RTN 3-00362 Permit #7378

PERMIT EXPIRATION DATE

Dear Ms. Leone:

This correspondence serves as notification that your presumptively approved **Tier IB Permit Extension will expire on December 28, 2013**. This expiration date has been established by the Massachusetts Department of Environmental Protection (MassDEP) pursuant to 310 CMR 40.0751.

If you have any questions, please contact the regional BWSC Permit Section Chief at the letterhead address or by calling the letterhead telephone number.

Very truly yours,

Joanne Fagan, Section Chief Brownfields/Permits

NOTICE OF AUDIT FINDINGS AUDIT INSPECTION

Dear Ms. Leone:

On October 25, 2011 the Massachusetts Department of Environmental Protection (MassDEP) conducted an inspection as part of an audit of ongoing response actions at the above-referenced disposal site. The audit included a focused inspection of the remedial system operating at the site and a file review to determine whether necessary documents have been submitted in accordance with the requirements of M.G.L. c.21E and 310 CMR 40.0000, the Massachusetts Contingency Plan (MCP). This Notice informs you of the results of MassDEP's audit/inspection.

The field inspection focused primarily on the remedial system's discharge. The inspection involved:

- 1. On-site screening of the treatment system's influent and effluent for contaminant concentrations with portable instrumentation;
- 2. Reviewing the operation of the treatment systems for compliance with the requirements of M.G.L. c. 21E and the MCP.

INSPECTION FINDINGS

Inspection of the subslab extraction system:

The subslab vapor extraction system operating at 129 Commercial Street consists of a single regenerative blower that extracts vapors from five 2-inch diameter points installed horizontally beneath the building floor slab. Extracted vapors are directed through a moisture separator and two 200-pound vapor-phase carbon units prior to discharge to ambient air above the building roofline. According to your consultant, there are no interior pressure field monitoring points for measuring system influence under the slab. Indoor air samples are collected annually from multiple locations within the building to assess indoor air conditions. The system was operational on the day of the inspection; however, field instruments were not available to record operational data.

١.

On-site screening of the off-gas treatment system influent and effluent was conducted by MassDEP personnel using a Mini Rae photoionization detector. The results are as follows:

Background concentration: 0.0 parts per million, volume (ppmv)

Influent concentration: 0.0 ppmv Effluent concentration: 0.0 ppmv

INSPECTION OUTCOME

MassDEP did not identify any violations of the requirements applicable to remedial system operation at the site or of any requirements for the submittal of one or more documents, forms or other information required by the MCP. A copy of the Remedial System Audit Inspection Sheet is attached.

LICENSED SITE PROFESSIONAL

A copy of this notice has been sent to the LSP-of-Record, Michael Lotti, LSP# 4208.

LIMITATIONS

MassDEP's findings were based upon the certainty of the information reviewed during the audit. These findings do not: (1) apply to actions or other aspects of the site that were not reviewed in the audit; (2) preclude future audits of past, current or future actions at the site; (3) in any way constitute a release from any liability, obligation, action or penalty under M.G.L. c. 21E, 310 CMR 40.0000, or any other law, regulation or requirement; or (4) limit MassDEP's authority to take or arrange, or to require any Responsible Party or Potentially Responsible Party to perform, any response action authorized by M.G.L. c. 21E which MassDEP deems necessary to protect health, safety, public welfare or the environment.

Malden, RTN 3-0000362 100 Commercial Street Page 3 of 3
