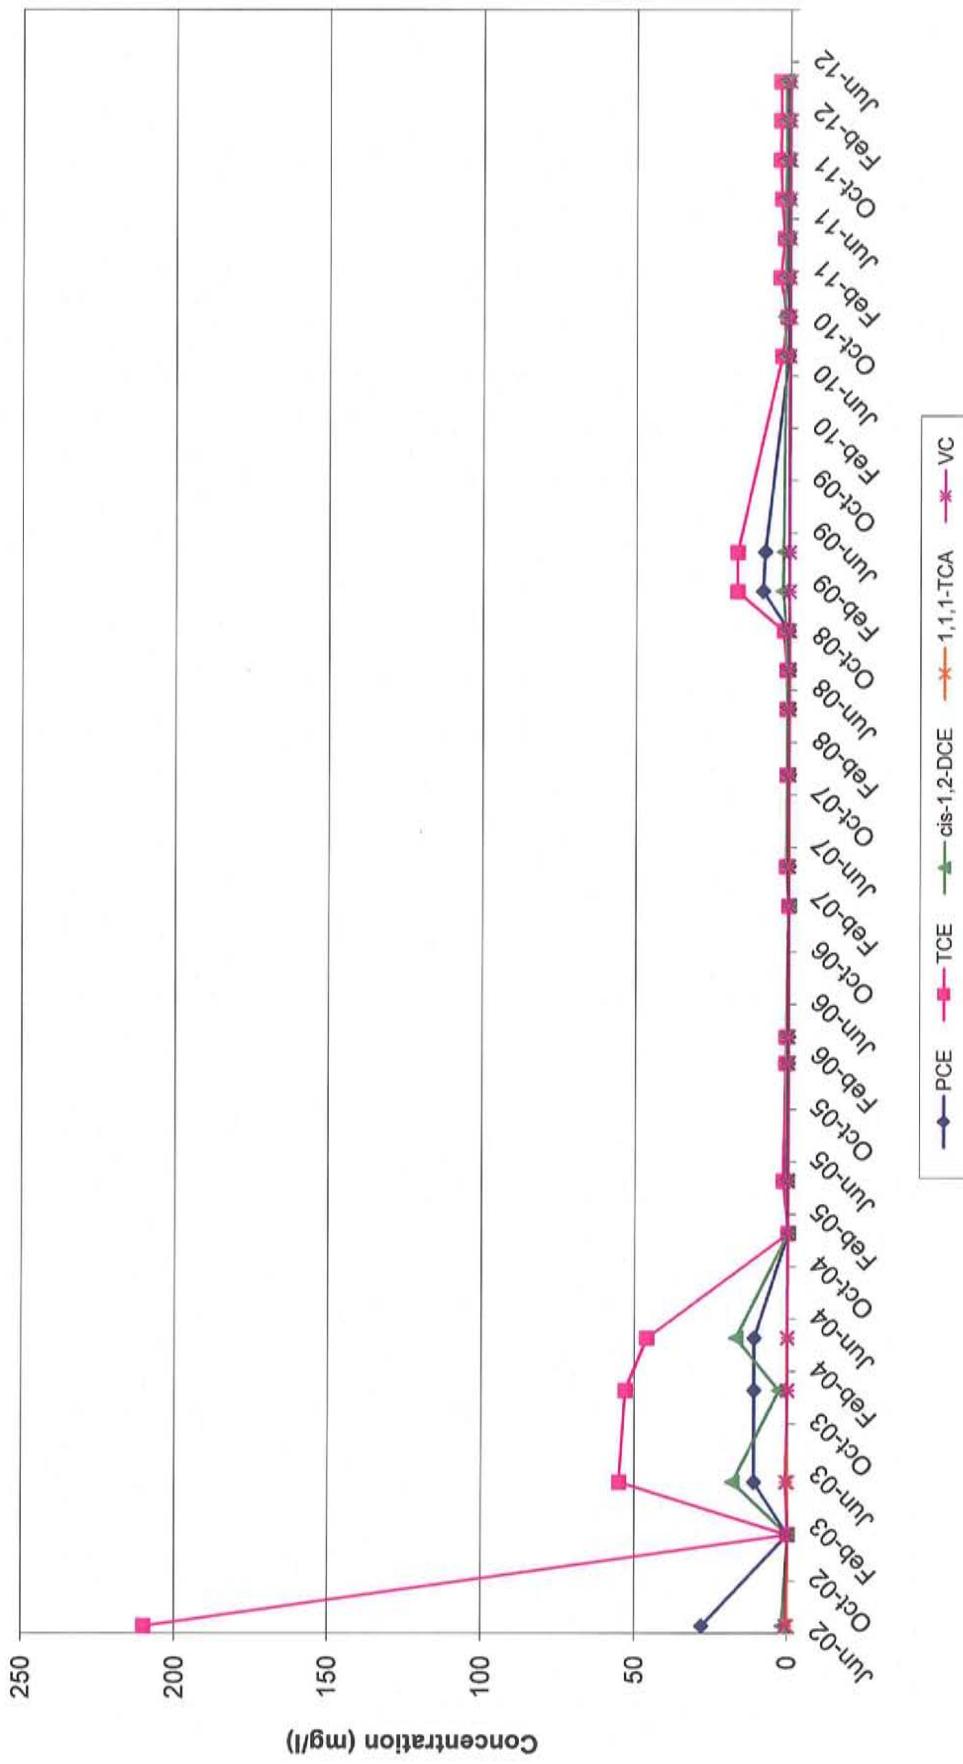

Notes: OB15-S is a shallow well northeast of Building 9.  
 Bio-injection was conducted in 2009, 2010, and 2012.  
 See end of appendix for additional notes.

VOC Trends in Well OB-19-S  
 Former Varian Facility Site  
 Beverly, Massachusetts

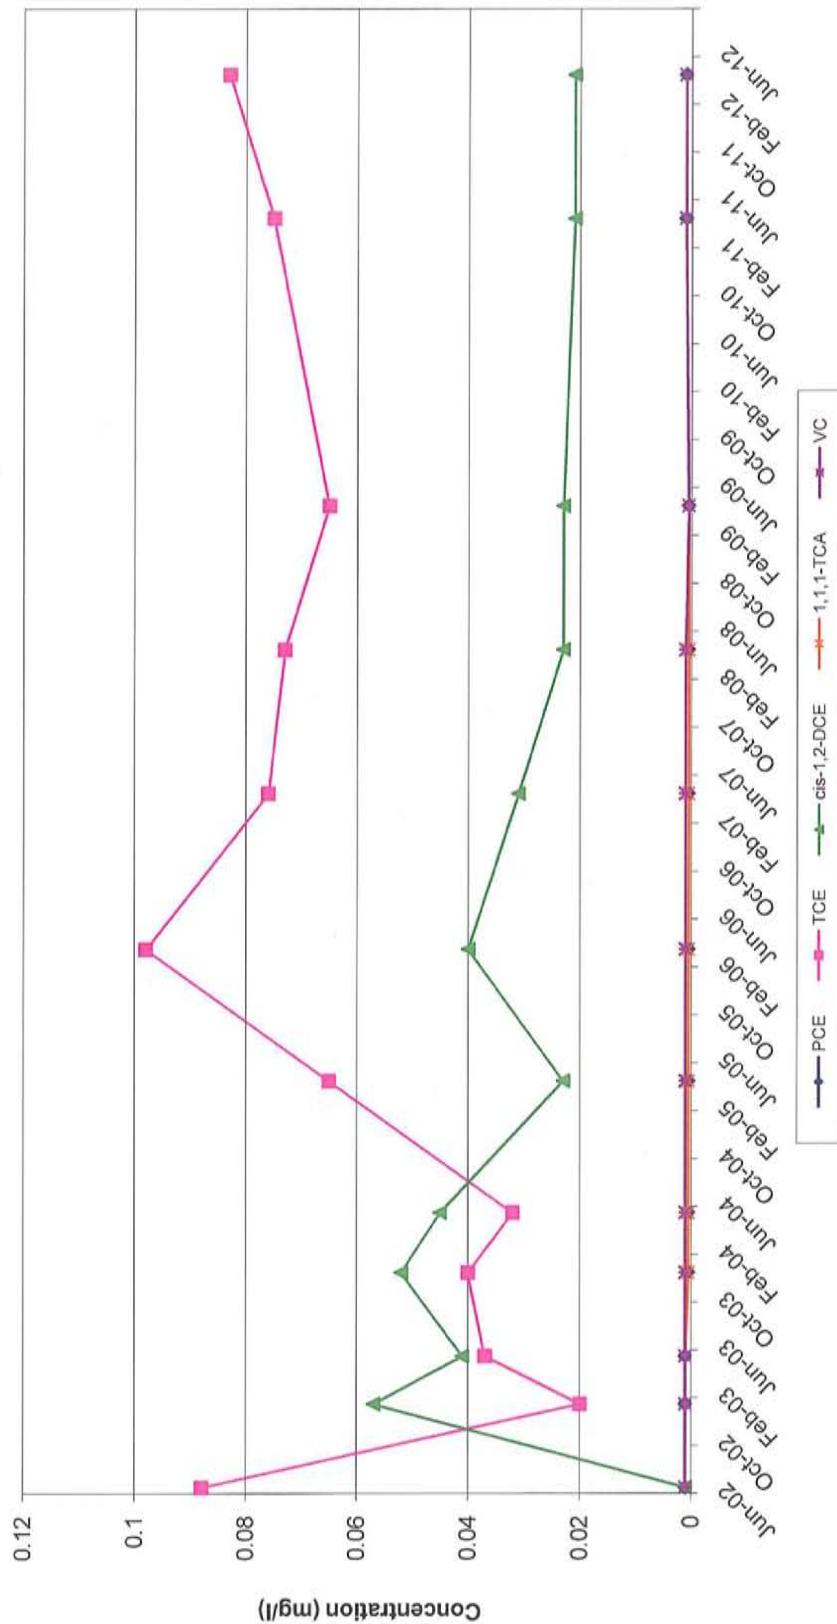

Note: OB-19-S is a shallow well west of Building 2.  
 See end of appendix for additional notes.

VOC Trends in Well OB-19-DO  
Former Varian Facility Site  
Beverly, Massachusetts

Note: OB-19-DO is a deep overburden well west of Building 2 where permanganate injection was conducted from 2002-2005.  
See end of appendix for additional notes.

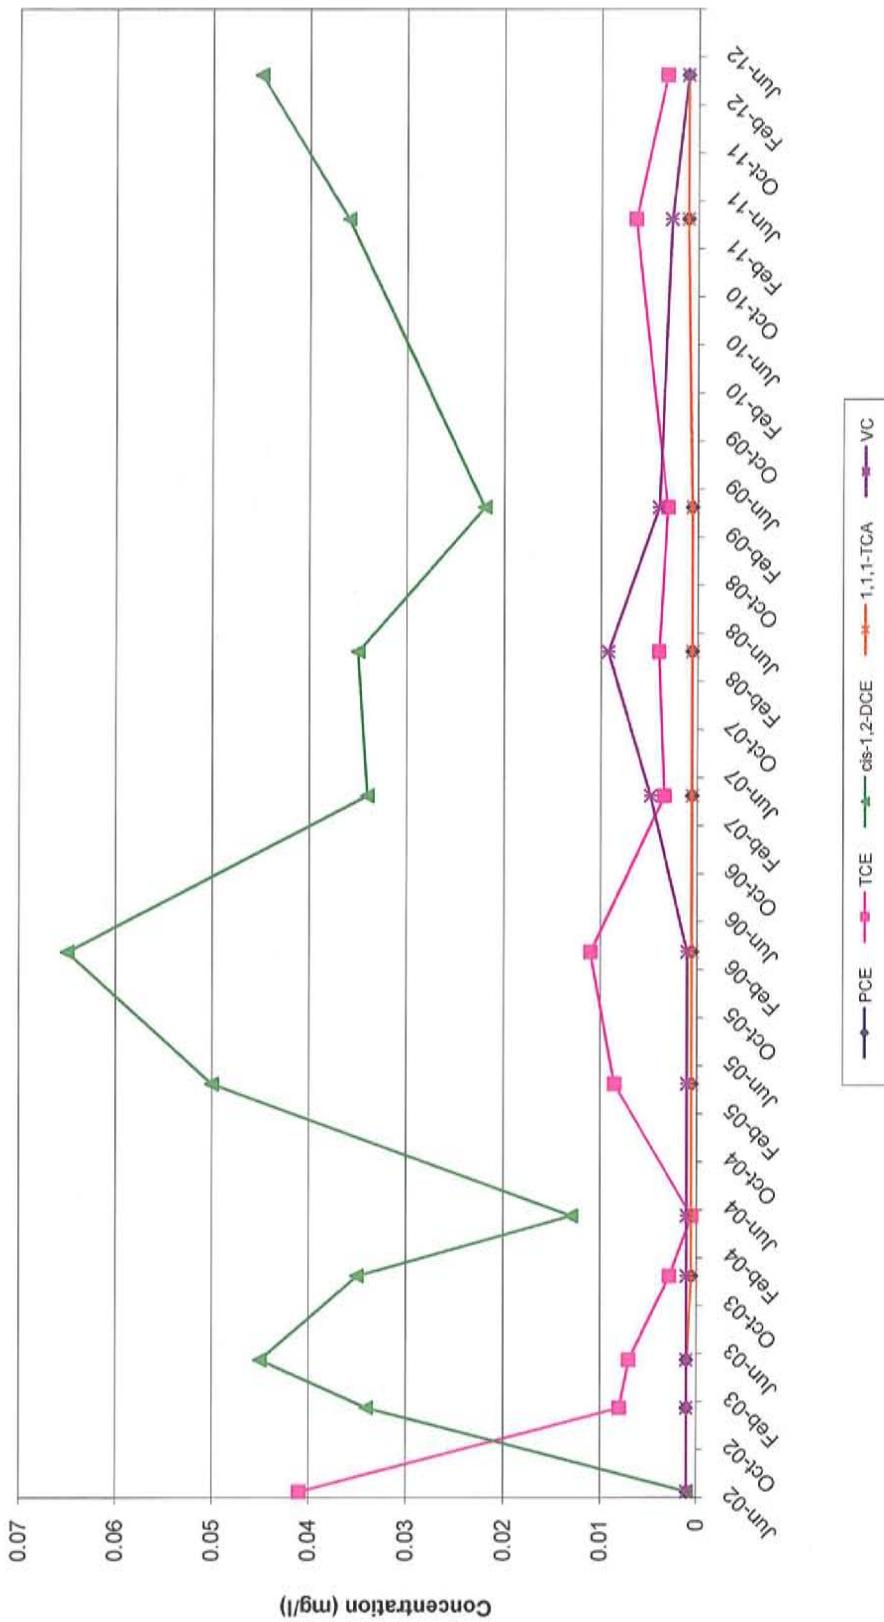

VOC Trends in Well OB-11-DO  
Former Varian Facility Site  
Beverly, Massachusetts

Notes: OB11-DO is a deep overburden well located north of Building 1.  
See end of appendix for additional notes.

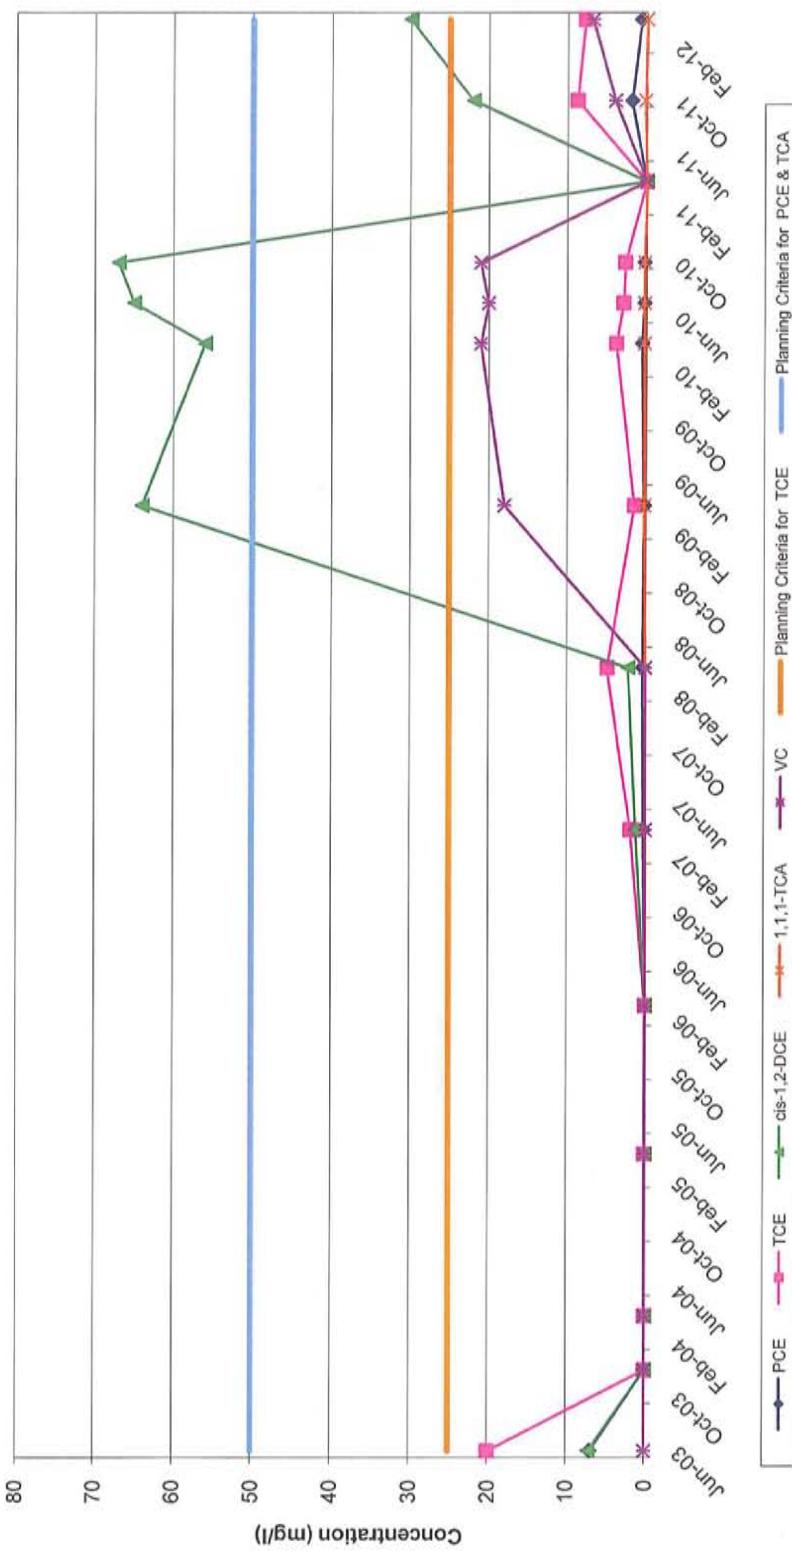

Shaw Environmental, Inc.  
H:\Varian\Draft\Reports\Status\ROS Status Oct 2012\Tables\Graphs VOC\_OB Aug2012.xls

VOC Trends in Well OB-11-BR  
Former Varian Facility Site  
Beverly, Massachusetts

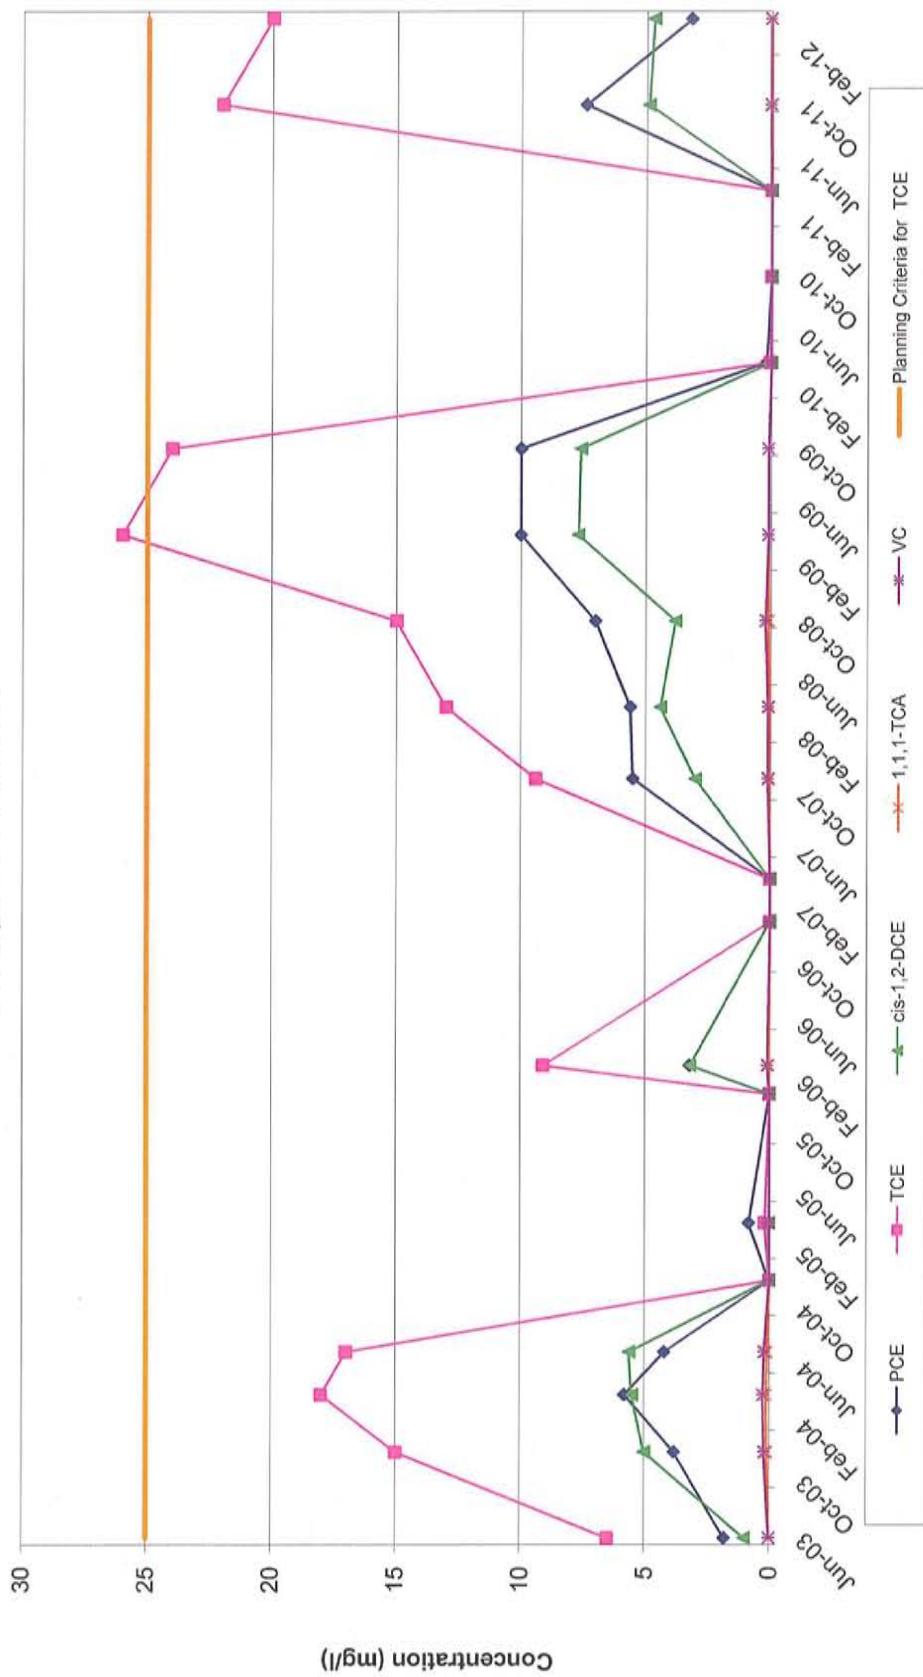

Notes: OB11-BR is a bedrock well located north of Building 3.  
See end of appendix for additional notes.

VOC Trends in Well OB-25-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

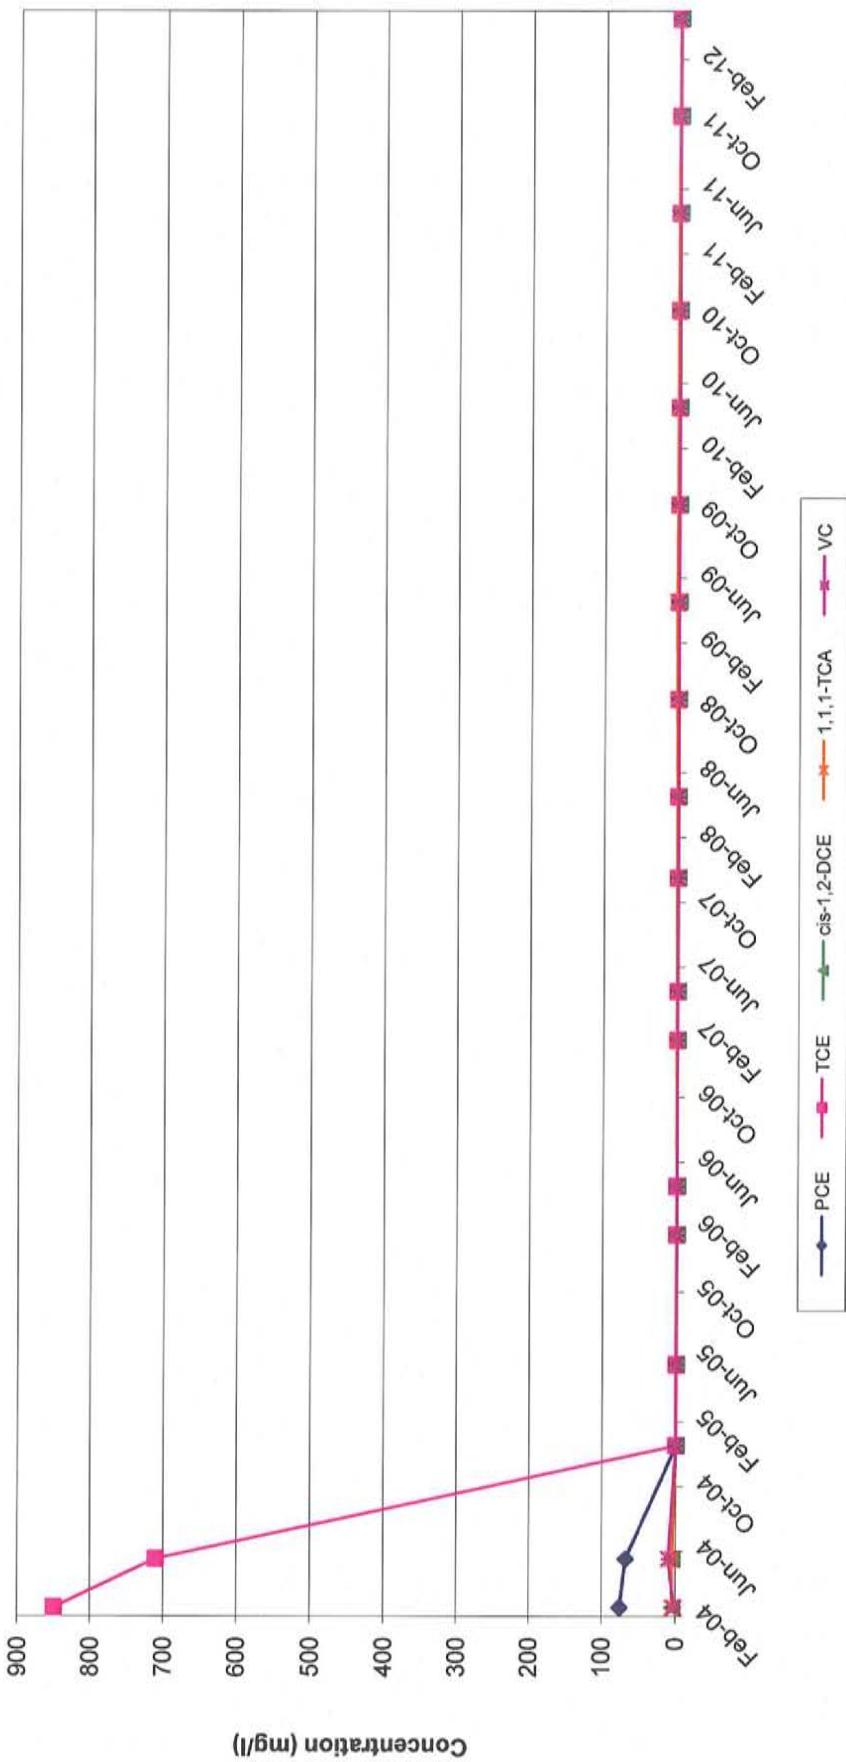

Notes: OB-25-BR is a bedrock well located just west of Building 1 where permanganate injection was conducted in 2003, 2010, and 2012. See end of appendix for additional notes.

VOC Trends in Well OB-27-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

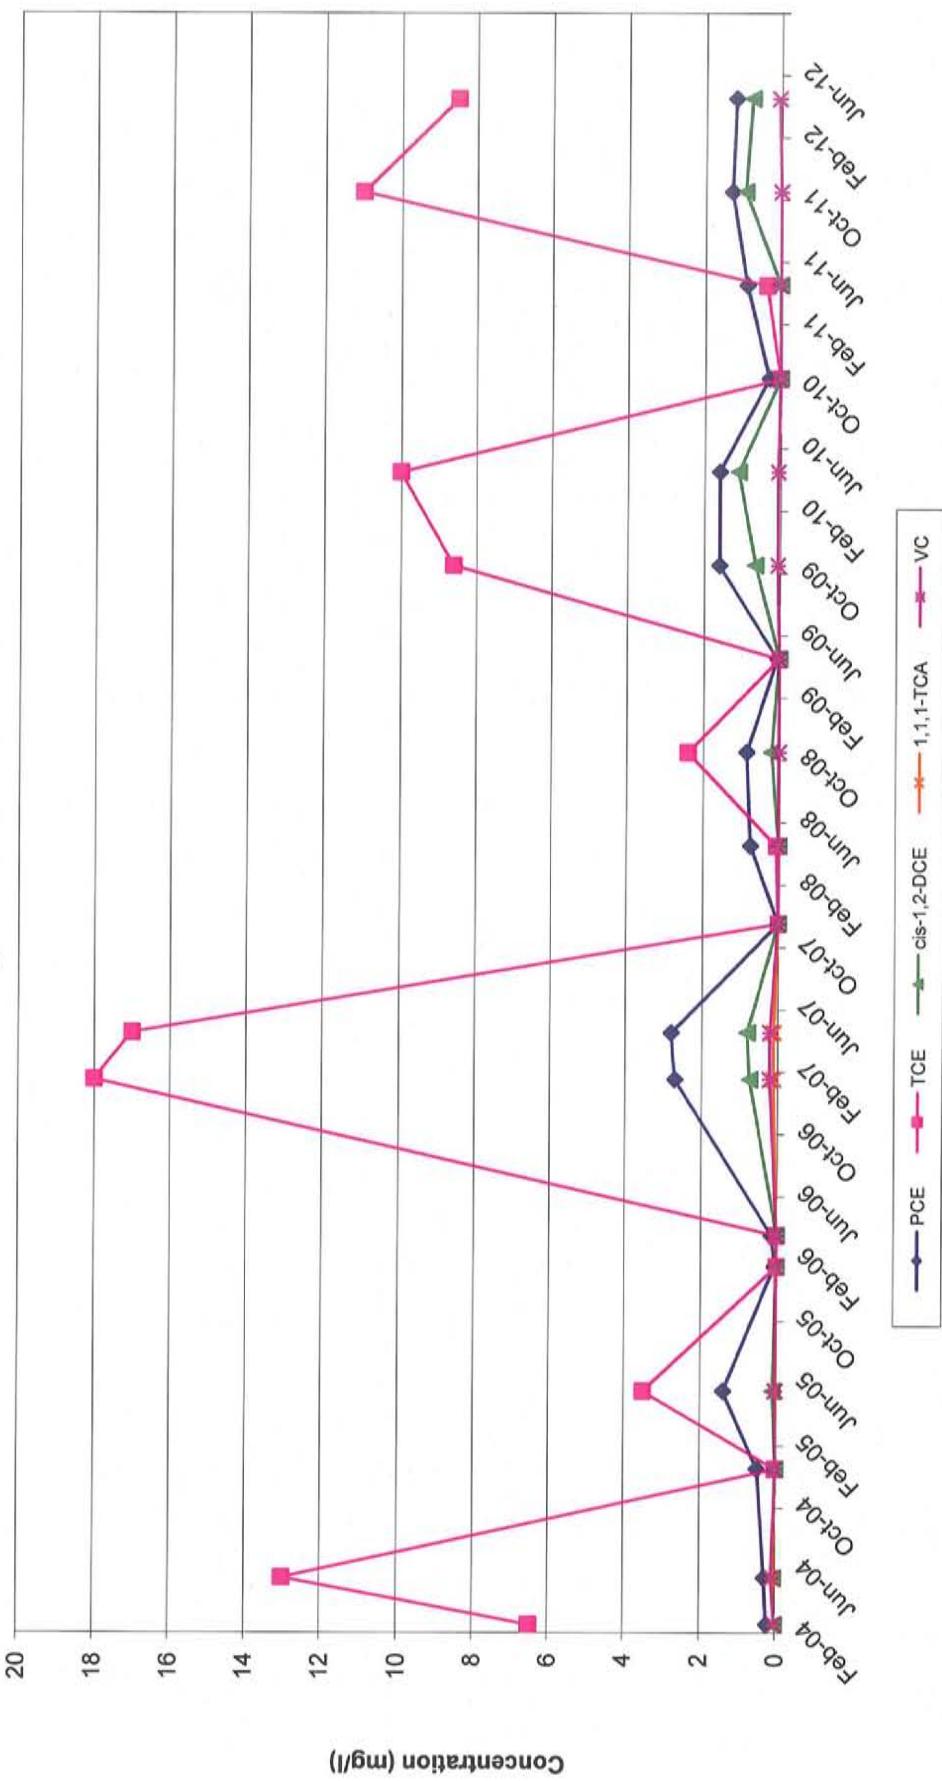

Notes: OB-27-BR is a bedrock well located west of Building 7.  
 Permanganate injection conducted in 2004-2007 and in 2010-2012.  
 See end of appendix for additional notes.

VOC Trends in Well OB-32-DO  
Former Varian Facility Site  
Beverly, Massachusetts

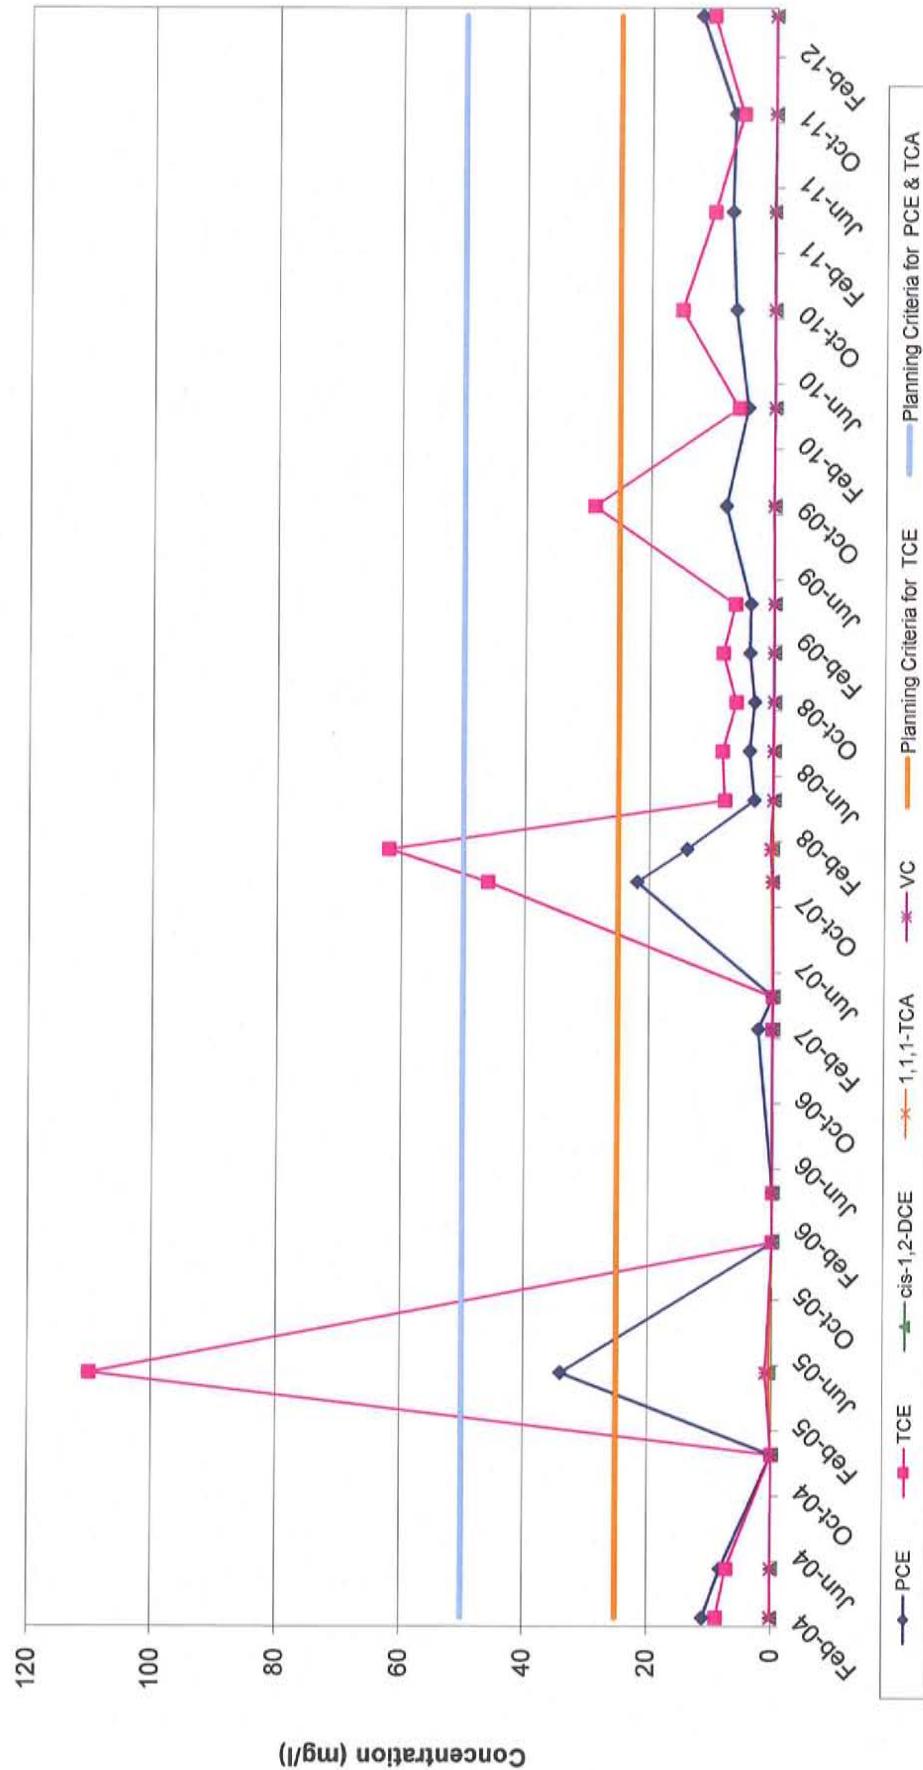

Note: OB-32-DO is a deep overburden well north of Building 3 where permanganate injection was conducted in 2004.  
See end of appendix for additional notes.

VOC Trends in Well OB-34-DO  
Former Varian Facility Site  
Beverly, Massachusetts

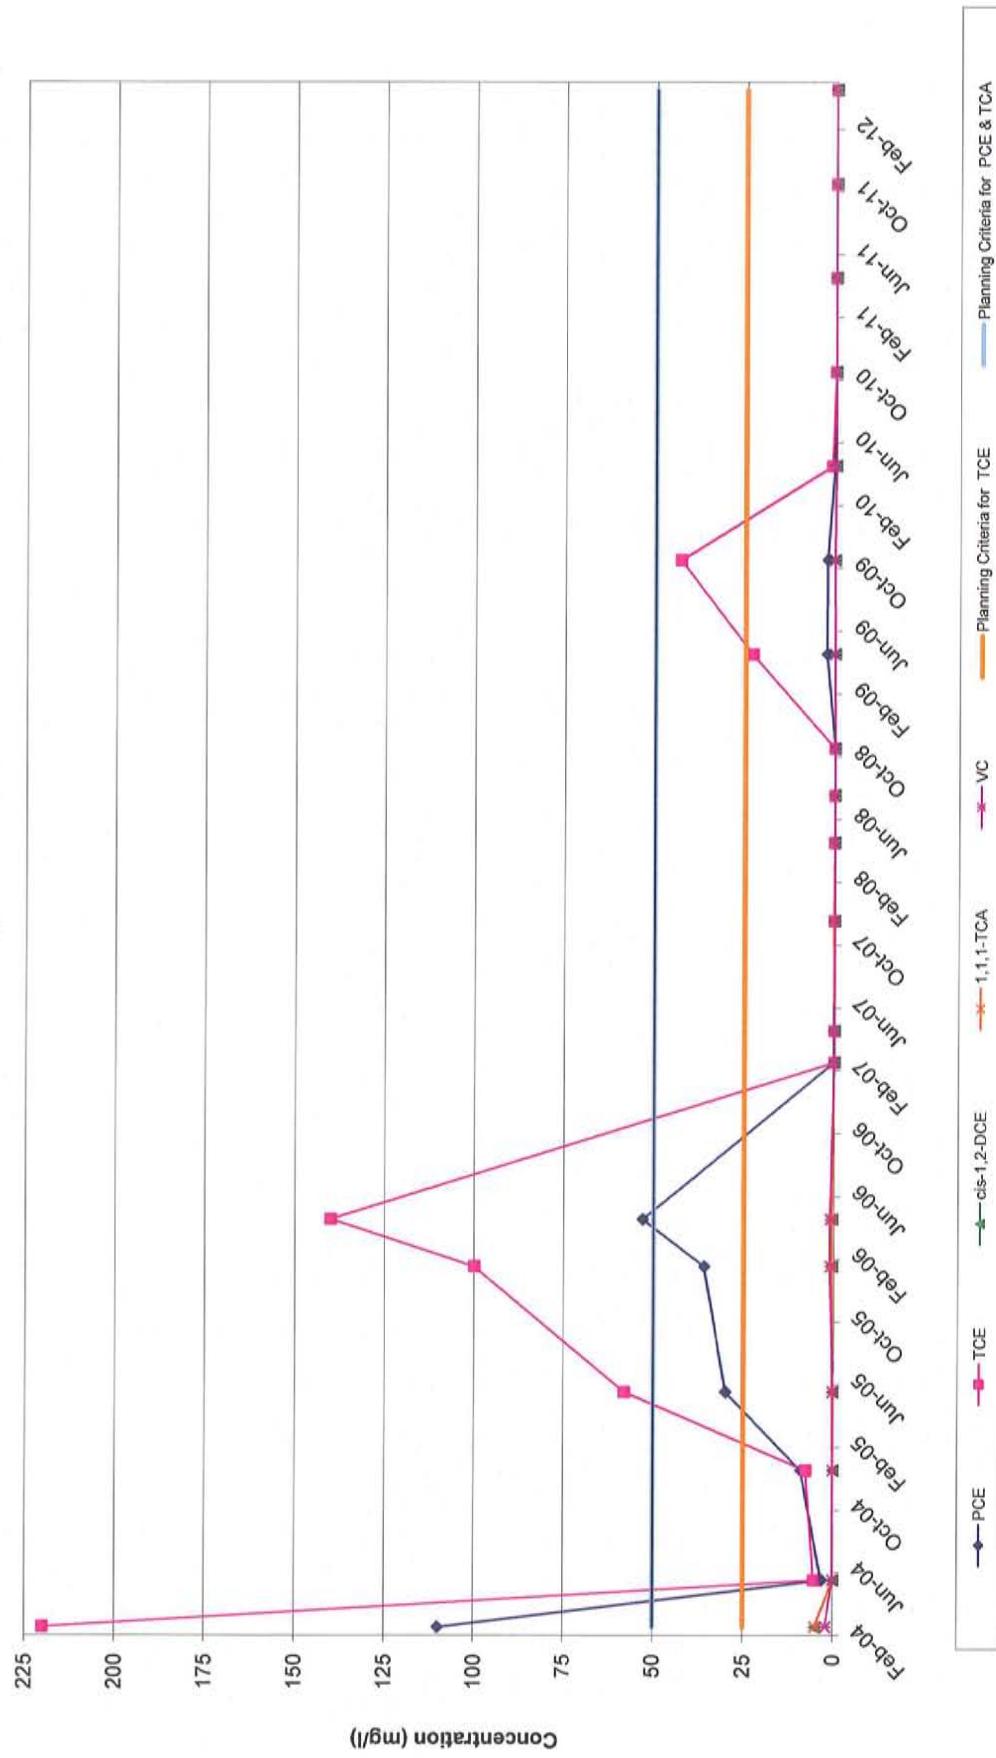

Notes: OB34-DO is a deep overburden well north of Building 3.  
Permanganate injection was conducted in 2004, 2005, 2007 and 2009.  
See end of appendix for additional notes.

**VOC Trends in Well OB-36-DO  
Former Varian Facility Site  
Beverly, Massachusetts**

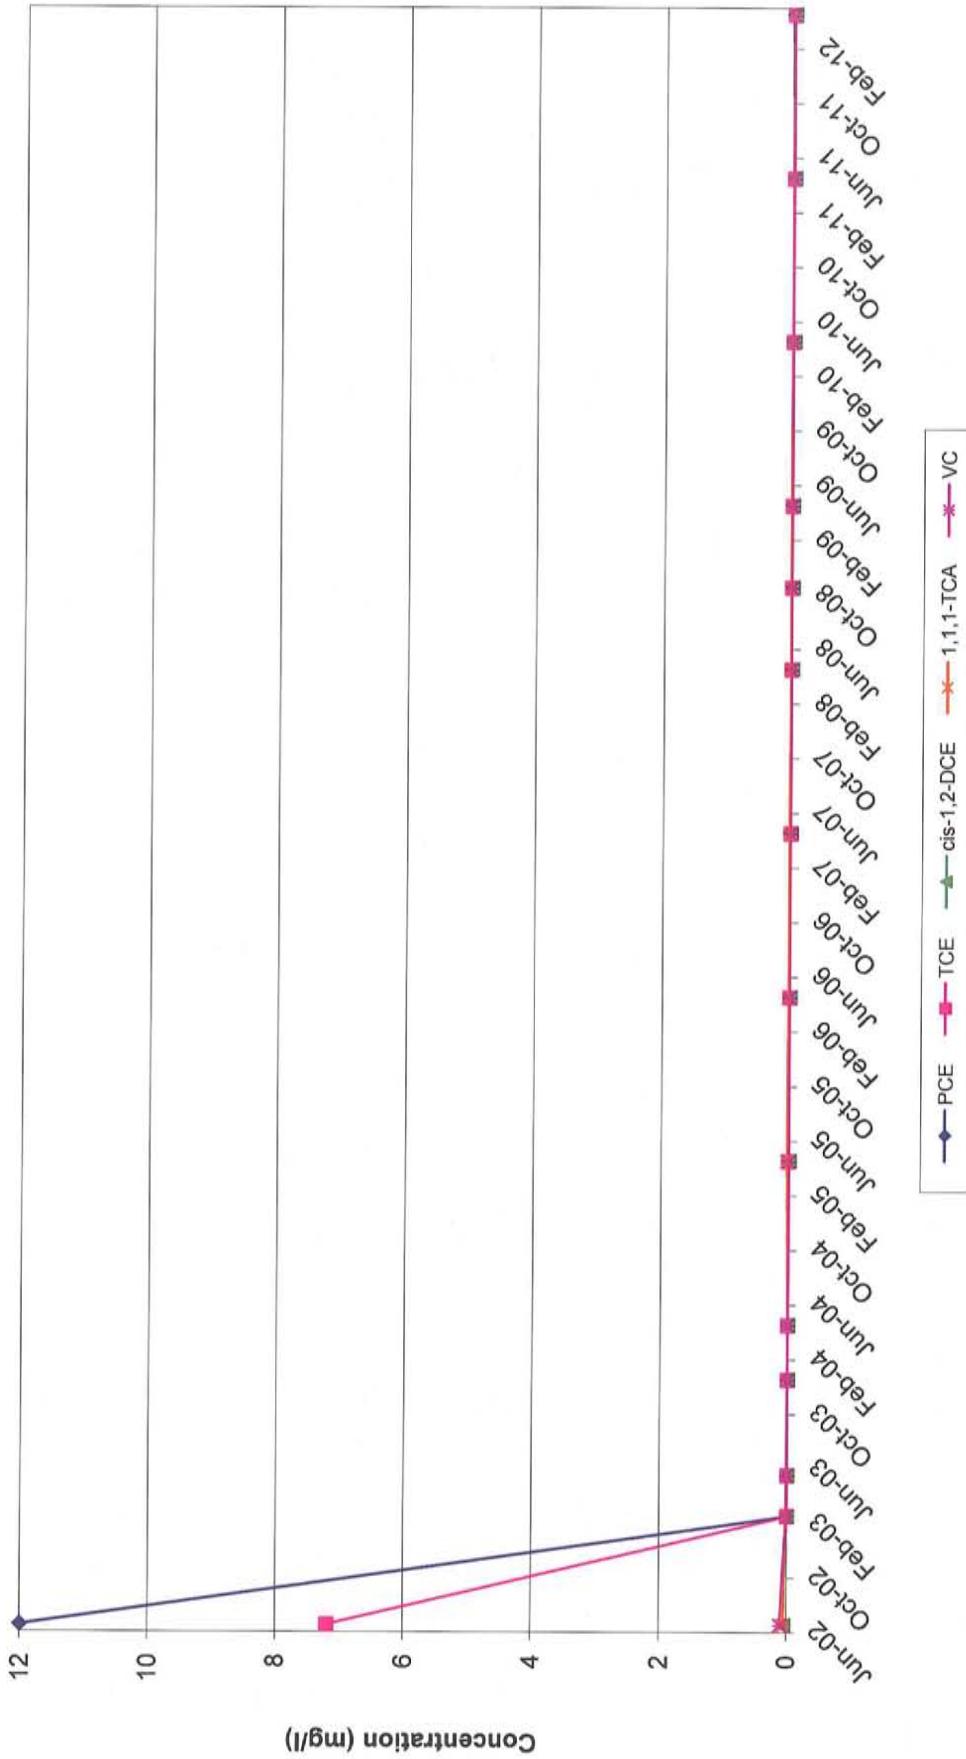

Note: OB-36-DO is a deep overburden well inside the Building 6 loading dock where permanganate injection was conducted in 2004-2005.  
See end of appendix for additional notes.

VOC Trends in Well OB-37-DO  
Former Varian Facility Site  
Beverly, Massachusetts

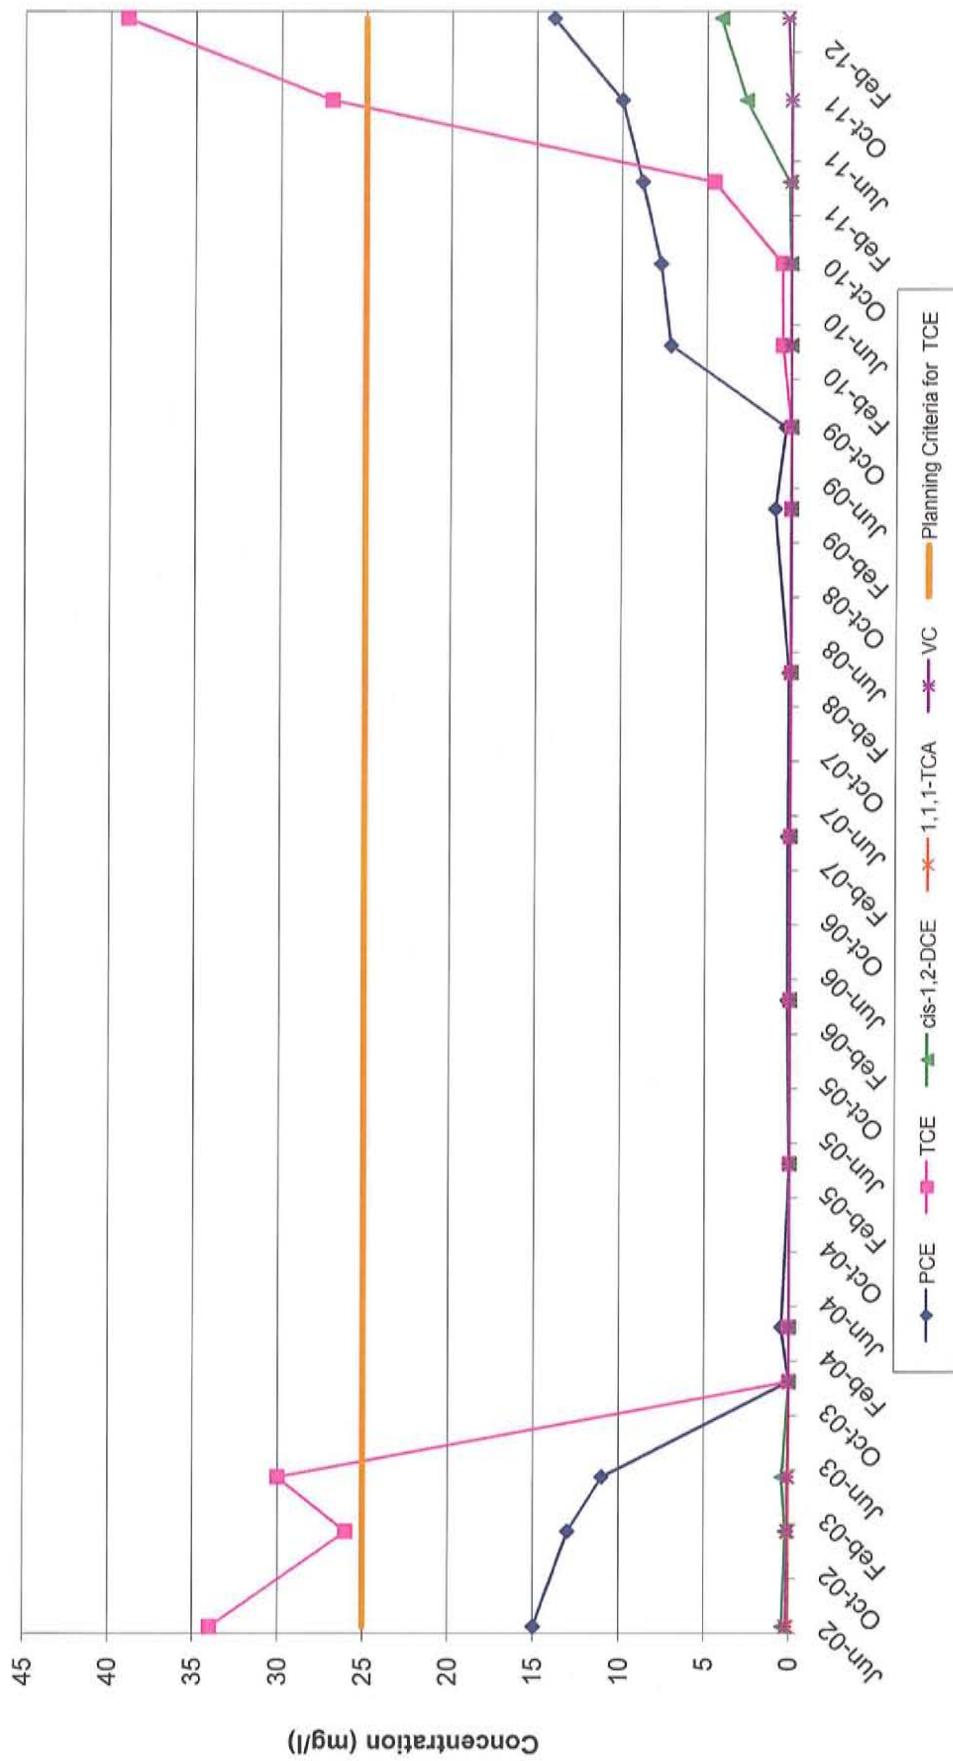

Notes: OB37-DO is a deep overburden well inside Building 6.  
Permanganate injection conducted in 2006, 2007 and 2010-2011.  
See end of appendix for additional notes.

**VOC Trends in Well AP-12-S**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

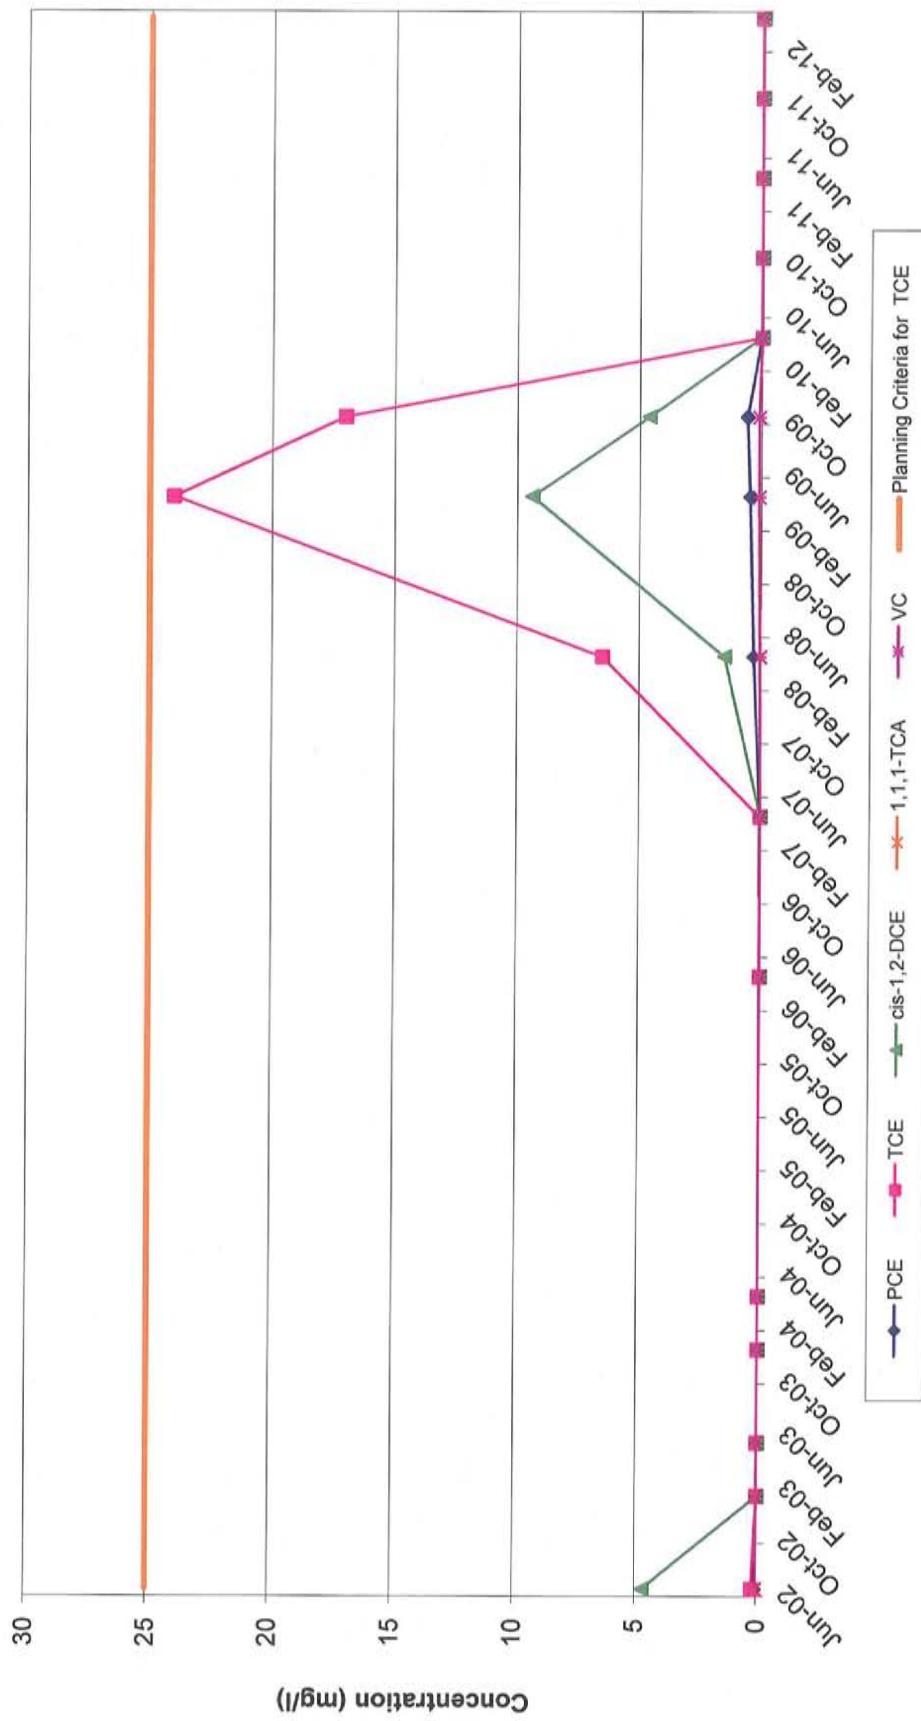

Notes: AP-12-S is a shallow well adjacent to Building 6 where permanganate injection has been completed in 2002 and 2003. See end of appendix for additional notes.

VOC Trends in Well AP-12-DO  
Former Varian Facility Site  
Beverly, Massachusetts

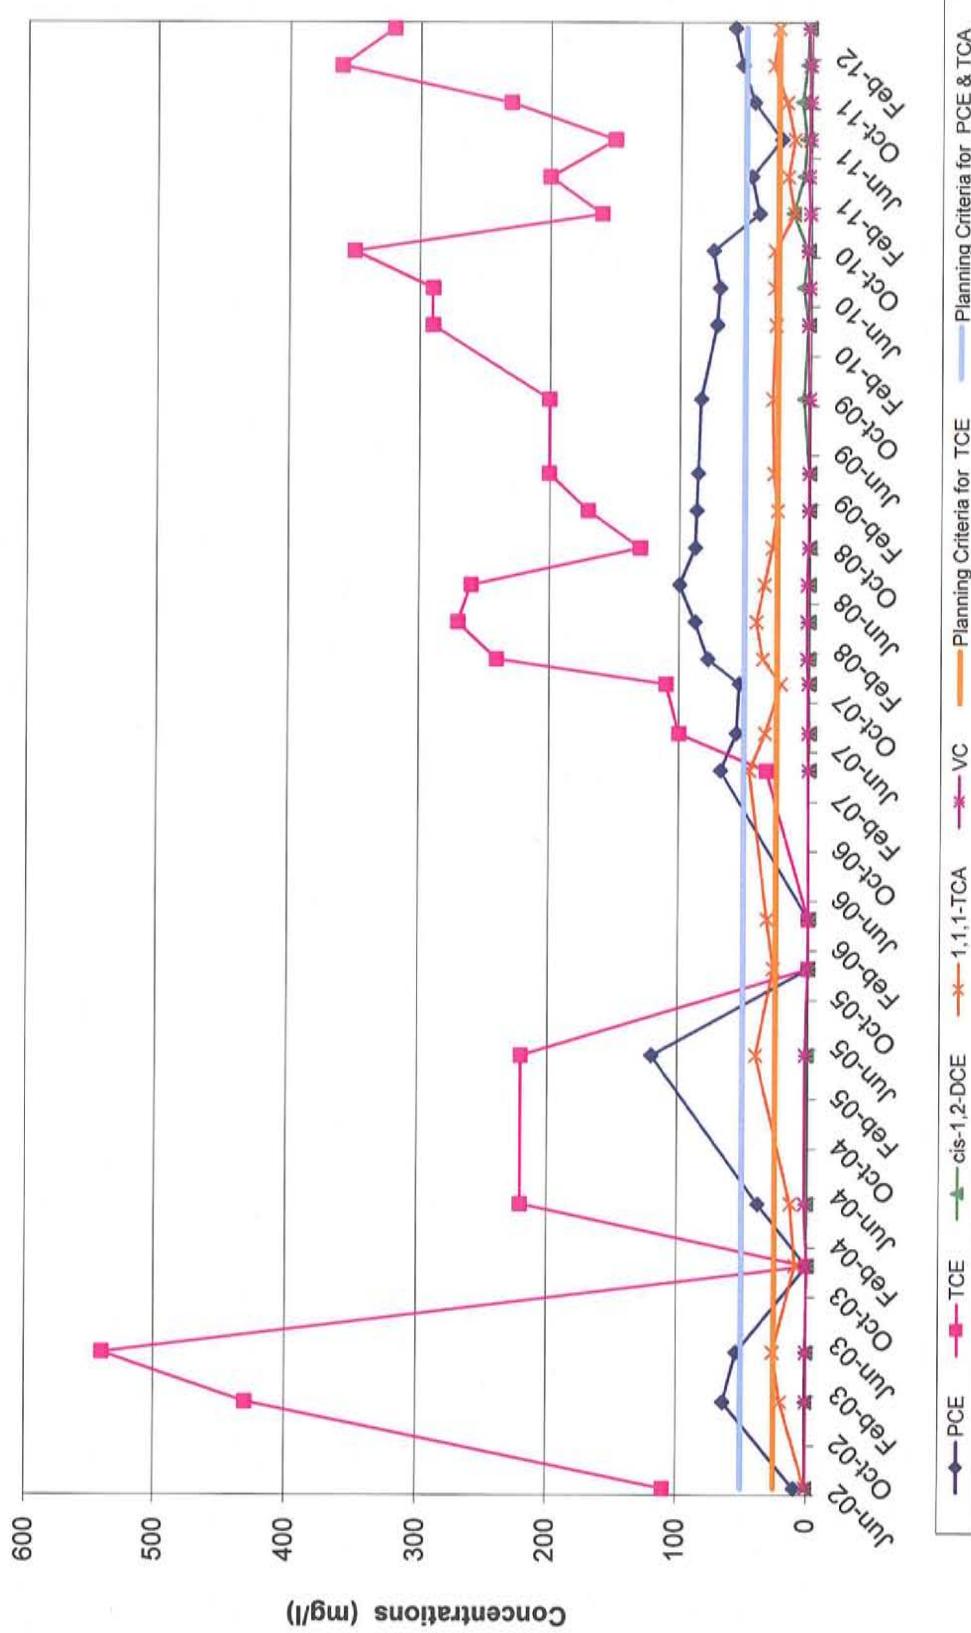

Notes: AP-12-DO is a deep overburden well adjacent to Building 6 where permanganate injection was conducted in 2002, 2003, 2004, and 2012.  
See end of appendix for additional notes.

VOC Trends in Well AP-12-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

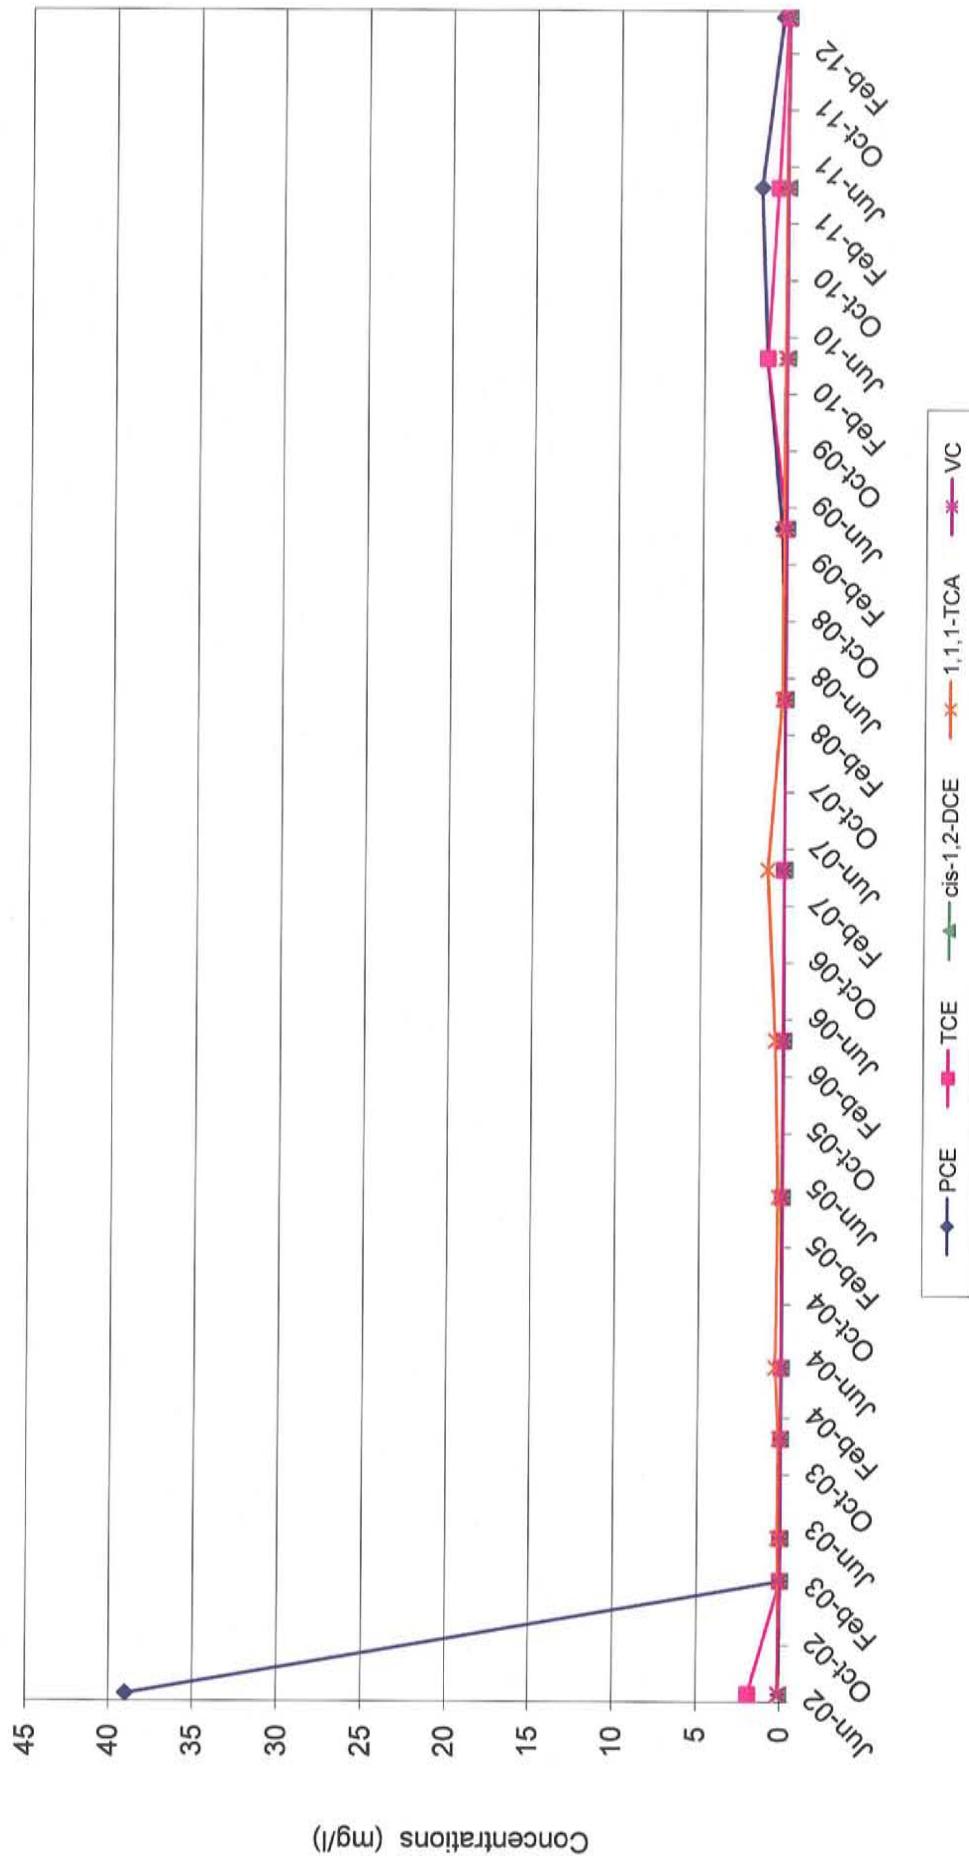

Notes: AP-12-DO is a deep overburden well adjacent to Building 6.  
 Permanganate injection conducted in 2002, 2003, 2004 and 2010.  
 See end of appendix for additional notes.

**VOC Trends in Well AP-13-DO**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

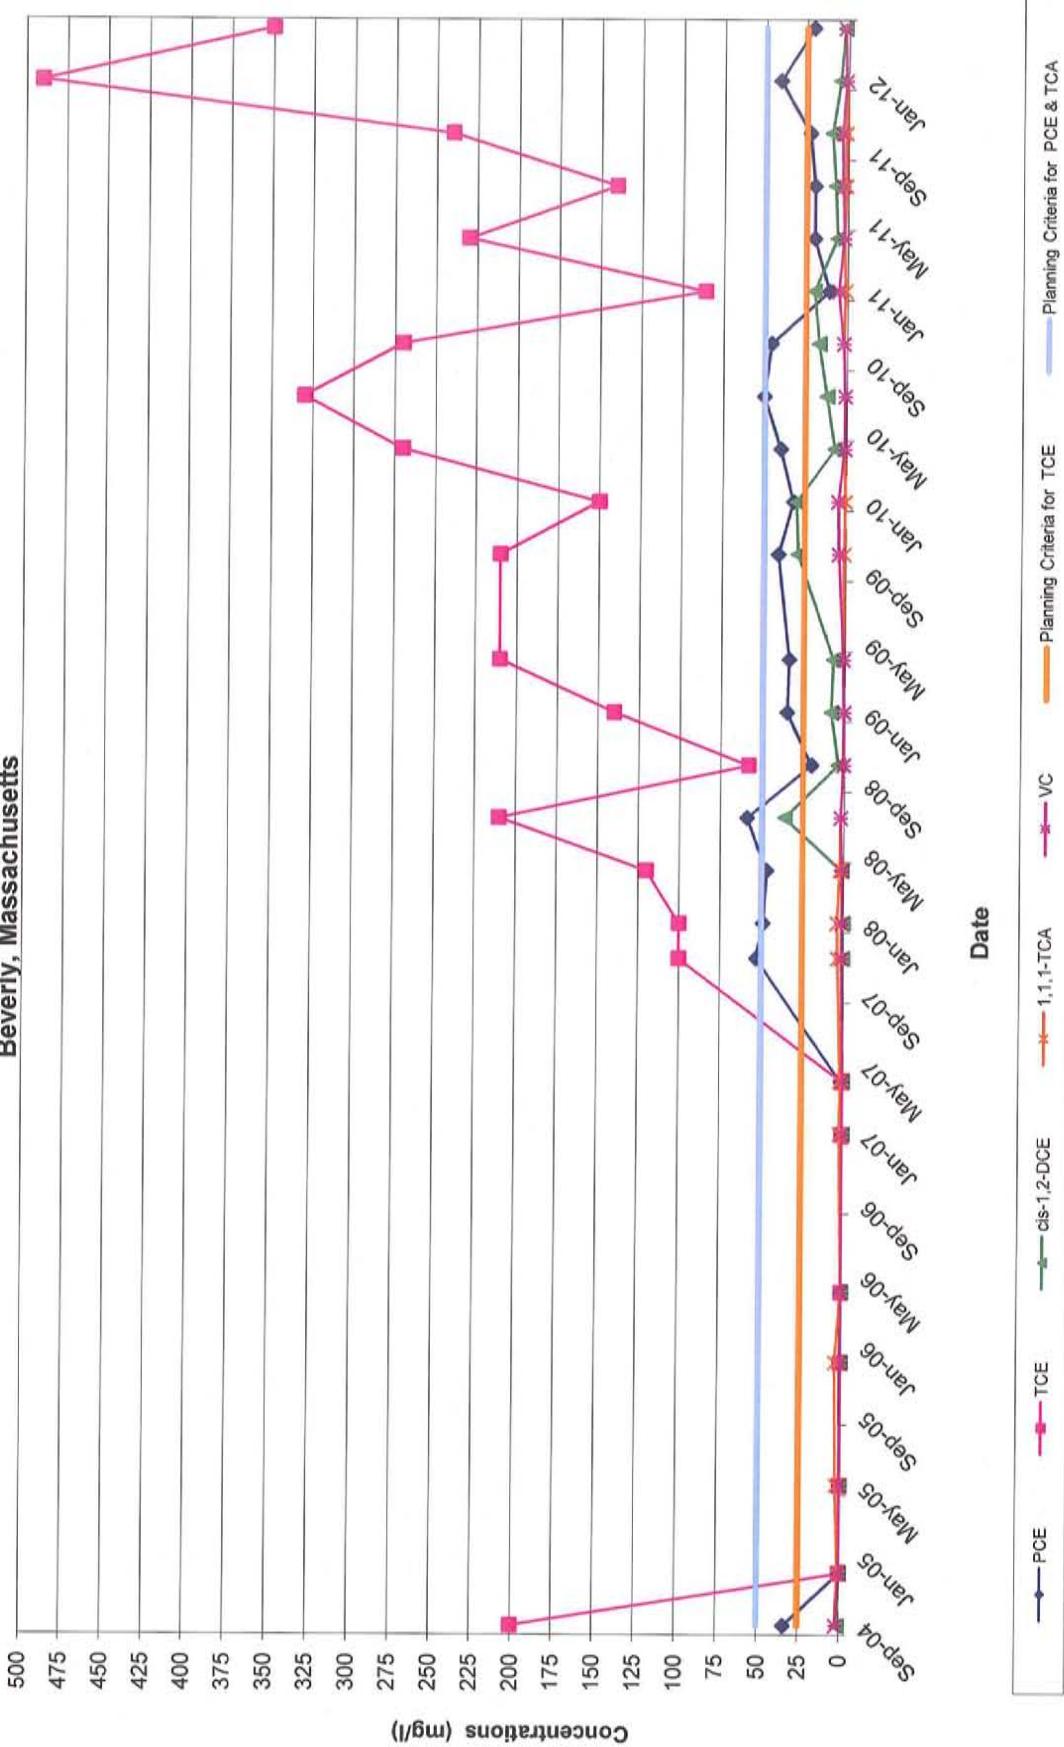

Notes: AP-13-DO is a deep overburden well adjacent to Building 3 where permanganate injection was conducted in 2002-2005 and bio-injection occurred in 2007-2008 and 2010-2011. See end of appendix for additional notes.

VOC Trends in Well AP-14S  
Former Varian Facility Site  
Beverly, Massachusetts

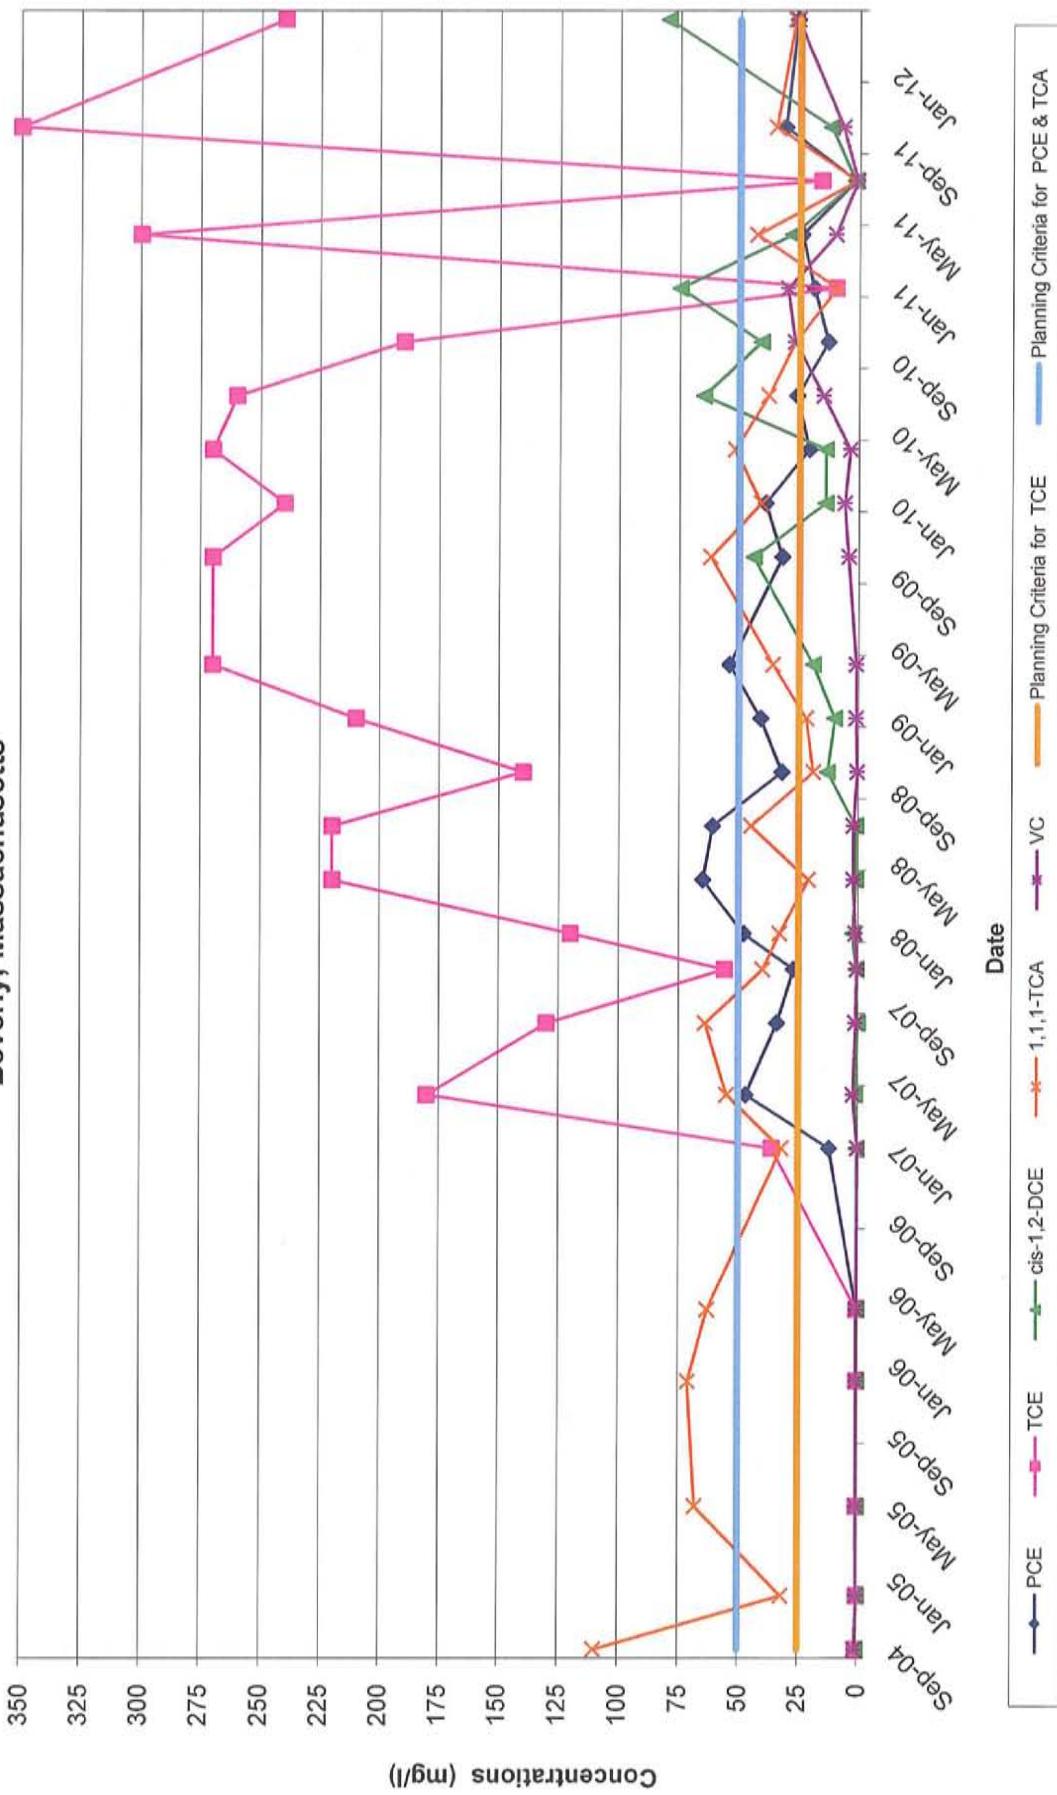

Notes: AP-14S is a shallow overburden well adjacent to (north of) Building 3 where permanganate injection was conducted in 2002.  
See end of appendix for additional notes.

VOC Trends in Well AP-23-DO  
Former Varian Facility Site  
Beverly, Massachusetts

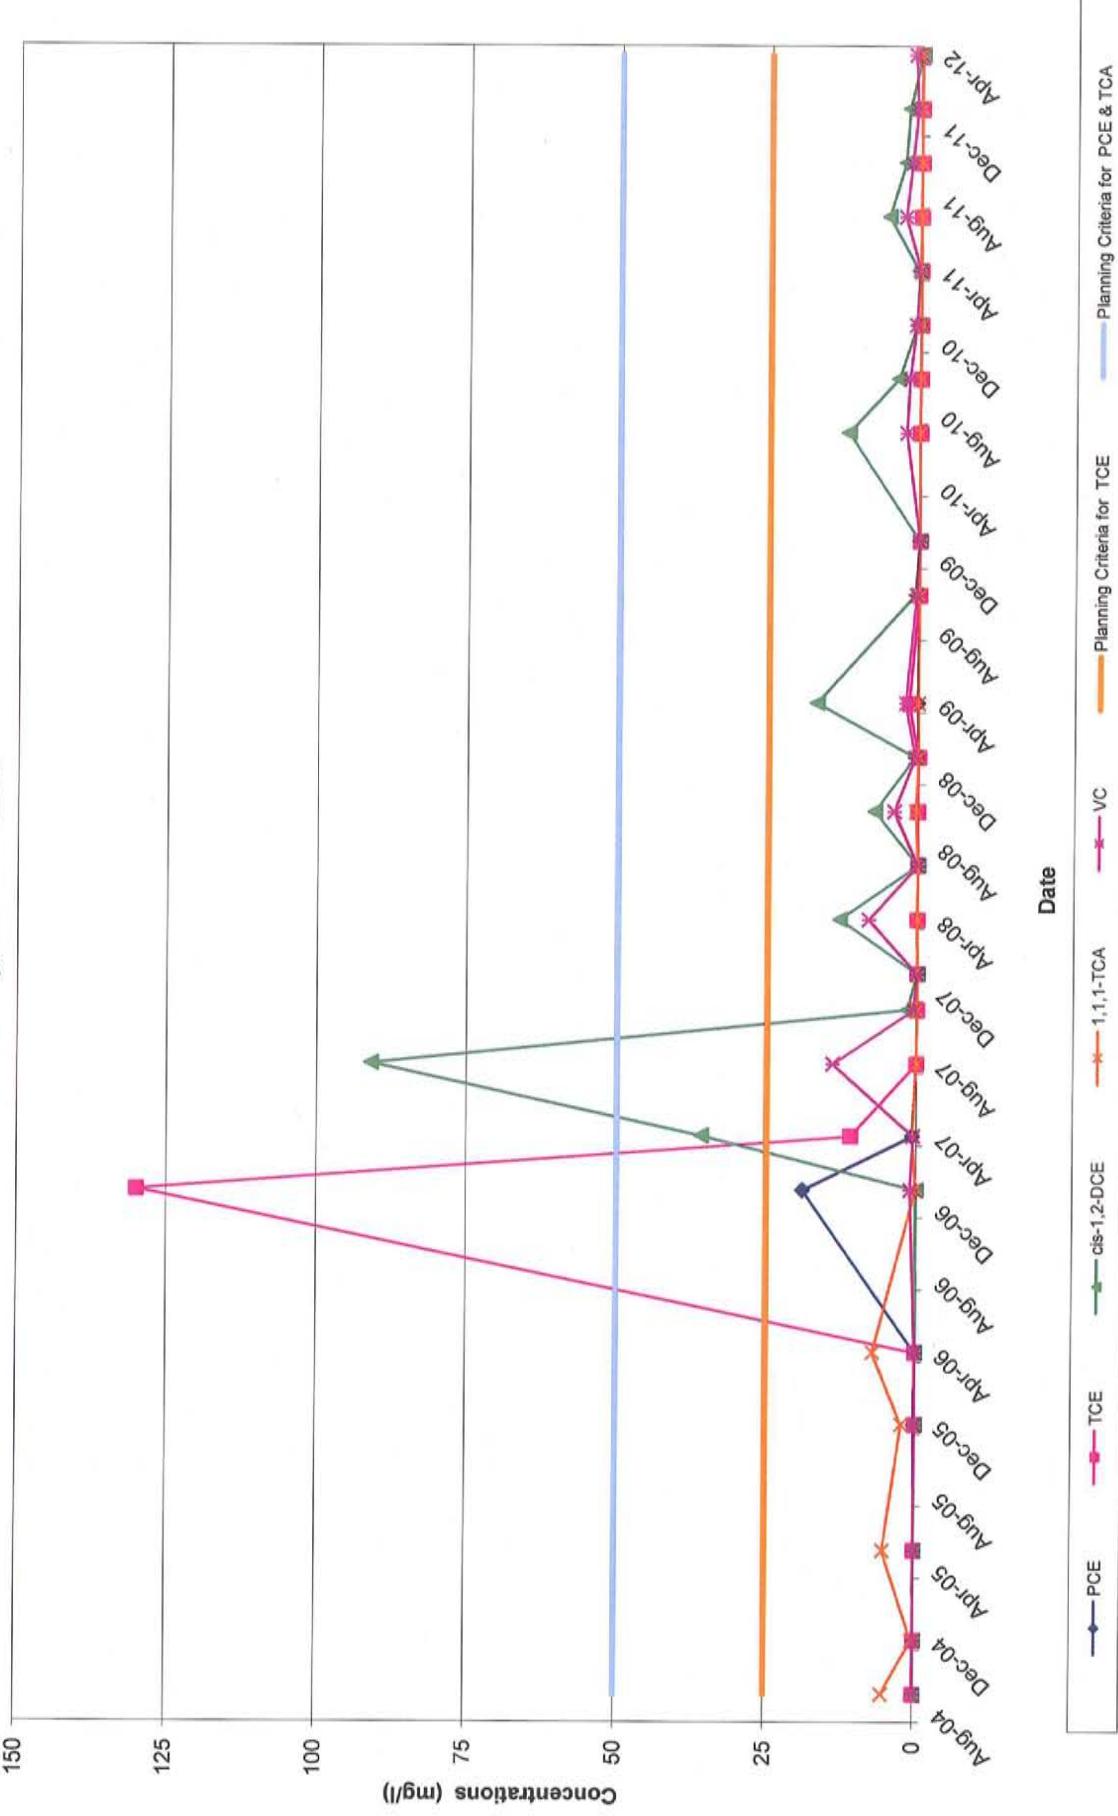

Notes: AP23-DO is a deep overburden well northeast of Building 3.  
Permanganate injection completed in 2003-2004 and bio-injection  
completed in 2007-2008 and 2010-2011.  
See end of appendix for additional notes.

VOC Trends in Well AP-24-DO  
Former Varian Facility Site  
Beverly, Massachusetts

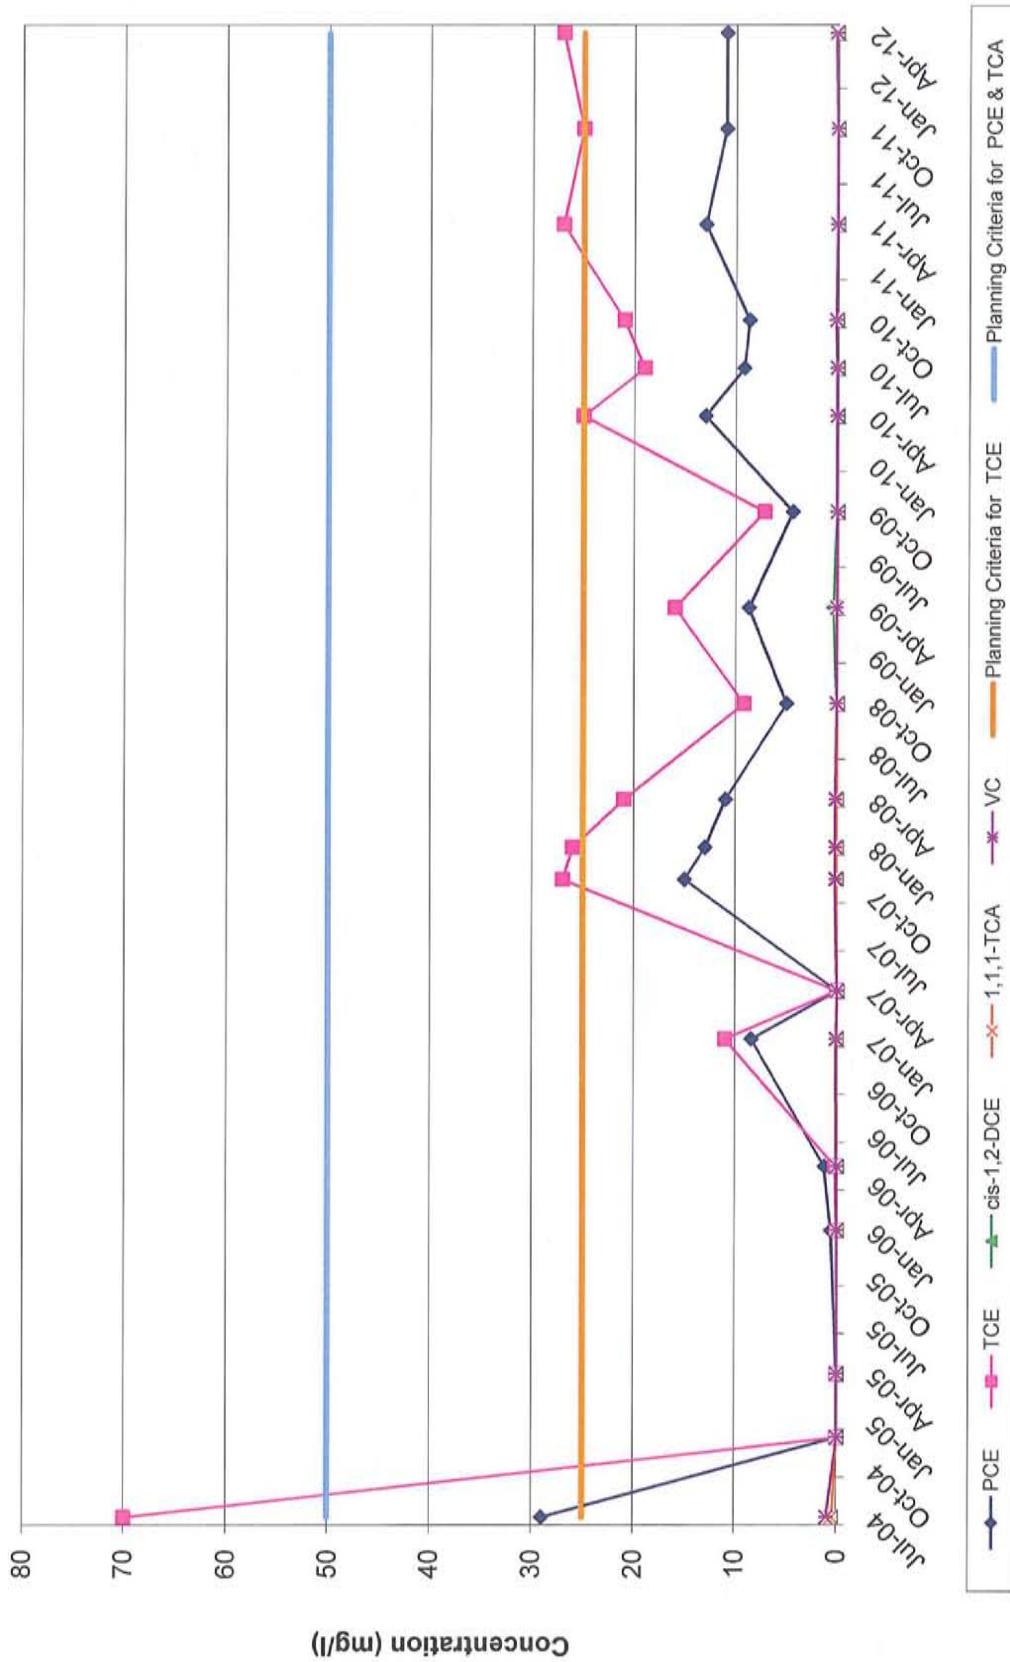

Notes: AP24-DO is a deep overburden well northeast of Building 3. Permagante injection was conducted in 2003-2004 and bio-injection in 2006-2008 and 2010-2011. See end of appendix for additional notes.

VOC Trends in Well AP-25-DO  
Former Varian Facility Site  
Beverly, Massachusetts

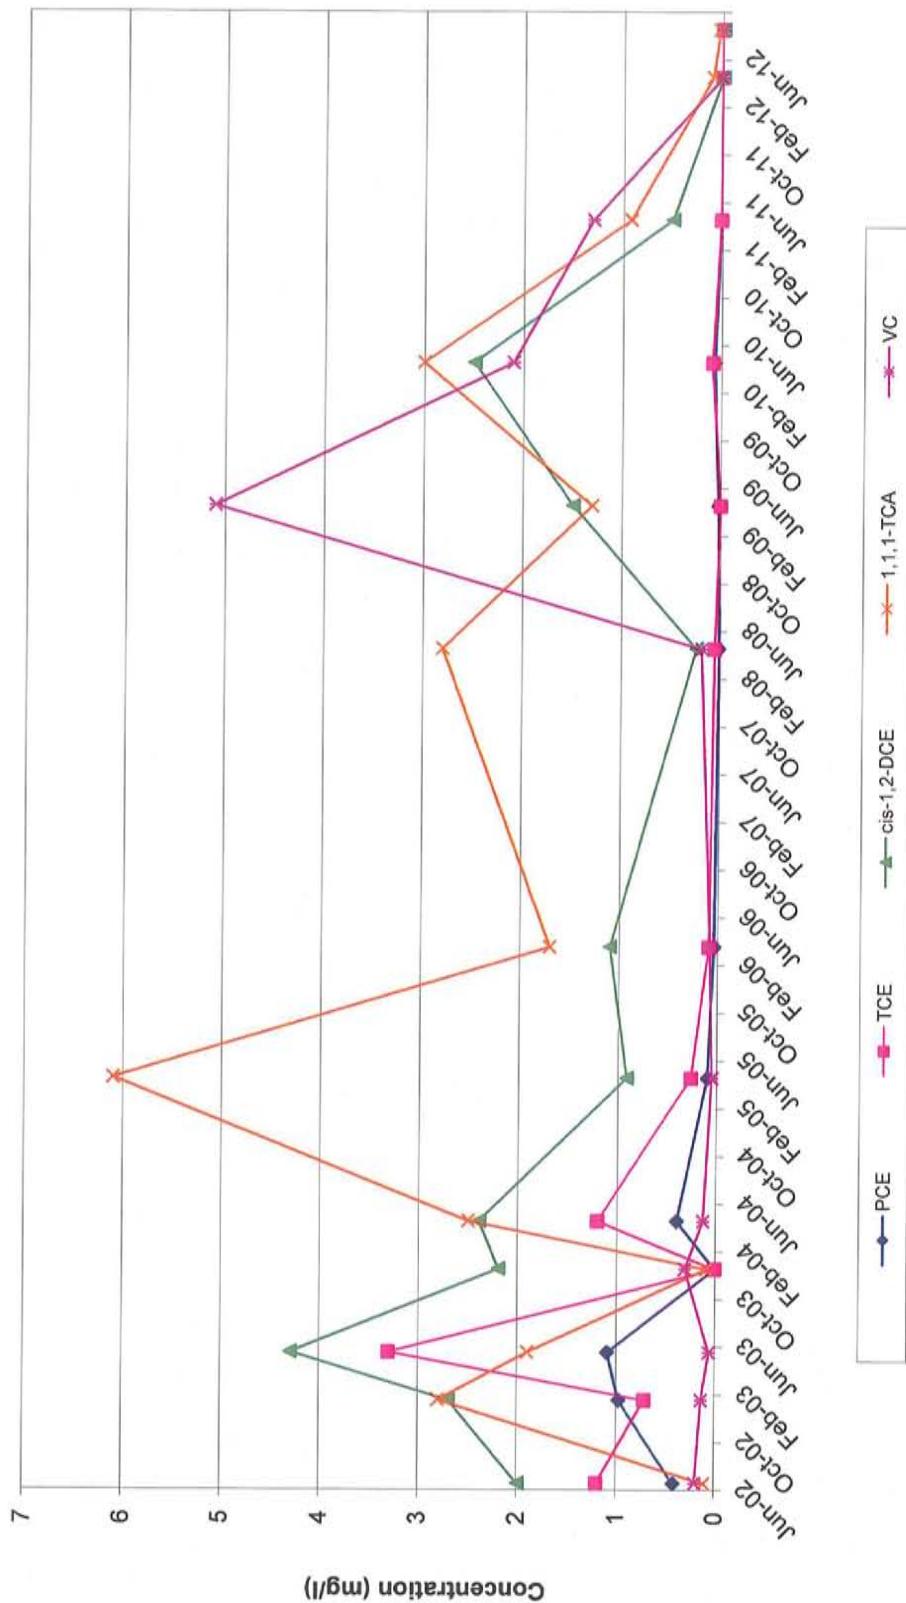

Notes: AP25-DO is a deep overburden well east of Building 3 where permanganate injection was conducted in 2004 and bio-injection in 2007. See end of appendix for additional notes.

VOC Trends in Well AP-26-DO  
Former Varian Facility Site  
Beverly, Massachusetts

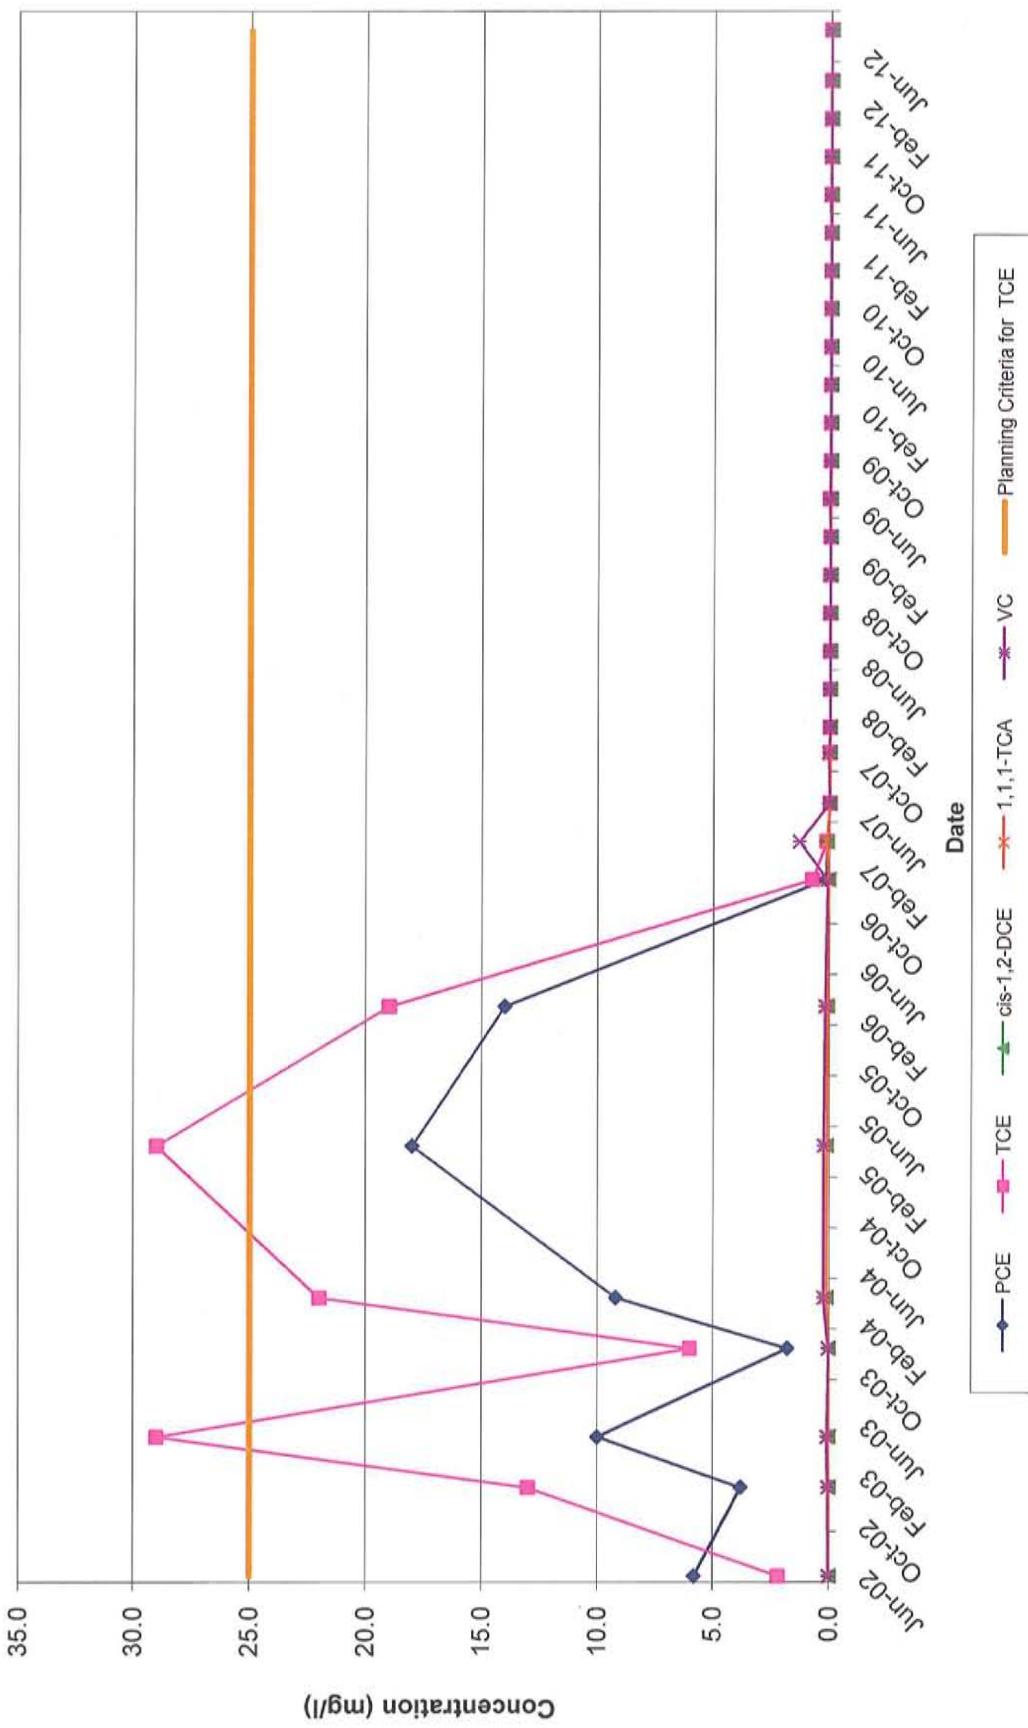

Notes: AP-26-DO is a deep overburden well just west of Building 1 where permanganate injection was conducted in 2004 and 2012.  
See end of appendix for additional notes.

VOC Trends in Well MW-008  
 Former Varian Facility Site  
 Beverly, Massachusetts

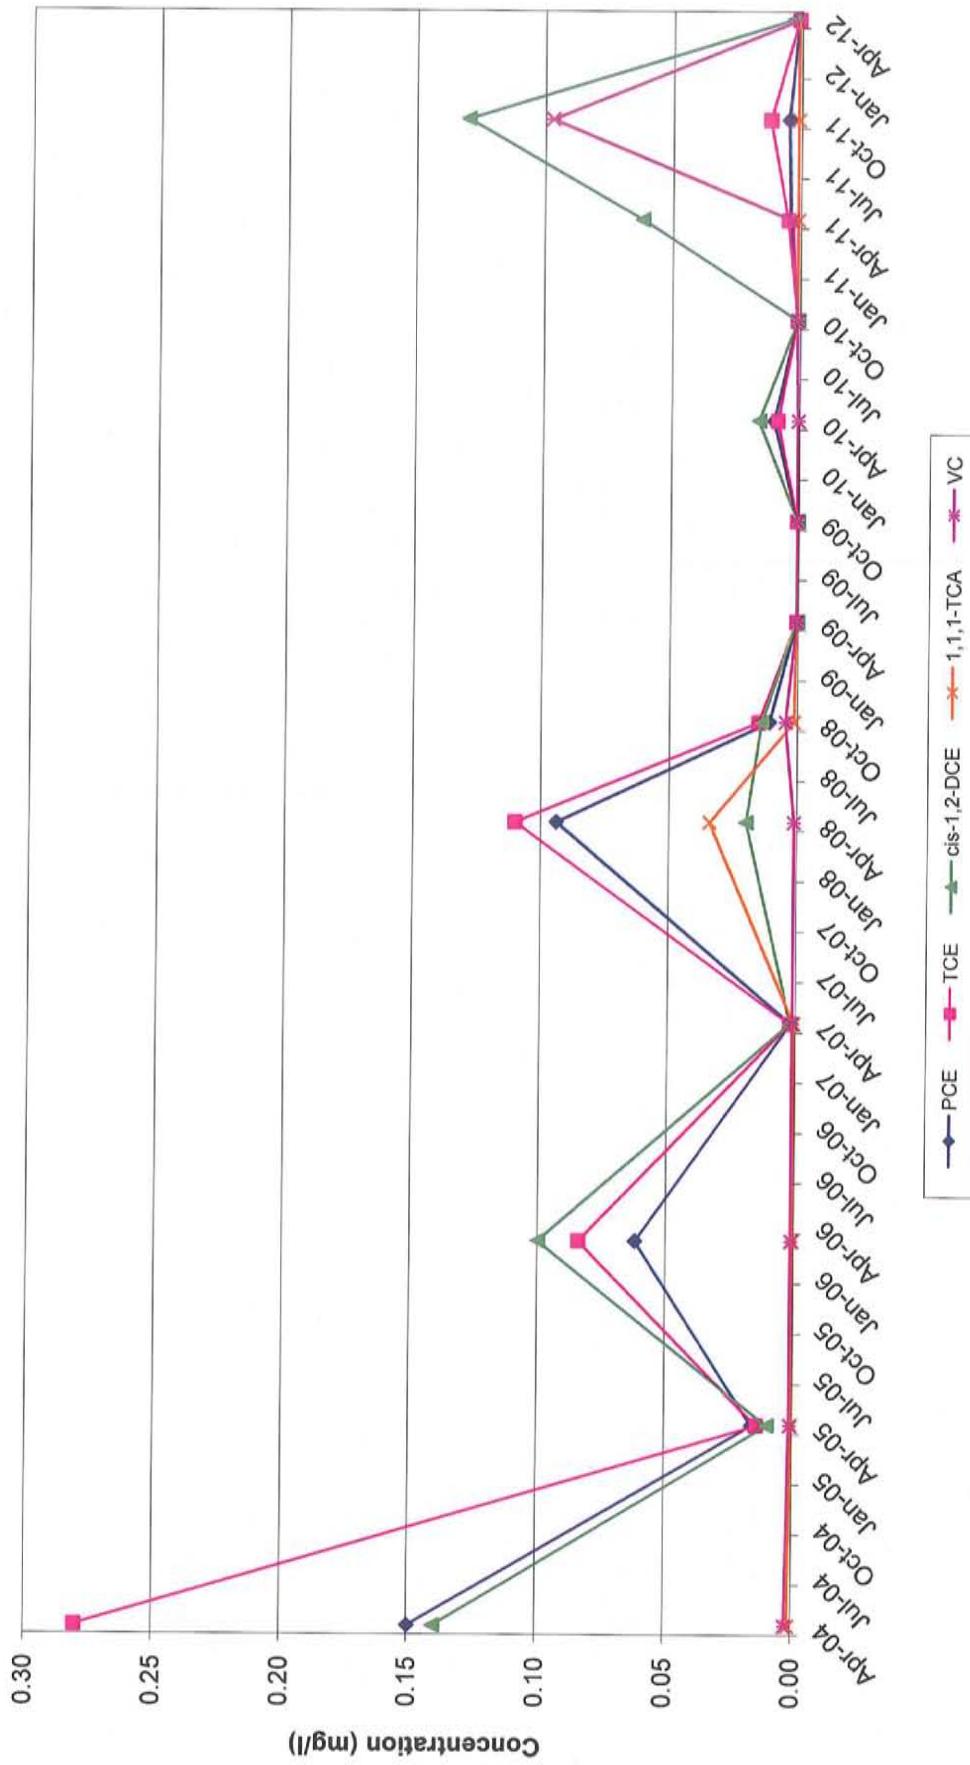

Notes: MW-8 is a shallow overburden well located in the parking lot east of Buildings 6 and 9.  
 See end of appendix for additional notes.

VOC Trends in Well MW-009  
 Former Varian Facility Site  
 Beverly, Massachusetts

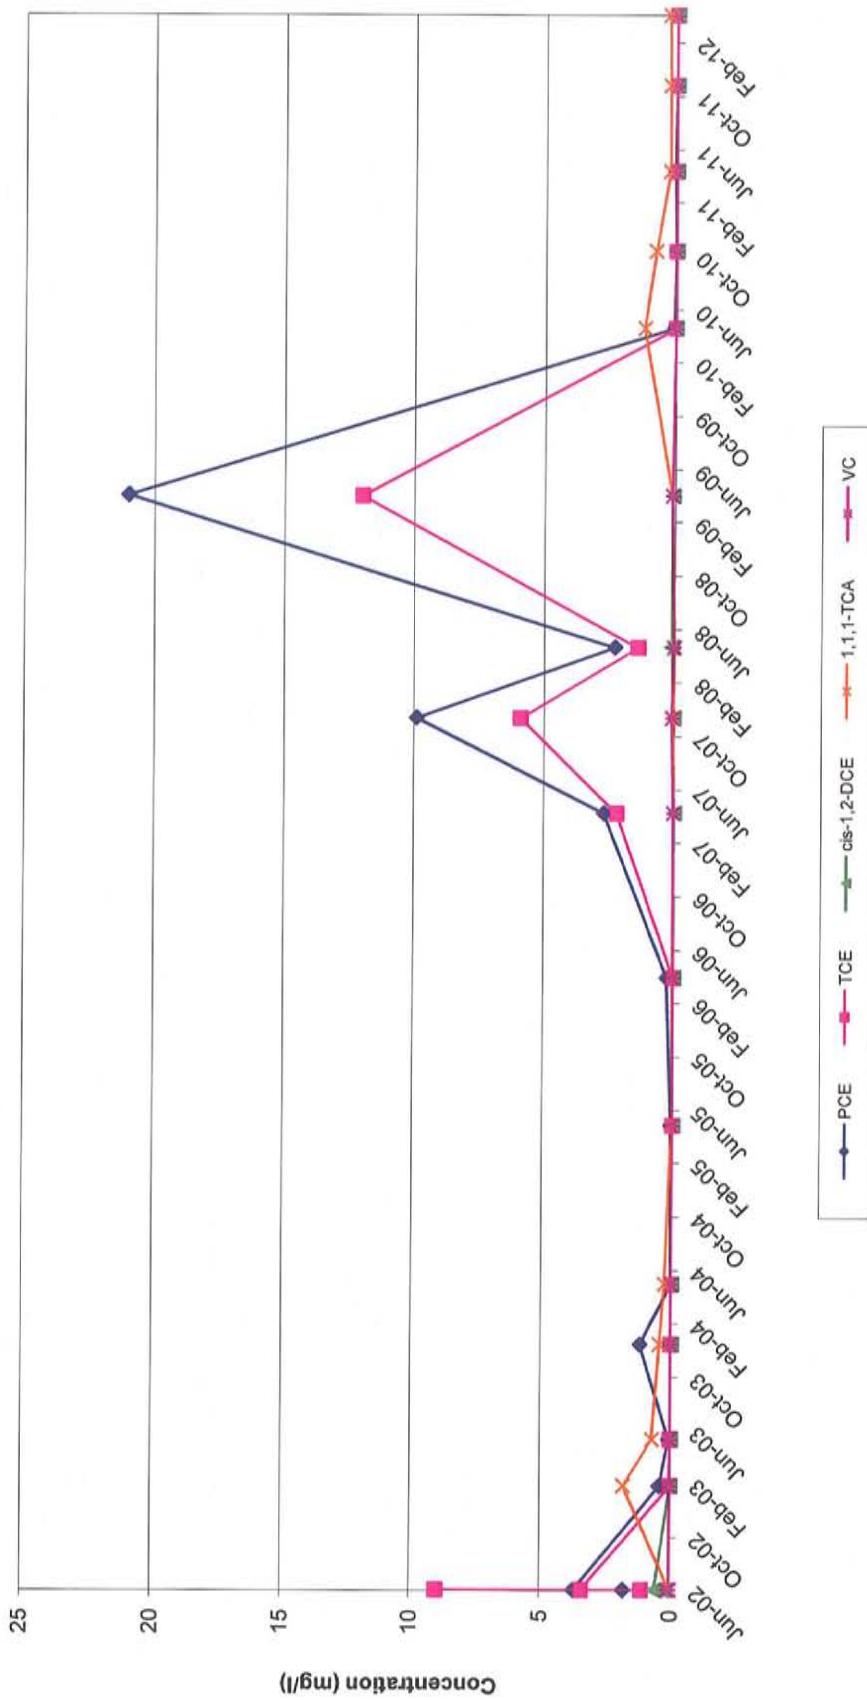

Notes: MW-9 is a shallow overburden well adjacent to Building 9 where bio-injection was conducted in 2006, 2007, 2009, and 2012.  
 See end of appendix for additional notes.

**VOC Trends in Well MW-009A**  
**Former Varian Facility Site**  
**Beverly, Massachusetts**

Notes: MW-9A is a shallow overburden well adjacent to Building 9.  
See end of appendix for additional notes.

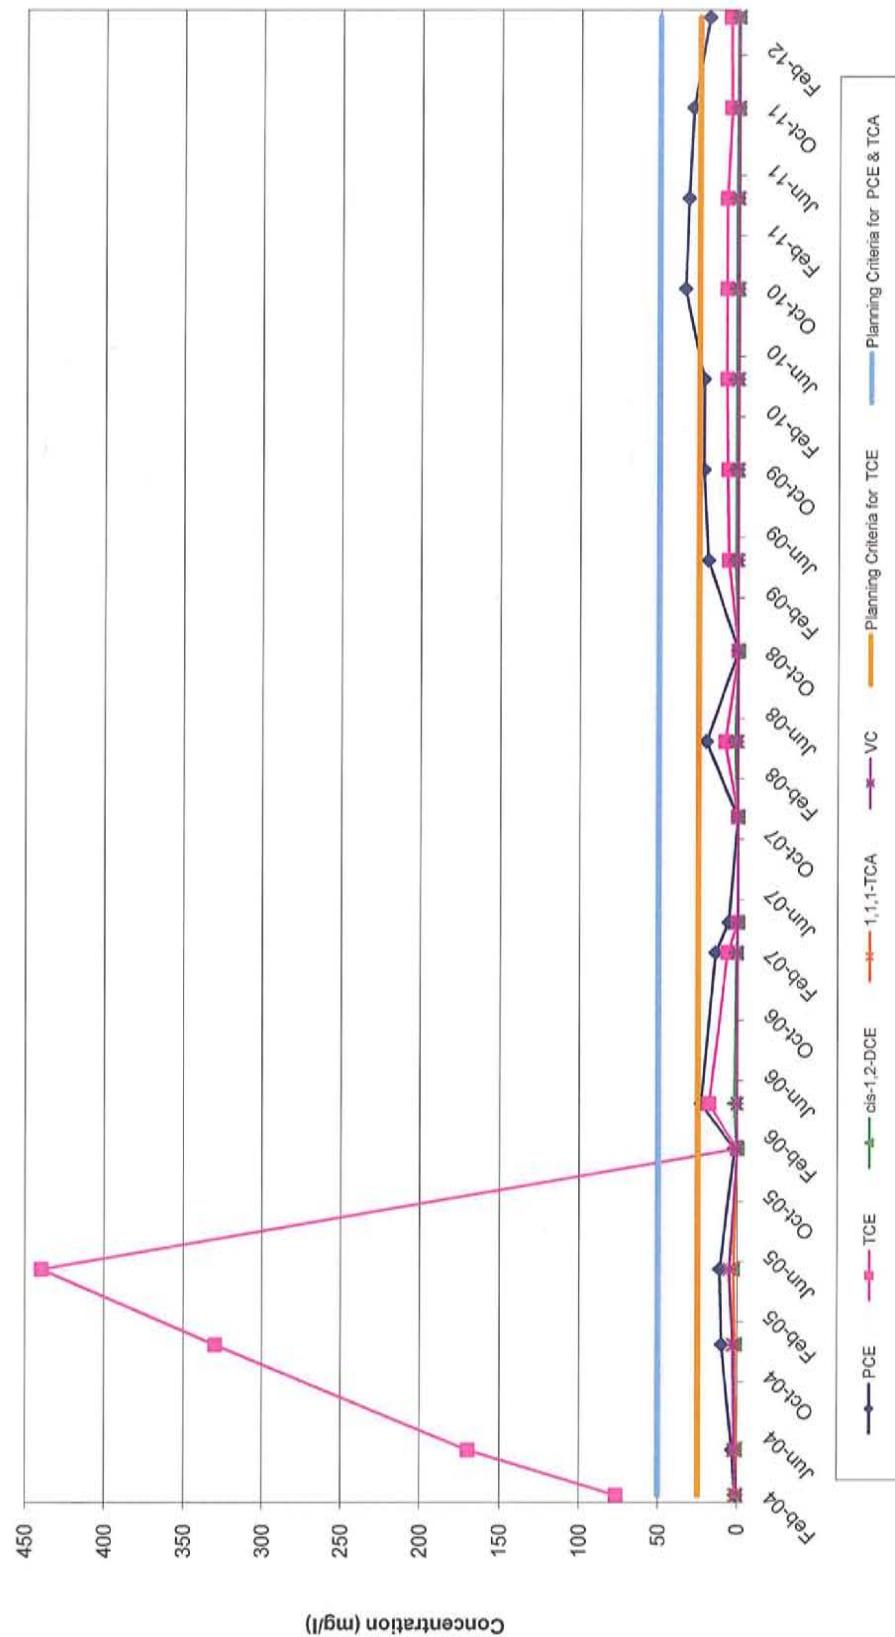

VOC Trends in Well MW-013  
 Former Varian Facility Site  
 Beverly, Massachusetts

Note: MW-13 is a deep overburden well located to the northeast of Building 3 where permanganate injection was conducted in 2002 and 2010.  
 See end of appendix for additional notes.

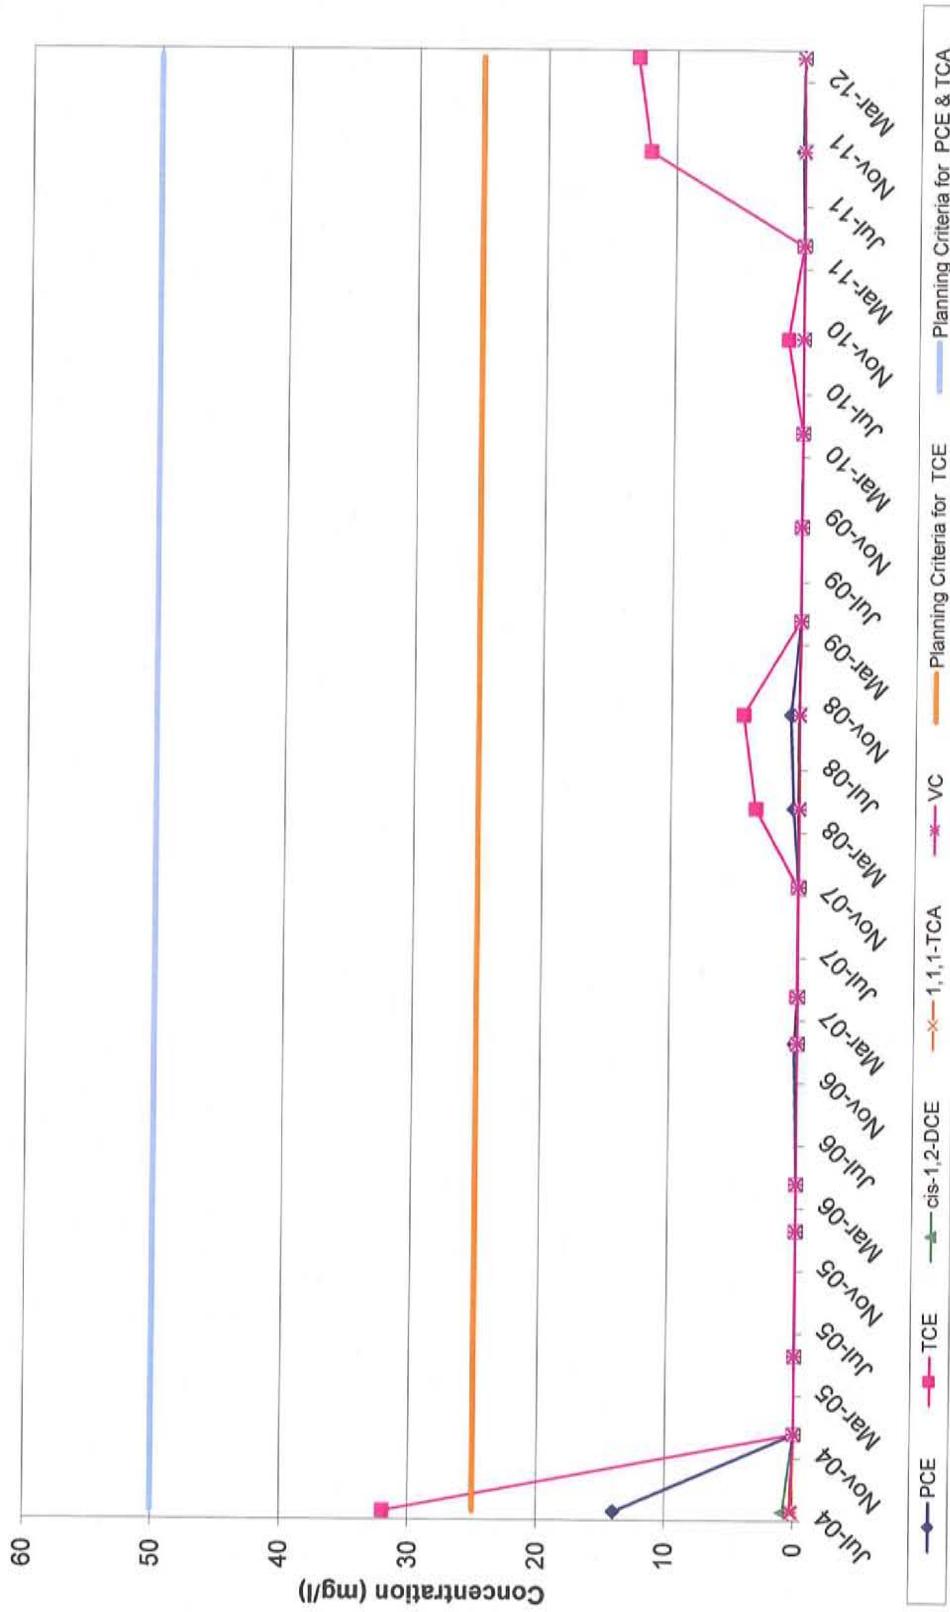

**BUILDING 5 TREATMENT AREA**

VOC Trends in Well OB-35-DO  
Former Varian Facility Site  
Beverly, Massachusetts

Notes: OB35-DO is a deep overburden well inside Building 5 where permanganate injection was conducted from 2005 to 2008 and 2010 to 2012.  
See end of appendix for additional notes.

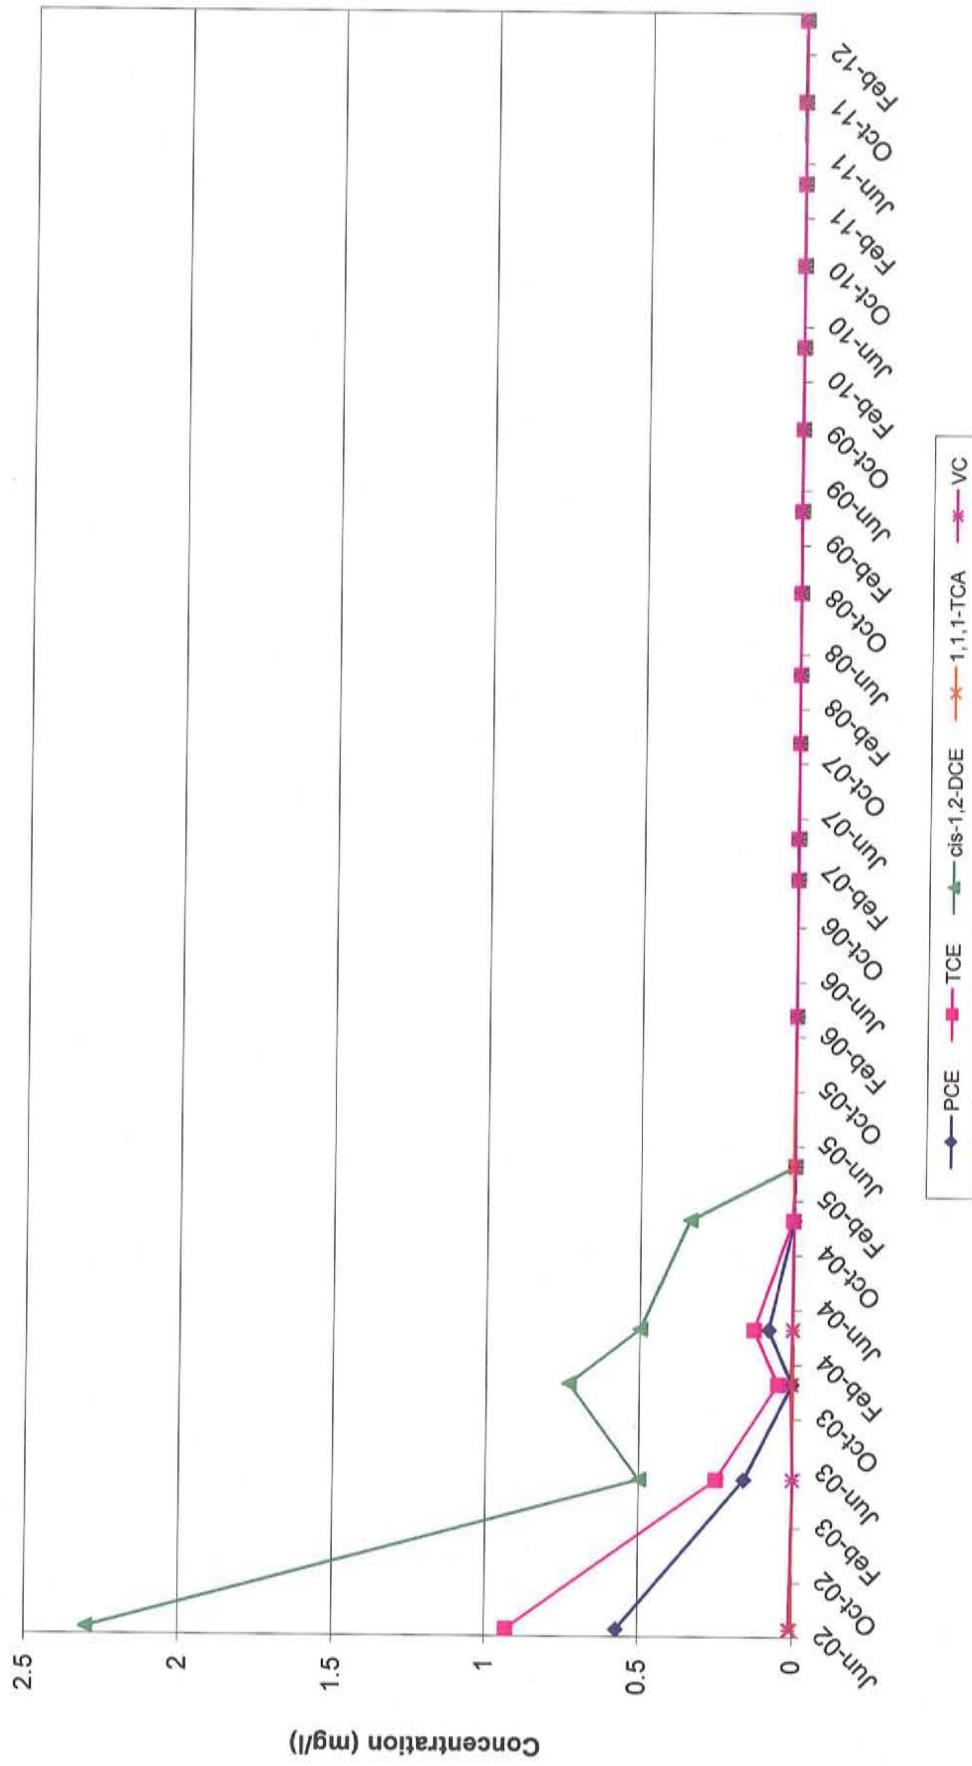

**VOC Trends in Well AP-27-DO  
Former Varian Facility Site  
Beverly, Massachusetts**

Note: AP-27-DO is a deep overburden well east of Building 5 where permanganate injection was conducted in 2004 and 2005.  
See end of appendix for additional notes.

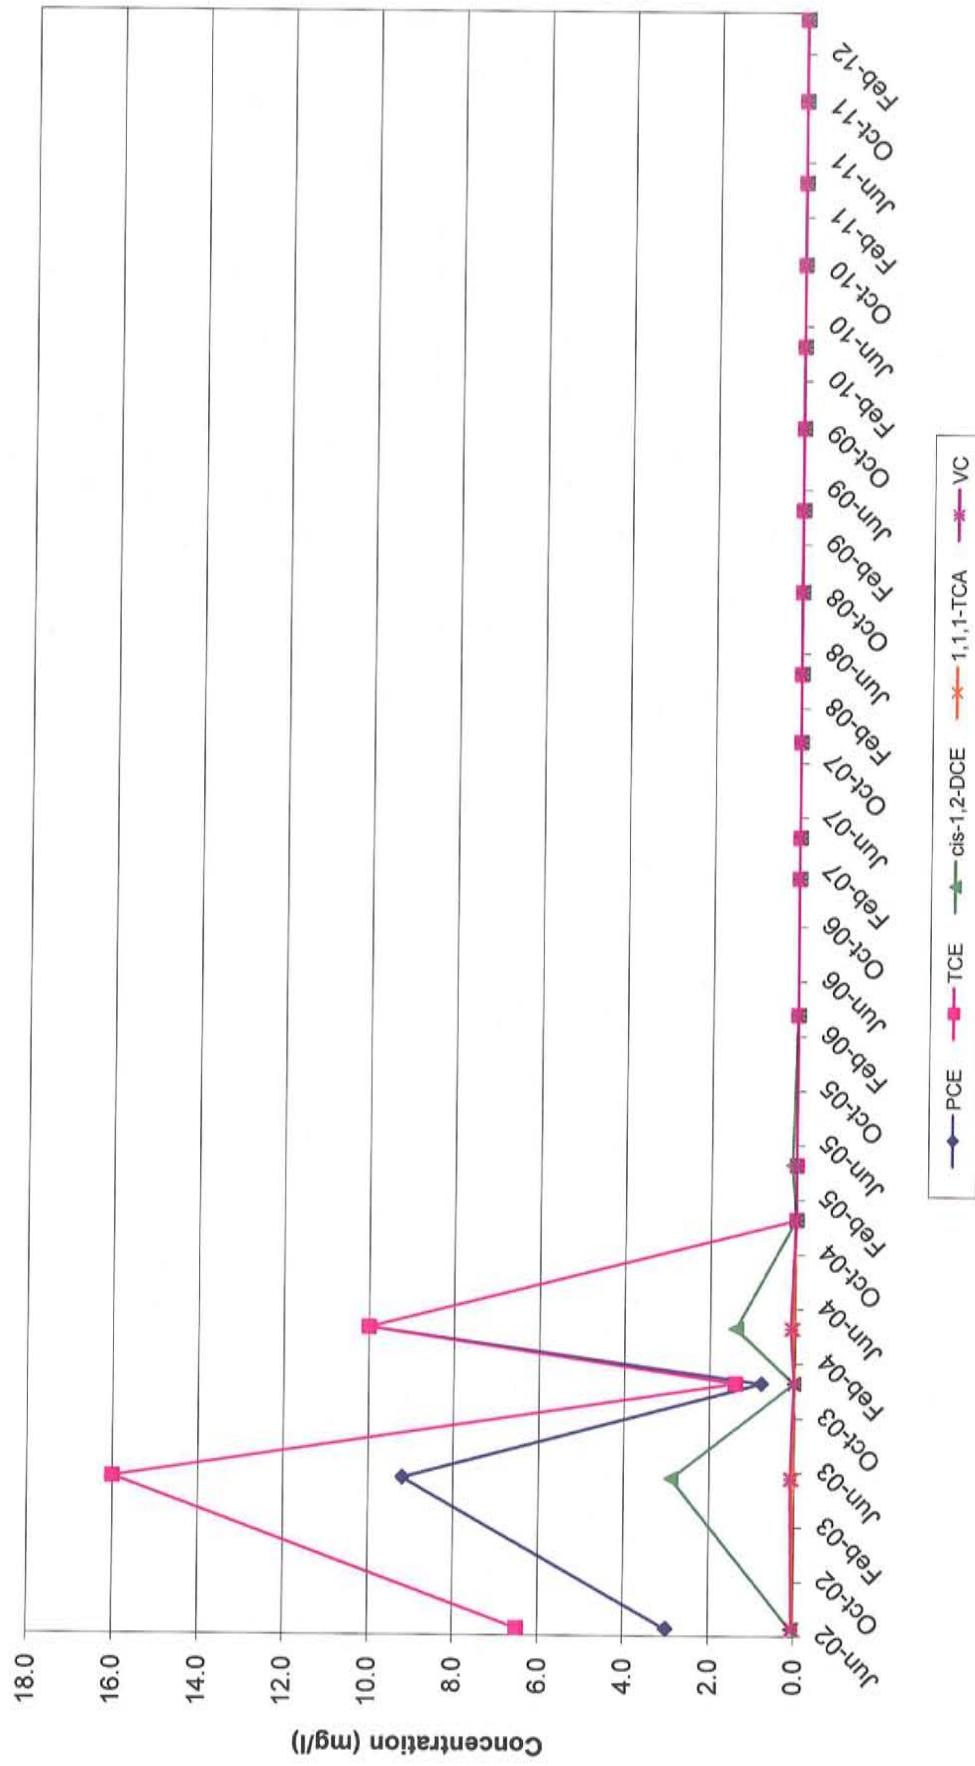

**PSL-10 TREATMENT AREA**

VOC Trends in Well CL10-BR  
Former Varian Facility Site  
Beverly, Massachusetts

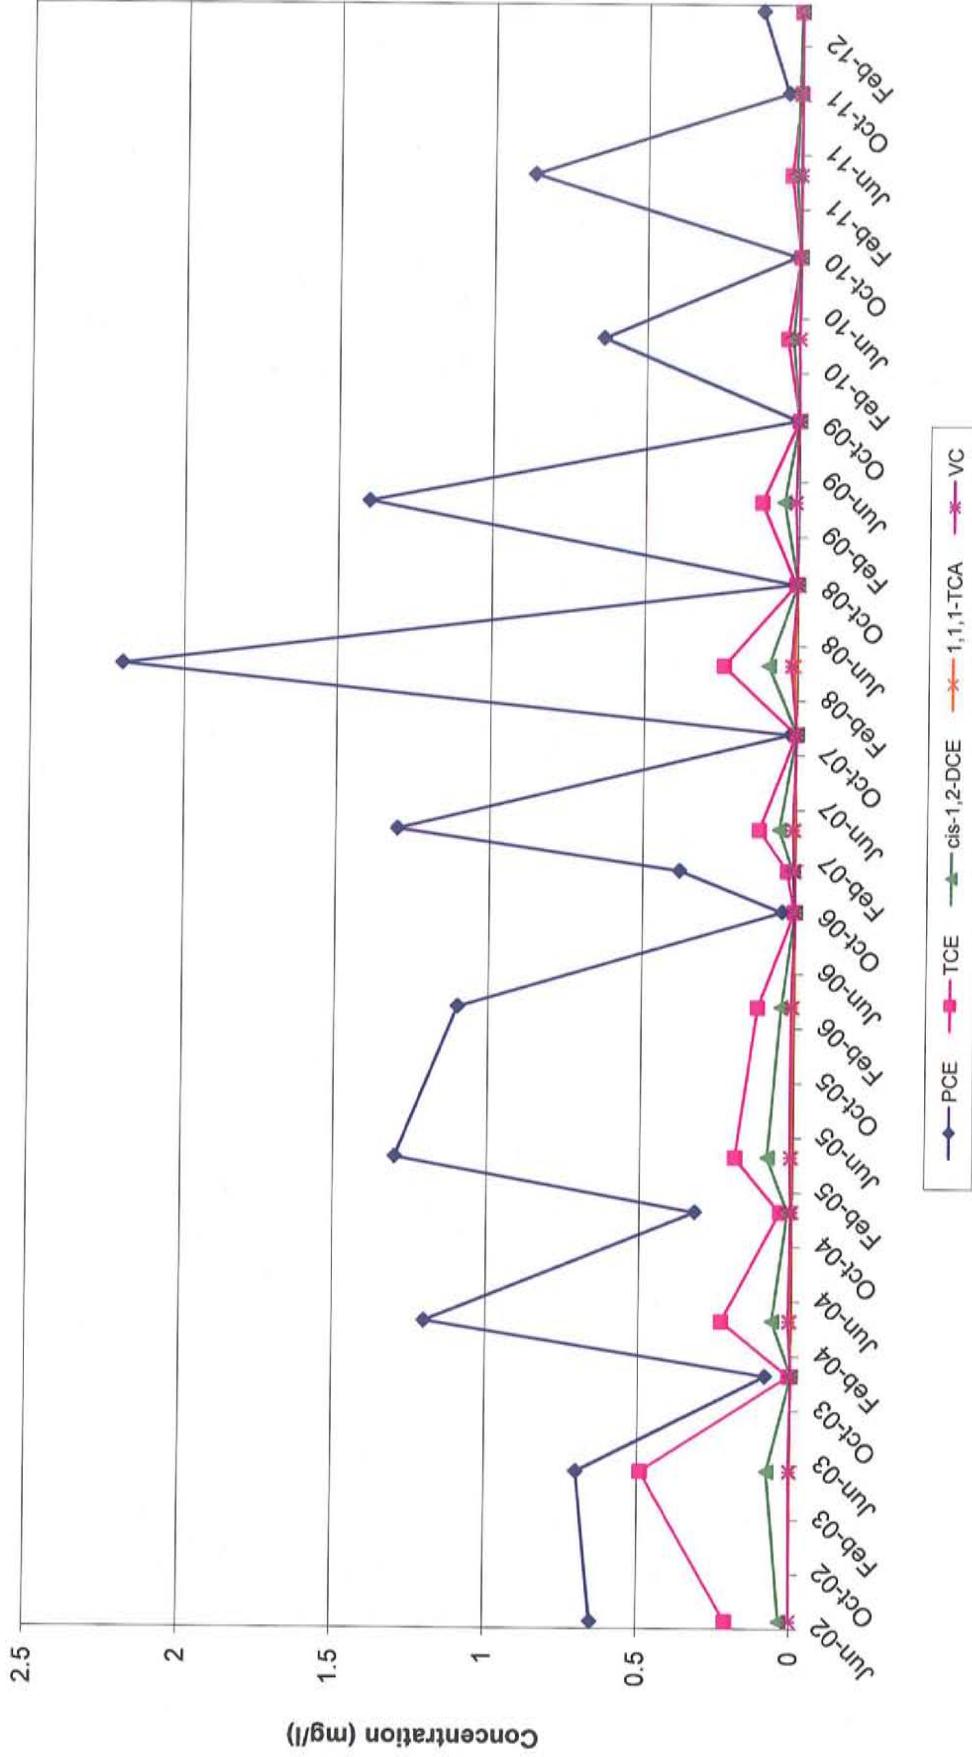

Notes: CL10-BR is a bedrock well located in the PSL 10 treatment area, south of the facility. See end of appendix for additional notes.

**VOC Trends in Well CL10-DO  
Former Varian Facility Site  
Beverly, Massachusetts**

Notes: CL10-DO is a deep overburden well located in the PSL10 treatment area, south of the facility.  
See end of appendix for additional notes.

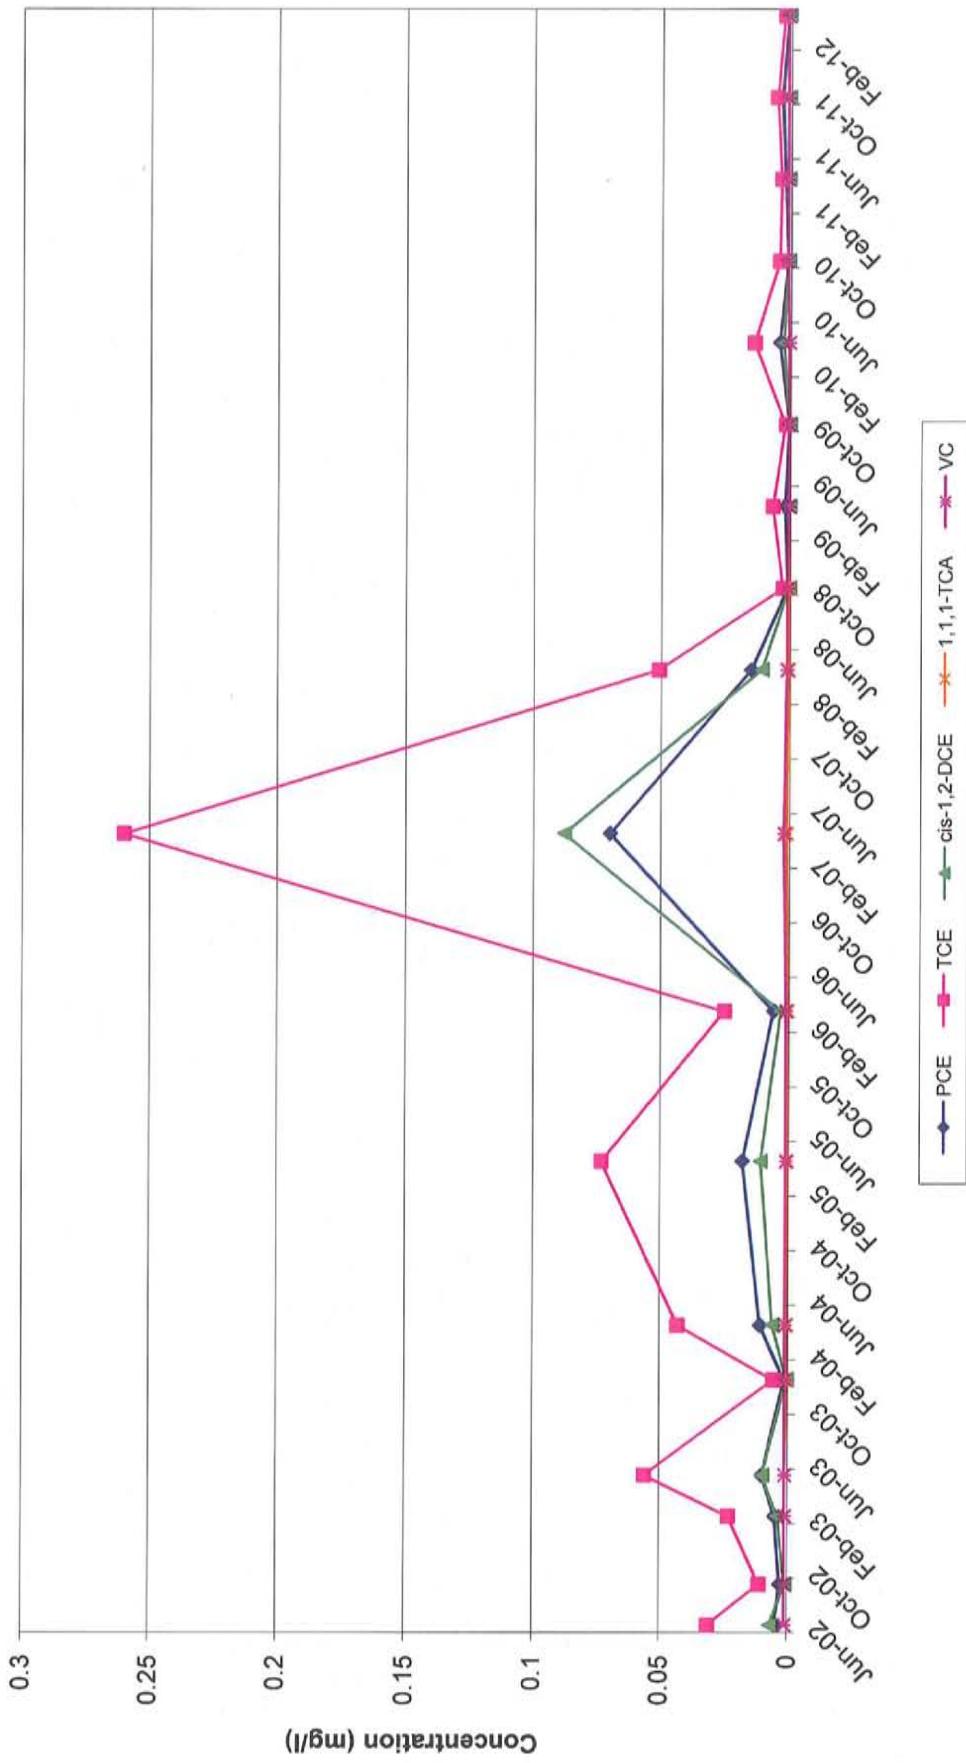

**VOC Trends in Well CL10-S  
Former Varian Facility Site  
Beverly, Massachusetts**

Notes: CL10-S is a shallow overburden well located in the PSL10 treatment area, south of the facility. See end of appendix for additional notes.

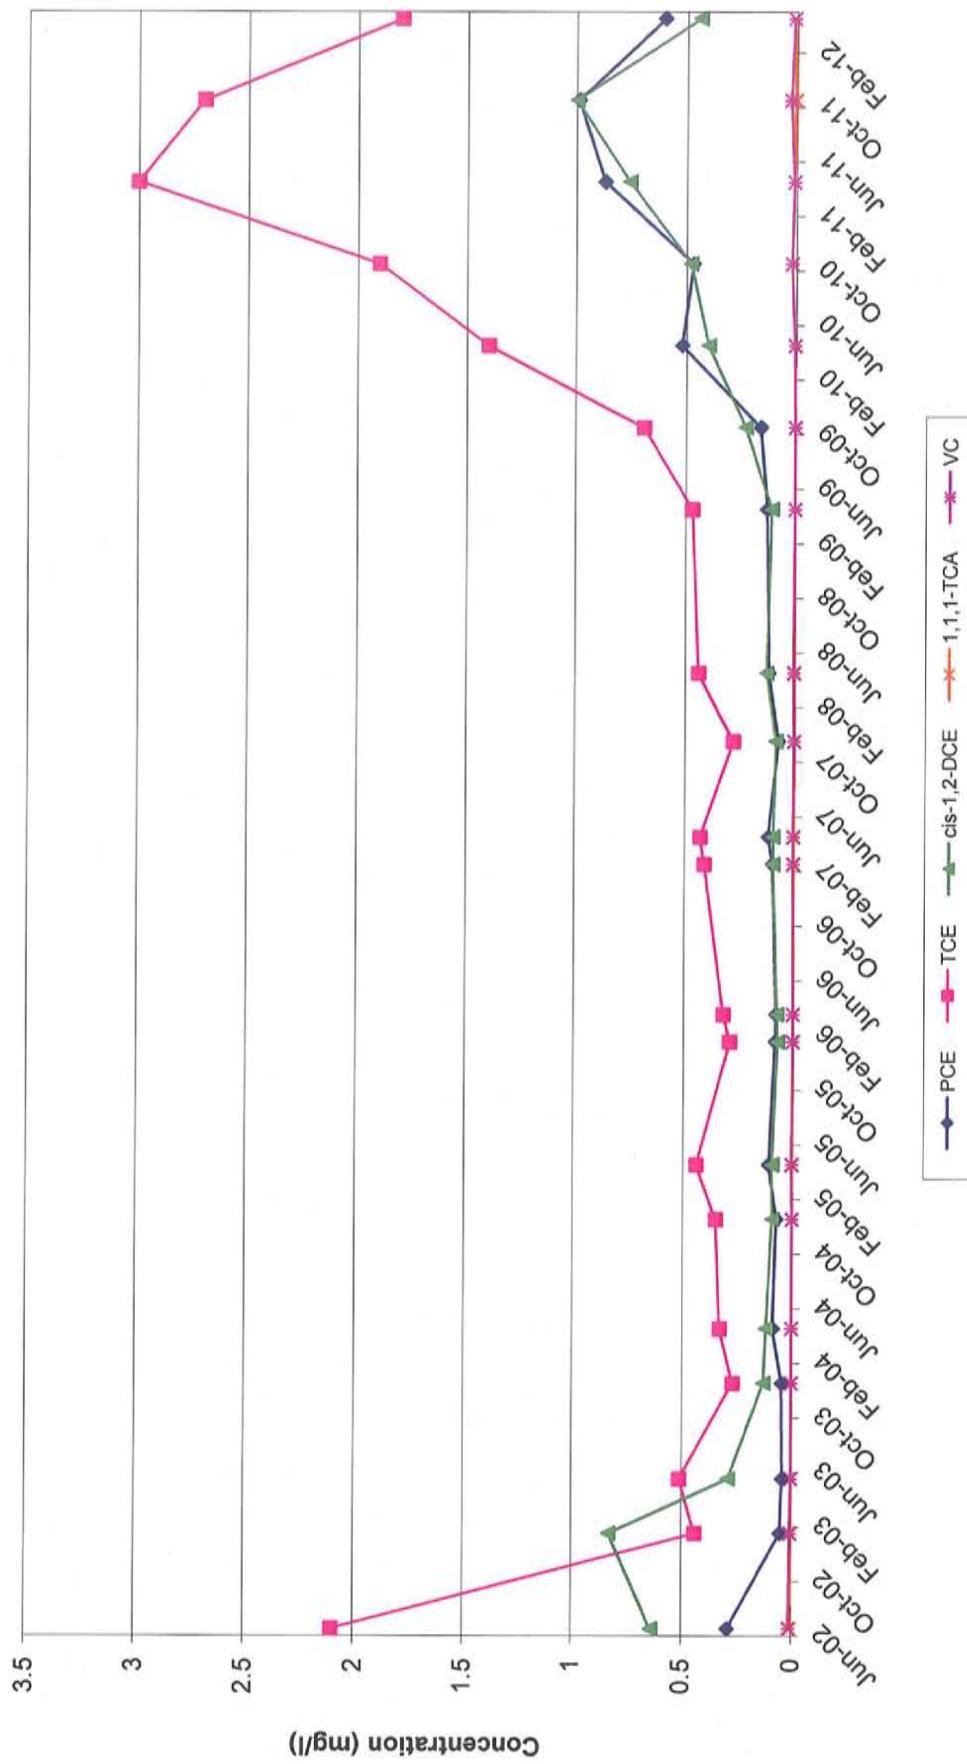

**TOZER ROAD TREATMENT AREA SOUTH OF ROUTE 128**

VOC Trends in Well OB-05-S  
 Former Varian Facility Site  
 Beverly, Massachusetts

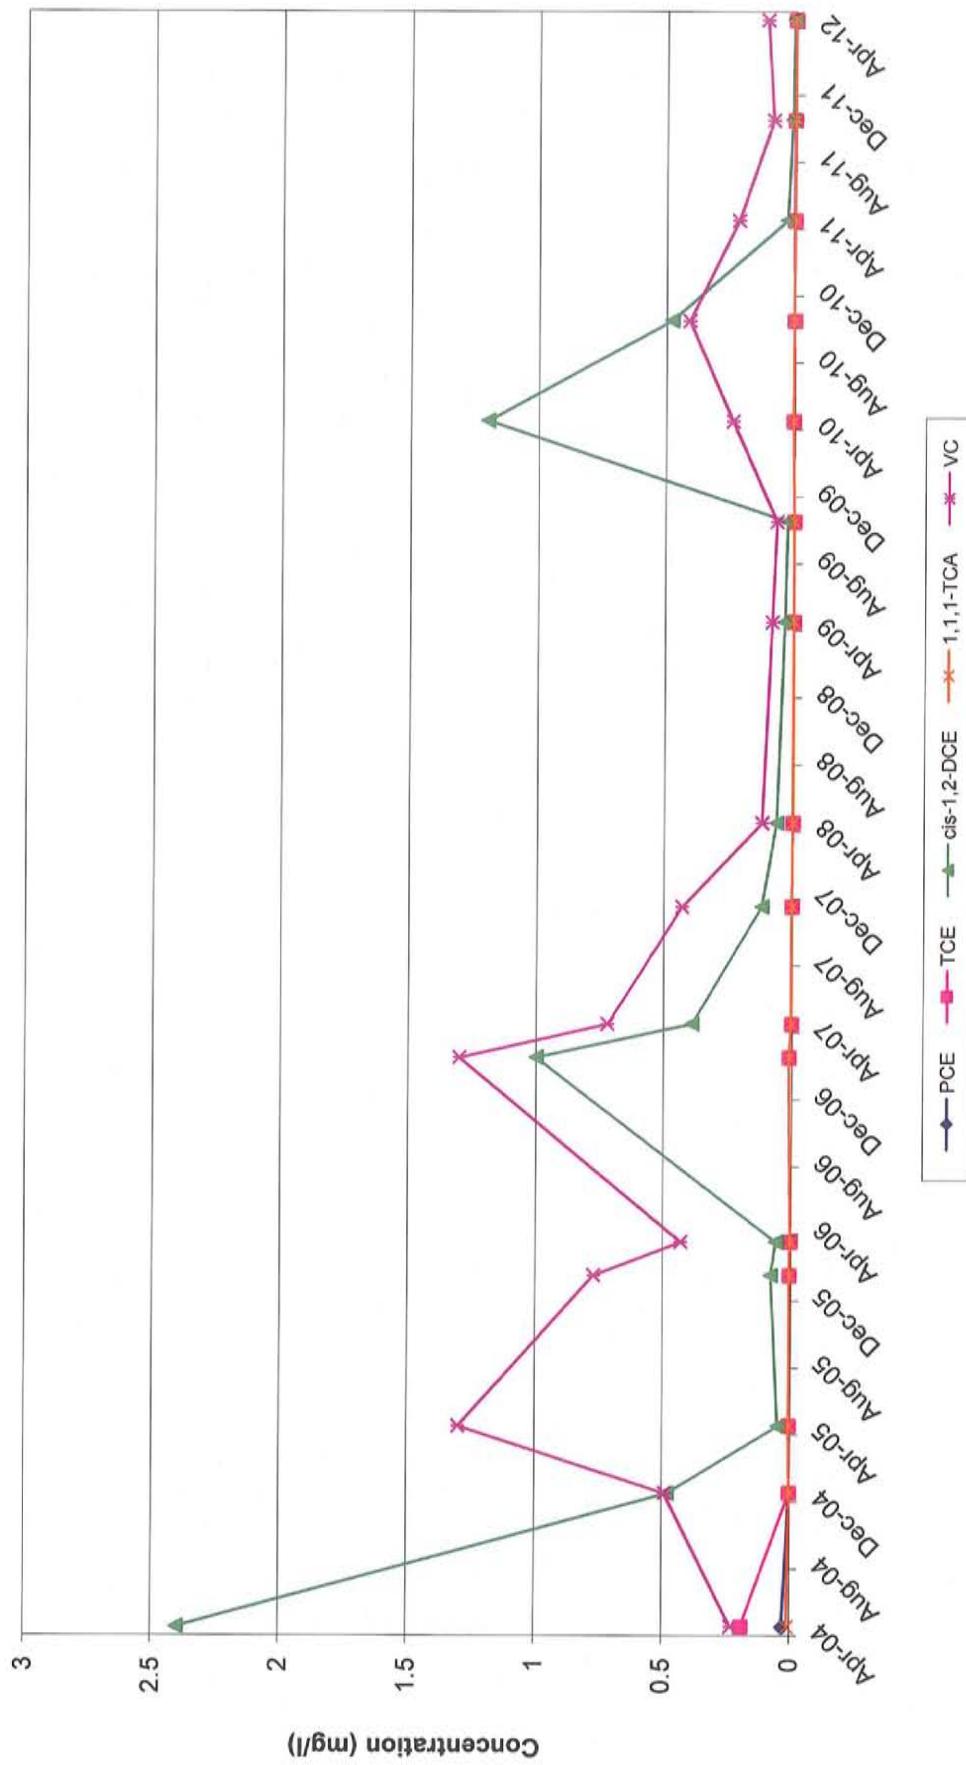

Note: OB-5-S is a shallow well south  
 of the 28 Tozer Road treatment area.  
 See end of appendix for additional notes.

VOC Trends in Well OB-05-DO  
Former Varian Facility Site  
Beverly, Massachusetts

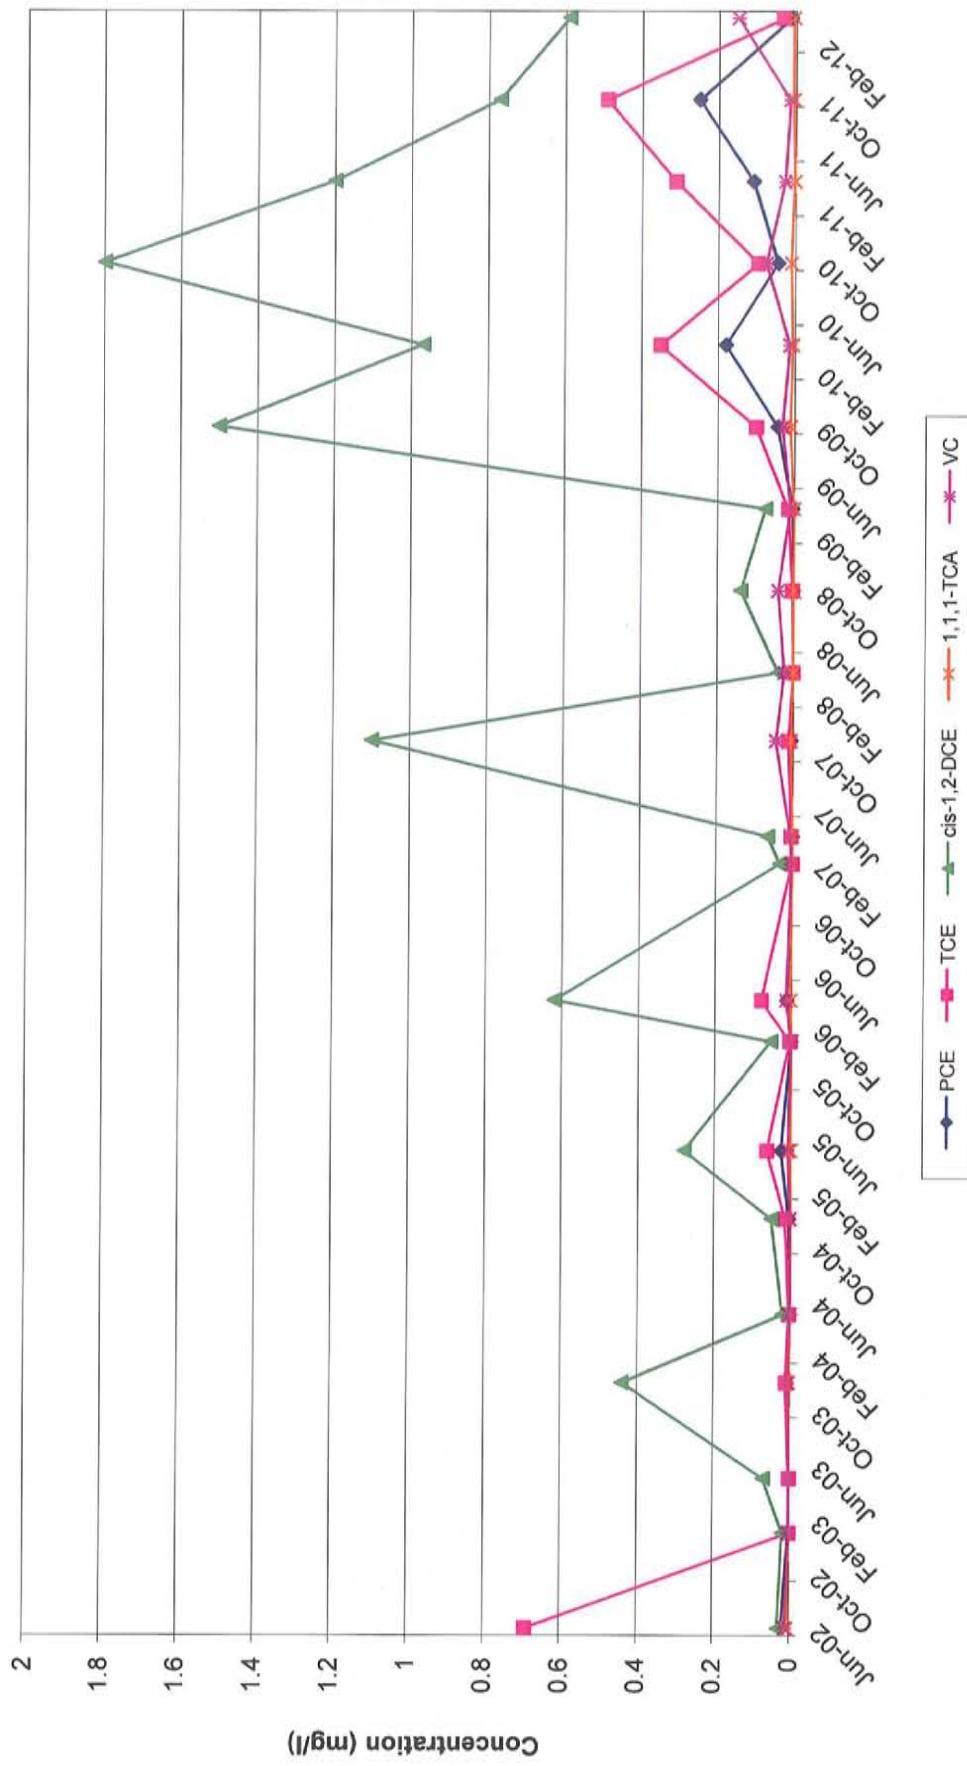

Note: OB-5-DO is a deep overburden well south of the 28 Tozer Road treatment area.  
See end of appendix for additional notes.

## VOC Trends in Well OB-05-BR Former Varian Facility Site Beverly, Massachusetts

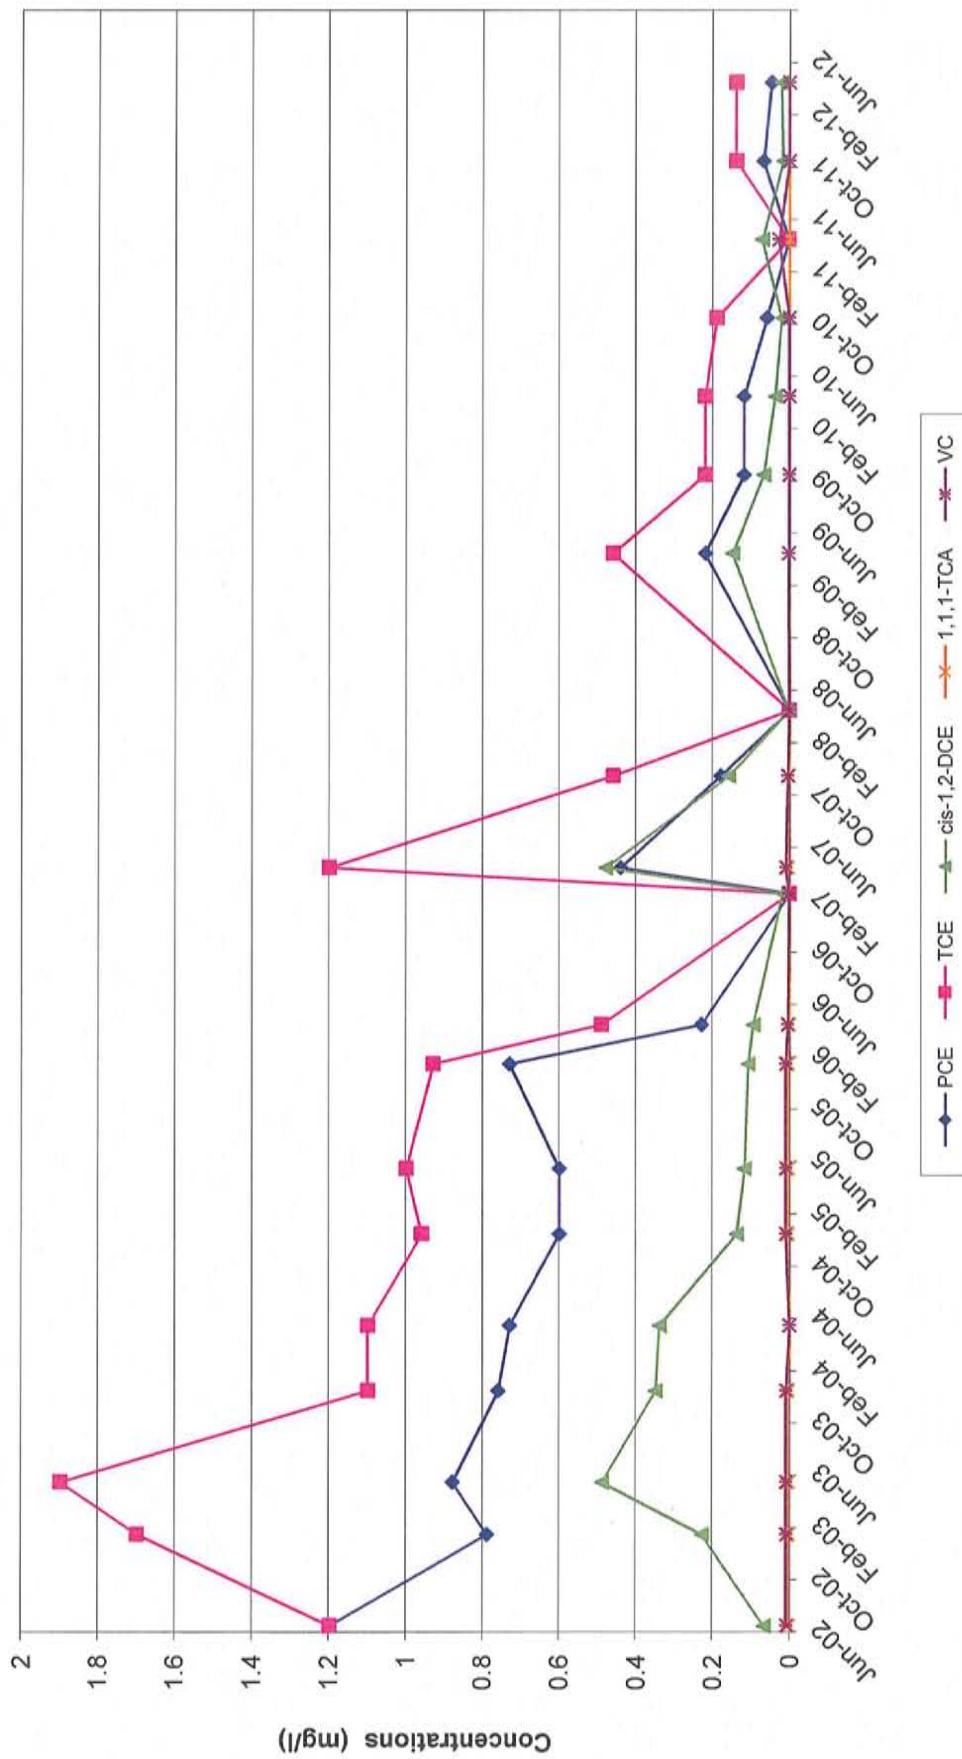

Note: OB-5-BR is a bedrock well south of the 28 Tozer Road treatment area.  
See end of appendix for additional notes.

VOC Trends in Well OB-06-DO  
 Former Varian Facility Site  
 Beverly, Massachusetts

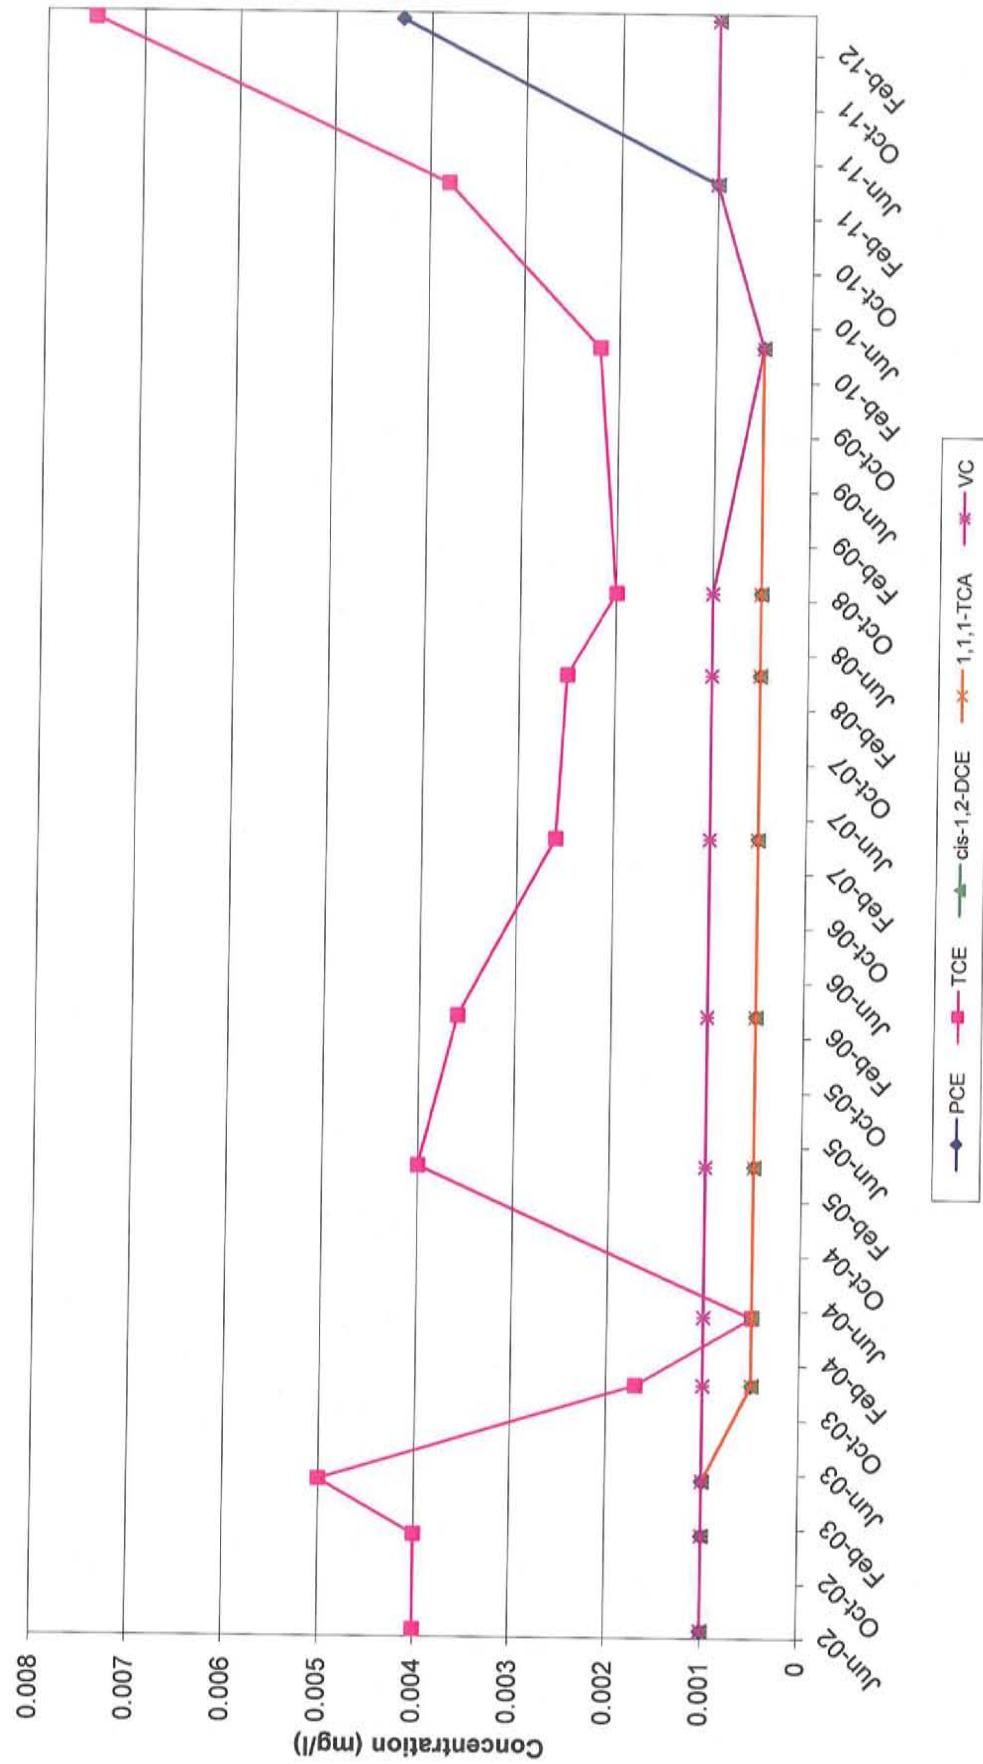

Note: OB-6-DO is a deep overburden well west of the 28 Tozer Road treatment area on Sonning Road. See end of appendix for additional notes.

VOC Trends in Well OB-06-BR  
 Former Varian Facility Site  
 Beverly, Massachusetts

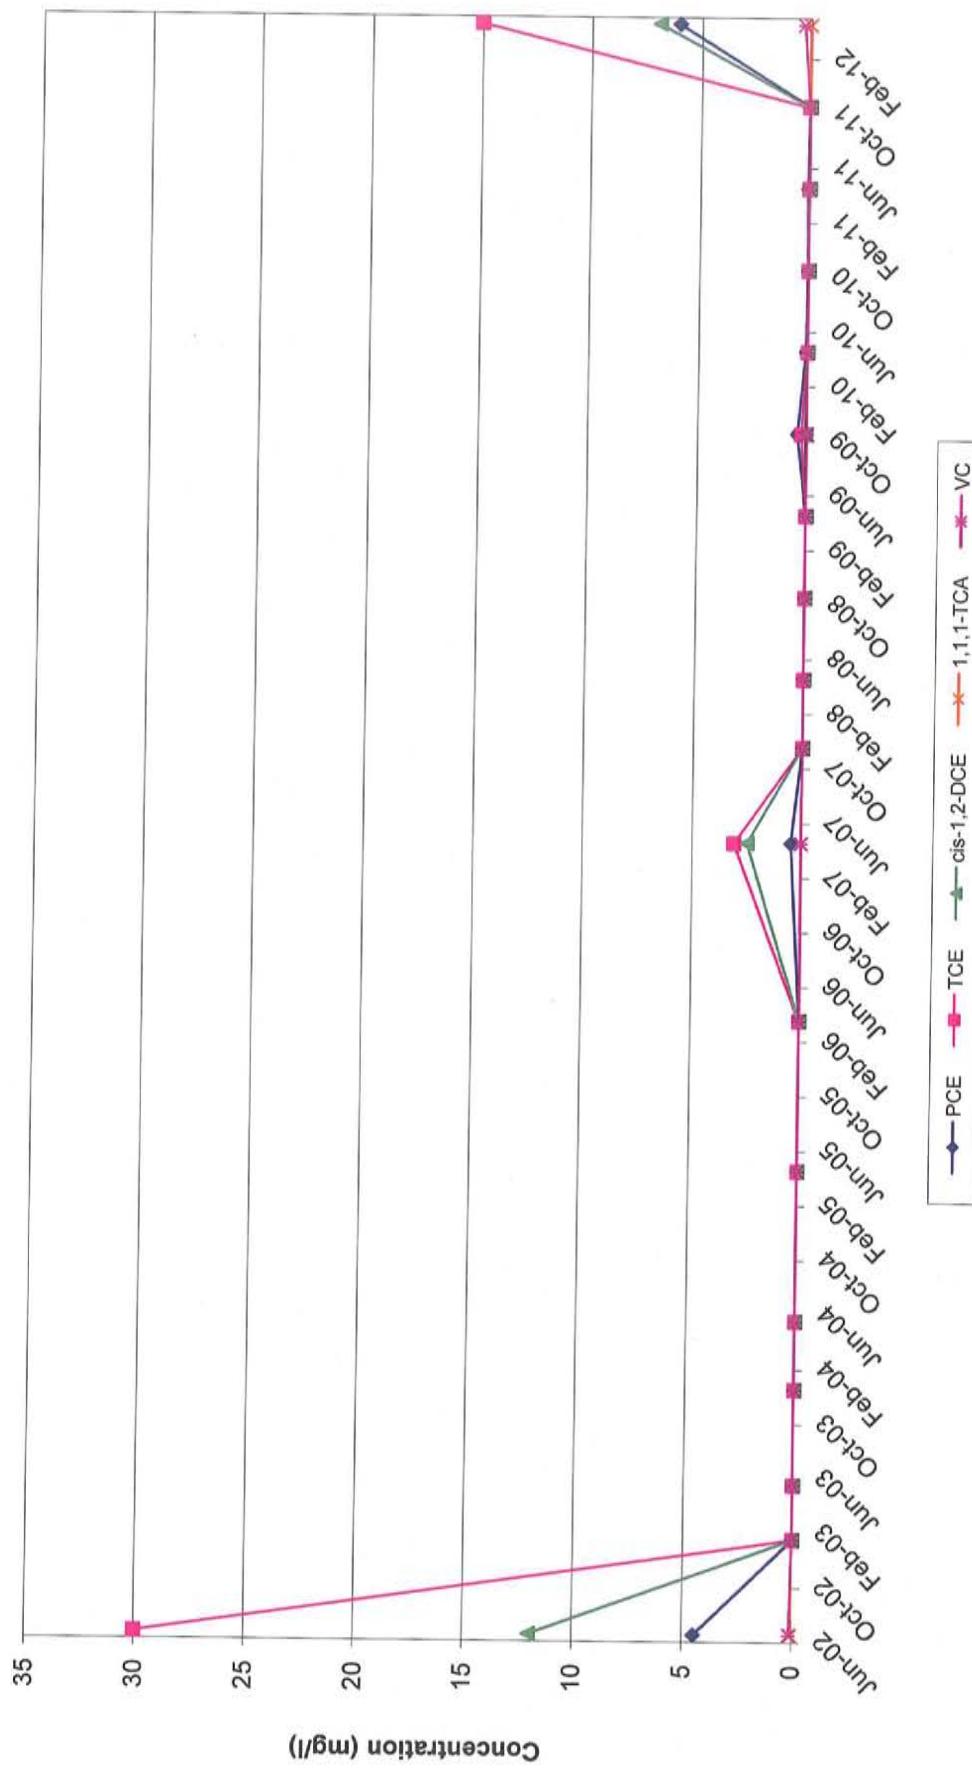

Note: OB-6-BR is a bedrock well west of the 28 Tozer Road treatment area on Sonning Road.  
 See end of appendix for additional notes.

**VOC Trends in Well CL03-S  
Former Varian Facility Site  
Beverly, Massachusetts**

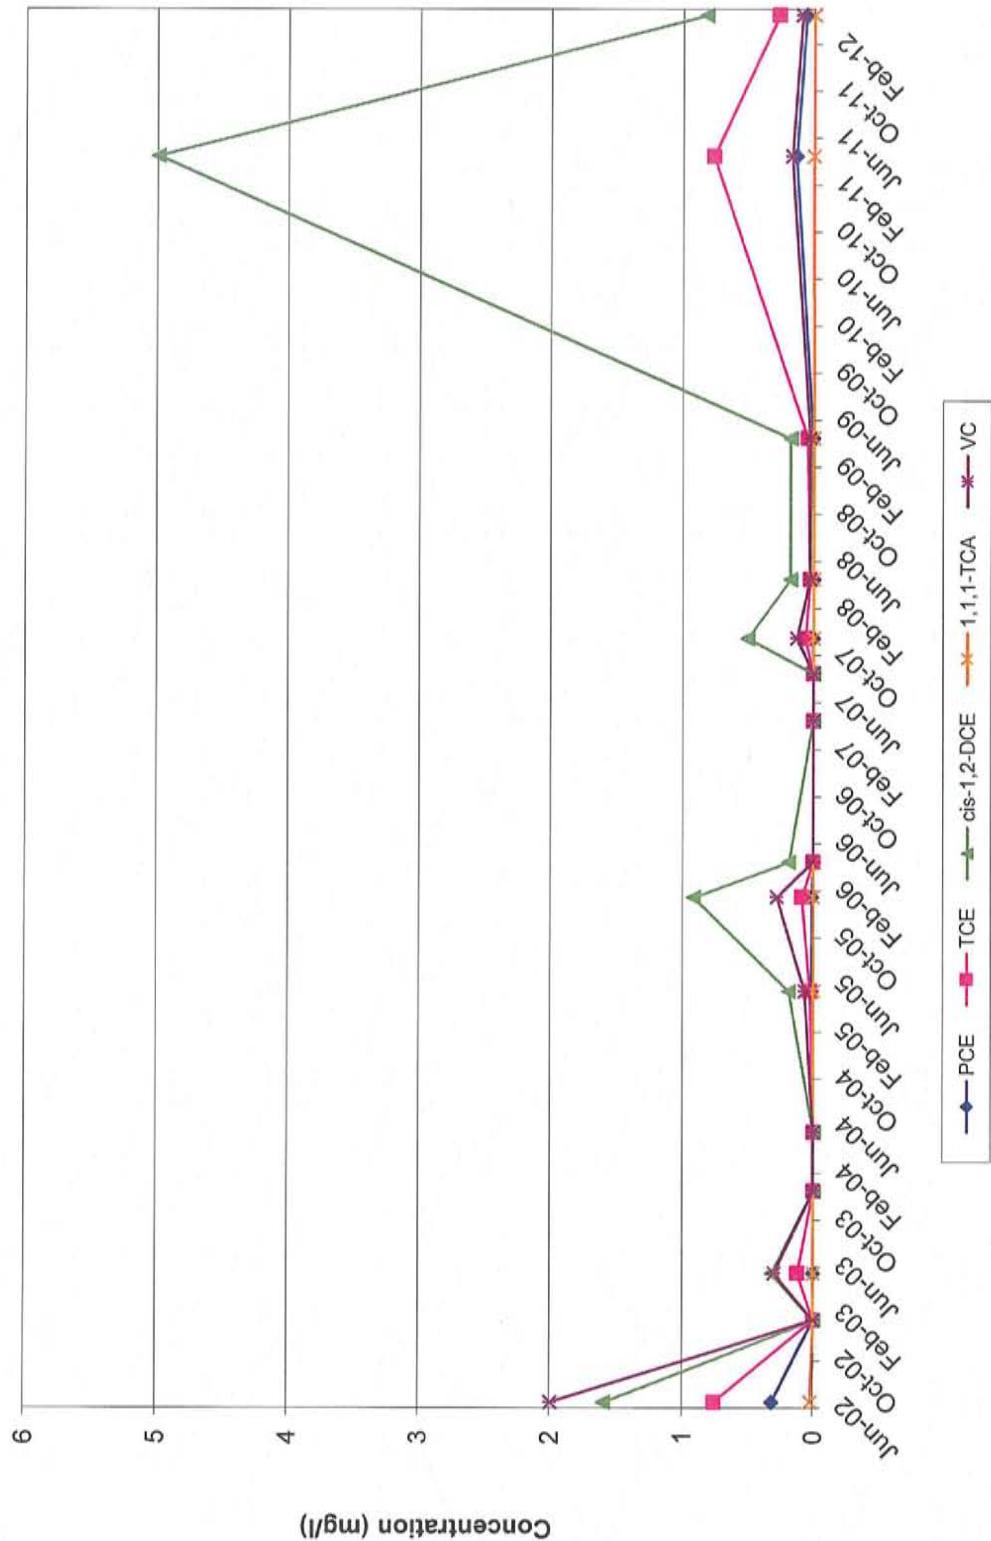

Notes: CL3-S is a shallow overburden well located at 28 Tozer Road.
